No, it doesn't have to be *very* loose, just below critical coupling, so
that there is only on grid-current minimum.

==================================

As a non-USA radio amateur with an interest in engineering history of all sorts, I would like to say to AC6V "Thanks You" for compiling the above condensed History as influenced by the perseverance and persistence of USA amateurs, engineers and far-sighted legislators. It cannot be denied the USA has led the international field ever since the amateur radio hobby's beginings.

It is, of course, much more than just a spare-time technical hobby. Amateur communications between nationalities has oiled beyond measure, and will continue to lubricate for many years, international relationships at the vital level of ordinary citizenship.

Inevitably there will occasional set-backs. Get rid of the interference from B**h and B***r and working DX with Baghdad, Pyongyang, etc., will be worth at least another 150 sunspots on the 10m band.

```

This makes more sense, Jan-Martin. I guess my problem with the whole thing revolves around the fact that the concept of grid dipping is good for approximate use, but not too good if you have limited resources (i.e. equipment and advisors) and are trying to build a project. I used a gdo in the Navy which was considered at the time to be state of the art (I think it was the military version of the James Millen gdo), but my results did not provide much help in determining inductance values. I got all kinds of dips and peaks everywhere, some of which were not too dramatic in depth. I would suspect that much of the problem was due to outside interference at frequencies near the measurement. I ended up building a bridge and those results were a difference of day and night. Moral of the story is that the right tool will do the job, not to mention the fact that doing the project is very educational in itself. :-)

The described solution has detector near the coil, and I also did
this, but a friend of mine used it without this extra detector and
relied only on the detector inside MFJ259.
I wouldn't know how important it is to use the original version of
detector or it might just as well be on the SG output. One suggestion
is to use a series capacitor such that you could feed the detected DC
voltage back to an indicator at the SG

For Sale or Trade  : Standard C-5718DA  144/440   FM Mobile Radio
Hi I have a Standard C-5718DA Mobile Radio which I bought new. However I
just purchased another car and deceided not to install the radio in this
car....The radio is fully modified...for out of Band use...also has 800
MHz coverage....Plus can receive AM....
I have the optional Memory chip which allows for 100 memory channels per
band....I also have extra mic cables 12' and 25'.  The power output as
indicated by a Bird wattmetter into a Bird Termaline Dummyload is : 55
Watts on 2 meters and 42 Watts on 440...I have the original manual and box.
I would prefer a swap for a functioning High Frequency Radio.....However
I will consider selling the unit for cash......

Crib sheet?... ABSOLUTELY NOT!

As for code... he already has credit for 5wpm. I did try to talk him into just retaking the written for General... that question's still on the table.

Agreed. I love chess but don't discuss it here for the same reason I don't
wear a bathing suit to work.......or a business suit to the beach for that
matter.
Doug Burke

Hello, I've been out of amateur radio for about 8 yrs. My Advanced license
will expire soon and I was wondering if they still issue the Advanced
license? When I renew my license what license will I get? thank you, Richard

You'll get an Advanced license.. Though the FCC no longer issues NEW Advanced
licenses, YOU can renew an existing one indefinitely.

Exactly so, you can keep renewing and maintain the same Advanced
privileges forever.

If you wish, you can upgrade to Extra at any time by taking the
Element 4 written exam, no additional code test is needed.

Happy trails,
Gary (net.yogi.bear)

After restructuring, won't an Advanced renew, show as General now? I may be wrong, but I thought that was how it would be after 4-2000. I do know a Tech + will show as a Tech, after renewing a license.

I am having some AC line RFI/EMI here in my shack. Normal AC line decoupling procedures have not eliminated the problem. Does anyone have any info on "brute force" L/C AC line filters? Any info would be appreciated.

Tnx es Vy 73,
Don W9CW

My question is: "Why do you want to put up with a mismatch if you know you
have one?". Get a lower power pa and a decent load instead of more power
and a lousy load. Is there an application which would have a lousy return
loss and needs the pa to overcome the transmission loss? You can always
use a circulator to accomplish this also, providing the frequency band is
reasonable.

Your emi could be getting down via the air and not conducted down the power line. It also can be self induced in the equipment itself. Did you try a different locale or power system? Is your supply a switcher? Is the supply magnetically and electrically shielded? If your equipment can operate off of batteries, does the problem go away on batteries if you are in the same room? Yada, yada, yada, ...

Yeah, exactly, Steve. Like I wrote in my earlier posting, just put an antenna matching circuit in--easy way to get a decent load. 40MHz wouldn't probably be the place to try for a cheap circulator (I have the impression Paul is trying to keep things simple/inexpensive), and why waste the power anyway, when a simple matching circuit would take care of the problem.

Cheers,
Tom

I have a Yaesu FT-225RD 2 meter base. It does not have an internal tone unit
to access the repeaters. I hope to add one. Has anyone done this with this
rig? Where does the tone unit conect to the rig?
Any help would be great!

I do it all the time on the rivers in the Texas hill country. But I
run 100w.
Usually not QRP. I use car batteries, or deep cycles for power. I use
my mobile antenna, or throw a dipole up over tree branches. MK

Yes, I can certainly understand your query. A bit of background...
I'm going to be using this tx in a very "signal-hostile" environment.
It's a huge aircraft hanger chock full of stray RF and other

interference from TV cameras, microwave links, PMR radios, walkie-talkies, lighting transformers - you name it. I need to up the ERP of our control signal to overcome these - we've been swamped out by them on two previous occasions and enough is enough. However, I don't want us to appear to be using anything other than bog-standard r/c equipment in case any other competitor uses us as a scapegoat for not being able to get a signal through themselves. Hence a 40MHz dipole (for example) though desirable, is totally out of the question. Nothing we're doing here is against any rule or law, we just simply need to overcome all the background 'noise' more effectively without *appearing* to have an unfair advantage.

>oscillator and power amplifier.

Indeed. This is nothing to do with audio frequency.

>As for Paul's question about a recommended transistor: you didn't say
>as I recall whether it's to be a linear amplifier or a class-C stage,
>and if it's class-C whether it's to be amplitude modulated or not.

I thought class C would be the best way to go, really. The input
signal is already FM so an additional power stage shouldn't affect the
signal information adversely as it would had it been AM or SSB. We're
just simply seeking to up the power of a carrier wave, effectively.

>Those are important considerations. Some RF transistors are
>specifically rated with respect to the output mismatch they can safely

Well, maybe there's a simple network one can build to match even a
random length of wire?

Just bought the new IC-2725E dual band radio and very impressed with it so far. I have searched the Net for any mods for this radio and have not come across any. Is there any mods available or is the rig a bit too new for mods yet.

73's all

Yep, a simple class C stage should do fine. In fact, you may find that a transistor designed for collector-modulated AM CB band use would do the trick for you, but you're on your own to verify the suitability of any particular one.
...

> Well, maybe there's a simple network one can build to match even a
> random length of wire?

You bet. To begin with, you should probably pick the "random" length to be something reasonable. If you make it very long, the radiation pattern will have an incredible number of lobes and nulls. Try to keep it less than a wavelength. You MUST have somewhere for the return current to go...some groundplane or counterpoise. A simple "L" network can match a wide variety of loads, though it helps to know ahead of time roughly what the load is. Avoid loads which are highly reactive or are resistive but a big ratio to your nominal transmitter load impedance. If the transmitter expects to see a 50 ohm load, use a (50-ohm) SWR bridge to adjust the "L" network for minimum SWR. The more reactive your load (as a percentage), or the higher the ratio between antenna resistance and desired resistance, the sharper and more difficult the tuning will be. So things in the vicinity of 1/4 wave or 3/4 wave against a decent ground should be fairly easy to match, and things near 1/2 wave or 1 wave resonance are likely to be problematic. A large diameter "wire" (e.g., a piece of aluminum or copper pipe) helps to keep the impedance "reasonable."

Cheers,

Tom

I'll buy all this about the random wire especially the use of an L match. It is the most efficient and will get more of your power to the load with the least amount of circulating currents. With an L match, the higher impedance always has the shunt element across it. If you need omnidirectionality, then a coaxial sleeve antenna made from helically wound elements is for you. K4KEY (Doug) can probably help you. He has done a lot of commercial work at these frequencies. You can find him in the radio amateur call book.

New in the box:

IC746 Transceiver
SM-20 Mic

Man passed away before he could
use it.   Being sold by his widow.

$1,000 plus $25 shipping.

Postal money orders gets immediate shipping.
Check needs to first clear.

No negotiating.   Firm price.

Face plate still has the plastic on it.
All manuals still sealed.
High serial number.

Purchased 9-2002

I have 30 of these transformers .....$1.75ea....
or all for $45.00.....
Buyer pays for shipping ..
Transformers are PC Board pulls ...please check website ...Model DZ7 -24
12 volt @ 1.5or 3.0 amp or 24 volt @ 1.5amp
High isolation - 2500Vrms hipot
Low capacitive coupling - no electrostatic shield needed
PC pins for direct insertion in PC boards
Class B insulation - 130�C
Single or Dual primary - 115 or 115/230V, 50/60Hz
American and Canadian Agency Approvals
Check website below for more data on this type of transformer

NOW AVAILABLE

New Program " STUBTUNE.exe "

This program assists with the design of stub-line transformers used for such purposes as matching the feedpoint impedance of balanced radio antennas to the Zo impedance of the transmission line from the transmitter. This program is applicable only to balanced-pair lines. Transmission efficiency theough the transformer is calculated.

It is an improved version of program STUMATCH.exe in that it takes into account conductor loss in the transformer and is therefore more accurate when extreme ratios of (Antenna Impedance)/(Feedline Zo) are involved. Operating procedure is more complicated than STUMATCH. However it performs calculations beyond the facilities offered by the Smith Chart,

The program is peculiar in that the Zo of the feedline is not entered. All input data is variable in small up/down increments until the input impedance of the transformer is equal to the Zo of the line to be matched.
Educational.

STUBTUNE is self-contained in one small file, download in a few seconds from website below and see how it runs.

What kind of load is being switched?  At what voltage?  AC or DC?

Selection of relay must consider not only the amp rating of the contacts,
but what happens when the contacts open.  If connected to an inductive
load, some arcing will occur across the gaps. Relay contacts are rated for
switched current, voltage, and load type.  That's why the relay mfr's each
have about 3.7 gazillion part numbers for relays.

Hello
I have a FT 920 with the AM filter and FM board. The FT 920 is 100 watts HF + 6 Meters.
It has a Auto tuner and the MC 100 Desk Mic. I also Have the 3 KW Roller Inductor Antenna Tuner.
They are in good shape I will trade both for a FT 990 or a FT 1000..
I have been using the FT 920 as a backup rig. Drop me a line so we can work out a deal.
oris@dirtball.com
Happy Holidays
73 and thanks for reading

Amateur Radio Newsline™ Report 1322 – December 13, 2002

Amateur Radio Newsline report number 1322 with a release date of Friday, December 13, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio responds as a winter blizzard sweeps the Carolinas and the FCC asks a V-E team to explain. Find out what on Amateur Radio Newsline report number 1322 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS RESPOND TO CAROLINA BLIZZARD

Weathecasters described it as a clash of titans. A large cold mass of air from the North collided with a warm wet airmass from the Gulf of Mexico. The result was blizzard-like conditions in many areas of the Mid-West and along the Eastern Seaboard.

It all happened late Wednesday December 4th and all day on Thursday December 5 th. Hardest hit was North Carolina. Gary Pearce, KN4AQ, lived through the storm in Raleigh and has this first hand report:

--

The storm began moving across North Carolina as snow and sleet on Wednesday afternoon, and turned to ice overnight. With temperatures hovering just below freezing, a half-inch or more of ice coated trees and power lines. Power failed to several million homes across a wide belt in the center of the state. Telephone service had fewer outright failures, but both wired and cellular service was sluggish due to the high volume of calls.

The amateur radio story began Wednesday afternoon, as SKYWARN spotters tracked the storm for the National Weather Service. As night fell and power failed, the Red Cross and county emergency management's began opening shelters to give people a warm place to stay. Amateurs in several dozen counties staffed EOCs, shelters and Red Cross offices to assure continued communications. There was no statewide communications emergency, but ARES operators kept watch on the statewide ARES HF nets, and the state EOC in Raleigh remained on the air.

On Friday, with millions of people heading into the second night without power out and temperatures predicted to dip to 18 degrees, North Carolina Governor Mike Easley declared a state of emergency and decided to send the National Guard out to do house-to-house canvassing in 22 counties, to make sure people without phones, radio and TV knew there were shelters available.

The communications plan for the Guard units was to use cell phones to call into the State EOC and make their reports. North Carolina Emergency Management asked if Amateur Radio could provide a backup if the cell phones didn't come through. But, they couldn't pin down when or where amateurs might be needed.

John Guerriero, KG4HDT, the Emergency Coordinator assigned to cover the State

EOC, arranged for the Tarheel net -- NC's statewide ARES -- Net to operate all day Saturday. He announced on Friday's nets that operators may be needed at any time in the 22 counties covered. He was especially interested in hams with HF mobile capability.

Operators from many of the affected counties maintained watch Saturday, and Guerriero demonstrated the HF and VHF Amateur Radio operation to the National Guard coordinator at the EOC. Ultimately, however, the hams received no requests for Amateur Radio communication.

One county did work directly with the Guard. In Alamance County, ARES operators who already on duty providing communications between the EOC, the Red Cross and shelters offered to accompany the Guard, but were told that civilians could not ride in military vehicles. Instead, the county provided VHF radios left over from a recent move to 800 MHz, and the Amateurs at the EOC acted as dispatchers. Alamance County EC Dwayne Ayers, N4MIO, reported that this arrangement wasn't nearly as good as the coverage the hams could have provided, but it was all the Guard would accept.

ARES operation in some counties continued through Monday, though with much power restored and shelters closing, most Amateur Radio activity secured by Tuesday.

For the Amateur Radio Newsline, this is Gary Pearce KN4AQ in Raleigh, North Carolina.

--

As we go to air almost everyone in North Carolina have had their power restored. And the hams of North Carolina are standing by -- just in case Mother Nature has more winter storms up her sleeve. (KN4AQ, ARNewsline(tm))

**

HAM RAIO IN SPACE: ARISS MEETS IN WASHINGTON

It may have been snowing outside, but that did not stop ham radio delegations from descending on the Washinton D-C area for the Winter 2002 meeting to plan the future of ARISS and manned ham radio on board the International Space Station. Roy Neal, K6DUE, was there and filed back this report:

--

THE DELEGATES AND REPRESENTATIVES OF ARISS…AMATEUR RADIO ON THE INTERNATIONAL SPACE STATION... MET AT THE GODDARD SPACE FLIGHT CENTER, NEAR THE NATION’S CAPITOL.THEY DECIDED THAT 2 THOUSAND AND TWO WAS A GOOD YEAR FOR THE SPACE STATION. IT GREW RAPIDLY AND IS WORKING WELL.   THE SAME IS TRUE OF ARISS.

THERE WERE MANY EXCELLENT CONTACTS WITH SCHOOLS ALL OVER THE WORLD, INCLUDING EUROPE, SOUTH AFRICA AND JAPAN. GROUND STATIONS IN SOUTH AFRICA, AUSTRALIA AND HAWAII WORKED VERY WELL IN MAKING THOSE CONTACTS .

PACKET HAS BEEN BROUGHT ON LINE AND SEVERAL THOUSAND VERY SATISFIED USERS ARE MAKING THE MOST OF IT.

FOUR EXTERNAL ANTENNAS WERE INSTALLED LAST YEAR. A MONUMENTAL ACHIEVEMENT THAT GAVE ARISS THE CAPABILITY OF OPERATING ALMOST ANY FREQUENCY FROM 20 METERS UP INTO THE GIGAHERTZ RANGE.

AMONG ITS PROBLEMS, THE SPACE STATION HAS A CREW OF ONLY THREE ASTRONAUTS AND COSMONAUTS., INSTEAD OF SEVEN AS ORIGINALLY PLANNED. THAT SEVERELY LIMITS OPERATING TIME FOR AMATEUR RADIO. THE ARISS DELEGATES WERE TOLD THAT THE INTERNATIONAL PARTNERS HOPE TO INCREASE CREW SIZE IN THE NEAR FUTURE. HOPEFULLY A LOT MORE AIR TIME WILL BE AVAILABLE.

HAM RADIO ON THE SPACE STATION PLANS FOR THE NEXT PHASE CALL FOR EXPANSION TO 70 CENTIMETER OPERATION AND A SECOND STATION ON THE AIR. THIS WOULD OPEN THE DOOR TO FULL DUPLEX OPERATION. AT A FUTURE DATE IT MIGHT EVEN ALLOW STUDENTS TO RECEIVE PICTURES ON 70 CM WHILE TALKING ON 2 METERS!

WORK WILL CONTINUE, TESTING SLOW SCAN TELEVISION AND SPACE CAM HARDWARE, HOPEFUL OF GETTING BOTH THESE PROJECTS ON THE AIR PERHAPS BY THIS TIME NEXT YEAR.

MANY OTHER EXCITING, ADVANCED TECHNOLOGY PROJECTS WERE DISCUSSED. THEY WILL BE REPORTED HERE ON NEWSLINE DURING THE COMING YEAR AS THE ARISS TEAM CONTINUES BUILDING ITS HAM RADIO STATION IN ORBIT.

ROY NEAL, K6DUE, FOR AMATEUR RADIO NEWSLINE

--

Thanks Roy. (K6DUEE, ARNewsline(tm))

**

HAM RADIO IN SPACE: RS-20 IN ORBIT

Russia has a new ham satellite in space. Well, kind of. According to the AMSAT News Service, the new ham radio bird is actually an Amateur Radio telemetry beacon operating as a secondary payload of a new Russian navigational and scientific satellite. It was launched on November 28th, is at an altitude of 720 kilometers and circles the Earth every 99 minutes. Its beacons can be heard transmitting telemetary on 145.828 and 435.319 MHz. The new satellite has been officially named RS-20. (AMSAT NA)

**

SPECTRUM ISSUES: 40 METER REALLIGNMENT DISCUSSED

The just-ended preparatory meeting for next years World Radiocommunication Conference heard five ways to fix the problems plaguing 40 meter. It also heard a sixth presentatoion that would essentially leave things as they are. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--
Without going into minute detail, the five concepts differ markedly from one anotgher. League Executive Vice President Dave Sumner, K1ZZ, says in the ARRL Letter that all five options do represent improvements for Amateurs operatng in the 40 meter band, although two fall short of fulfilling the 300-kHz worldwide requirement.

The International Amateur Radio Union is on record as supporting a 300-kHz worldwide amateur allocation in the vicinity of 7 MHz. Sumner says that achieving this will require the fixed and mobile services to make room for broadcasters and for the broadcasters to change their operating frequencies.

The five proposed methods for change include a variety of transition schedules to ease the impact on these other services. Even with this Dave Sumner says that there is no guarantee that proposals will be limited to the six methods described in the report.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

More on this story is on the web at www.arrl.org (ARRL)

**

Break 1

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the W4VRB repeater serving warm Vero Beach Florida.

**

ENFORCEMENT: VE'S ASKED TO ANSWER STRANGE PASSING GRADE

The FCC's Enforcement Bureau has begun an audit an ARRL VEC sponsored test session held in Pelham Georgia on June 10th 2000. Letters have been sent to the three V-E's who supervised the test. They ask some key questions:

--
Duckworth" “The bureau seeks information as to how a candidate who has seriously failed seven tests passed the Pelham test with a perfect score on Element 2 and only one wrong answer on Element 3.”

--

The reason for the suspicion? Again the FCC's Daryl Duckworth, NN0W:

--

Duckworth: “The candidate got a license but was recalled for testing. He did not appear and his license was canceled.”

--

The three V-E's were given an appropriate amount of time to respond. In the meantime the FCC has also recommended to the ARRL VEC that it not not accept their services while the matter is under review. (FCC, RAIN)

**

ENFORCEMENT: FCC SUGGESTS THAT FIVE VE'S ARE OUT

Meantime, the FCC has closed the books on its audit of a pair of ARRL sponsored ham radio exams in Cookville Tennessee. The sessions were held back on December 14th 1999 and March 11th, 2000. And as the FCC's Daryl Duckworth, NN0W, tells us, the Enforcement Bureau has recommended that five Volunteer Examiners not be used again:

--

Duckworth: “It recommended that the services of five V-E's be no longer accepted because they knew or should have known that one of the test candidates was related to a V-E. Also, the location of one of the test sessions was not revealed in the documentation sent to the ARRL.”

--

A final decision on the future of the five V-E's is now in the hands of the ARRL VEC. (FCC, RAIN)

**

HAM RADIO TESTING: NEW TECHNICIAN CLASS QUESTIONS NOW AVAILABLE

Scotty Neustadter, W4WW, says that the new question pool for Technician class exams is out. Neustadter heads the Question Pool Committee of the National Conference of Volunteer Examiner Coordinators. And, in an e-mail, W4WW says that the committee has released a revised and expanded Amateur Technician class question pool into the public domain.

The new question pool becomes effective July 1, 2003. It must be used for all Technician written examinations given on or after that date. The complete set of questions can be downloaded in text or Portable Document File format from www.arrl.org/arrlvec/pools.html. You will need a free Adobe Acrobat reader program to view and print the P-D-F version. It can be downloaded at www.adobe.com. (W4WW)

ENFORCEMENT: FCC EXPECTED TO OK MITNICK RENEWAL

The FCC is expected to approve the license renewal of former computer hacker

Kevin Mitnick, N6NHG, if it has not done so already. The W5YI Report says that an Administrative Law Judge says that Mitnick has paid his debt to society and has been adaquitey rehabilitated to where he now holds the requisite character requirements to continue as an FCC license holder.

In rendering his decision the Judge added that Mitnick has been using his radio gear since his release from prison and it is significant that there have been no complaints filed regarding his radio operations. Also, that Mitnick's post prison conduct demonstrates that his rehabilitation can be relied upon to deal honestly with the Commission and to comply with all rules and regulations.

Mitnick's ham radio license renewal had been on hold based on his conviction for computer hacking which the FCC alluded brought with it questions regarding his fitness to remain a Commission licensee. (W5YI, ARNewsline(tm))

**

ENFORCEMENT: FCC RE-LICENSES HERB SCHOENBOHM

The former KV4FZ is back on the air but not under that call sign. Herb Schoenbohm who used tohold that call sign showed up on the air during last weekends 160 metrer D-X contest sporting the call NP2MJ.

FCC records show that Schoenbohm’s new call was issued to him on December 7th. The action to grant a new ham license comes about two months after an FCC Administrative Law Judge ruled that he now holds the requisite requirements to again become a Commission license holder.

Two years ago Schoenohm was forced off the air after the FCC refused to renew his ham ticket based on an earlier fraud conviction and the U.S. Supreme Court refused to hear his license renewal appeal. Its not known if Schoenbohm will apply for his old KV4FZ call under the vanity progam -- or -- if the FCC would grant such a request. (Numerous listener reports)

**

ENFORCEMENT: VK CB'ERS IN TROUBLE

Still with enforcement news, word from down-under that a pair of Australian C-B operators are in trouble with communications regulators. VK7HG-O reports that the two U-H-F C-B operators have been charged with breaches Australia's Radiocommunications Act for operating where they were not supposed to be.

On November 22nd, the two C-Bers were talking on the input channel to an emergency repeater. They refused to relinquish the frequency and would not move away. They were tracked from the town of Reinna to Richmond and back to Honbart by a ham radio direction finding team and the Australian Communications Authority. The regulatory agancy has already spoken with the two V-K Citizens Radio operators and is reportedly considering further action. (Q-News)

RADIO POLITICS: HAM ELECTED MAYOR OF CALIFORNIA CITY

The New Mayor of Agoura Hills California is a ham. Jeff Reinhardt, AA6JR was sworn in as the city's new leader on December 3rd. He says his theme for 2003 is “The Year of Discovery.”

Reinhardt, a public relations specialist, is best known nationally as he author of his “Magic in the Sky” column at appears regularly in C-Q Magazine. He will be starting a new quarterly column on mobiling also for C-Q.

Among those attending the swearing-in ceremony were Reinhardt's wife Melissa KD6BIT, daughter Jessica KD6ARA and son Steven K6SJR. Also present were Jim Fortney K6IYK, Doug Wynn WY6NN and a number of other local Southern California hams.

2003 marks the 20th year of cityhood for Agoura Hills but only the first time a licensed radio amateur has sat in the Mayor's seat. (WY6NN)

**

CONFERENCES: THE SOUTHEASTERN VHF SOCIETY

Turning to conventions and hamfests, a first call is out for papers to be presented at the 2003 Southeastern VHF Society Conference. This gathering is slated for Huntsville, Alabama, on April 25 and 26. The deadline for submitting papers to Dick Hanson, K5AND, is March 11. Dick's e-mail address is k5and@adelphia.net. Contact him directly with any questions. (VHF Reflector)

RADIO LAW: NEW STUDY SAYS MOBILE PHONES CAUSE ACCIDENTS

Researchers say increased cell phone use has led to more crashes caused by drivers on the phone. According to a December 2nd news report, researchers at Harvard's Center for Risk Analysis, drawing on previous research involving cell phones and government figures for auto accidents, say there is a growing public health risk from the reliance on cell phones in cars.

Data on the number of crashes caused by cell phones is incomplete but it suggested that drivers talking on their phones are responsible for about 6 percent of U.S. auto accidents each year. Translated into a human toll it means that an estimated 2,600 people are killed and another 330,000 are injured.

Researchers say that the figure was reached using current cell phone usage estimates to update a 1997 study. That study looked at phone records of Canadian drivers involved in crashes to see if they were making calls at the time.

The number of cell phone subscribers has grown from 94 million in 2000 to more than 128 million today. Opponents of banning mobile phone usage by drivers say that the benefit of car calls outweigh the possible dangers that they may pose. (Published reports)

**

EMERGING TECHNOLOGY: EMERGENCY RADIO CAN INTERFERE WITH PACEMAKERS

If you wear a pacemaker or know someone who does, listen up. A new emergency radio system could affect you. Q-News Graham Kemp, VK4BB, has the details:

--

United Kingdom and setting the pace –makers: New Scientist 23 November carry an article warning that TETRA, the two-way radio system being adopted by many of the worlds emergency services can interfere with the operation of medical devices like heart-pacemakers.

TETRA operates at 400 megs and uses pulse-rates of 17.6 Hz. Rex VK4LR suggests that anyone playing with PCM at VHF or even HF should be very careful in case someone nearby suddenly has unanticipated ticker problems!

--

The TETRA system is a European developed standard that being adopted by emergency services in 50 countries. In addition to Europe, TETRA radios are in Africa, Asia and Latin America. Great Britains' Devices Agency found that TETRA radios can upset heart pacemakers, confuse defibrillators, and stop ventilators from working. (Q-News)

**

INTRUDER WATCH: AIR ACTS ON INTERFERENCE TO 10 MHZ

A shortwave broadcaster has acted to eliminate interference to a ham band. Following a report that All India Radio was radiating spurious signals from it's 9.950 Mhz channel the broadcaster has taken the offending transmitter off the air.

All India Radio's Deputy Director said that the company decided to suspend the transmission on November 21st to investigate the cause of spurious emissions. The unwanted spurs were being heard in 50 kHz increments and included 10.1 and 10.150 MHz . (Q-News)

**

INTERNATIONAL - KENYA: NEW US-KENYA RECIP AGREEMENT
According to ZS6AKV, Kenya has new reciprocal licensing agreement between it and the United States. Under it, U-S citizens with F-C-C issued licenses may apply for and be granted Kenyan licenses.
ZS6AKV notes that it has taken the IARU close to ten years to achieve this agreement. The application form to operate in Kenya can be downloaded a www.cck.go.ke. (SARL)
**
INTERNATIONAL – UK: NEW UK-THAILAND RECIP AGREEMENT

The United Kingdom's Radiocommunications Agency has signed a reciprocal licensing agreement with Thailand. Visitors to Thailand may apply for a Thai license with an H-S-Zero prefix and long-term residents of Thailand receive a full Thai callsign. (RSGB)

**

DX

In D-X, HG4I reports that he will be on from Hungary between the 20th of December and 12th January with the special event call sign H-G-Zero 3-H-N-Y. This call celebrates the new year with the numerals Zero 3 representing 2003 and the H-N-Y suffix is abbreviation of phrase Happy New Year. Look for him on all of the H-F bands running CW, RTTY, BPSK, SSB, and FM on 29 MHz.. QSL directly with a self addressed stamped envelope to HG4I at the call book address. (HG4I)

**

THAT FINAL ITEM: THE PAPER SAID WHAT?

And finally this week, an update to a simple story that has now taken a rather bizarre twist. As in -- a reporter made part of it up and nobody caught it. Fred Vobbe, W8HDU, is back with the rest of the story:

--
Last week we at Amateur Radio Newsline brought you an item about a call by the Partnership for Public Warning to create a national wireless emergency alert system. One that could send warnings to citizens via their pagers, mobile phones or computer screens.

It sounds like a good idea, only thats not what P-P-W had in mind when it released a report based on a workshop that the group conducted last June.

You see, one of the worlds largest news services picked up the story and put it out on the wires. Several news organizations including many newspapers picked up wire service story and ran their own versions of it. We were sent a number of copies by our own listeners that appeared in their local papers. And who ever questions a newspaper article? Well in this case we all should have.

Richard Rudman, W6TIA, is a Director of the Partnership for Public Warning. He ways that when his organization learned of the story its Press Relations Director contacted the news agency. Rudman says they admitted to P-P-W that their reporter made up the lead sentence about using pagers to contact the public. And as a result, the news agency actually issued a very rare retraction, but many news organizations that ran the original story did not pick up the corrected release.

For the record, Rudman says that the Partnership for Public Warning does not endorse any one vendor or technology over another. Its goal is to promote what it terms as a level playing field. One where all warning marketplace players can be more certain of rules and standards. This says W6TIA will permit them to develop on a level playing field which does not now exist. It will also promote development of common warning terminology to better serve the publics need.

For the Amateur Radio Newsline, I'm Fred Vobbe, W8HDU.

--

That full report of last June's P-P-W workshop was released on November 25th. You can read it on-line at www.ppw.us.org. (PPW via W6TIA, W6VR)

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go this note. We have been advised that last weeks story on the Canals of Venus credited to Q-News actually originated in Bob Gonsett's CGC Communicator. There was no credit line in the Q-News audio report and we thought it was theirs. Turns out it was actually written by Bob Gonsett, W6VR.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Mert Garlick, N6AWE, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Last week the Chairman-EA1RF and the ViceChairman-EA2NO of the URE
(Union de Radioaficionados Espa�oles ~ Spanish Radioamateur Society)
have resigned.

This contribute to aggravate the chaotic economic situation of this
Society.

A great majority of members demanded a long time ago responsibilities to these Board of Chairman and studying to do a censorship motion to substitut the Chairman.

Before that censorship motion, the President has taken the door and has left fleeing, anticipating his probable defeat. Simultaneously, the Vice-Chairman has done the same. Of temporary form, the functions will have to be made by the Secretary-EA1QF, who is known as a non-operative man in the management of any type of activity.

If the URE had a very doubtful future, now it has it still more complicated:
-A load of debts with banks (more than 90.000 euro).
-An important reduction of members (at the moment only about 10,000 members).
-An high increase of the quotas (20 % for the 2003)

In addition to all that, last summer, the Board of Chairman eliminated diverse basic services for the members, decision very badly welcomed by the social mass.

According to some comments in the spanish radio forums, a great number of members is not going to pay the annual quota, because they doubt that the collected money can reach to cover the ordinary necessities of the association, and it is probable that shortly the New Board of Chairman decides to put an extraordinary quota to be able to support the numerous expenses of an association that maintains infrastructures to take care of about 25,000 members.

It is possible that we be attending to the final of a founded Association more than 50 years ago with a great illusion by a group of radiohams, and how in the last 10 years has seen how by a bad management she is destroying itself.

Contest Bulletin!!!
January 03, 2003 9:00PM Central to January 05,2003 9:00PM central
President's 50MHz and up Challenge!!!
The rules are simple... Honor system, or submit cards with S.a.s.e.
For category 1.)"Most contacts / modes",
make the most confirmed contacts on 6 meter thru visible light, and
Utilize the most modes, SSB, PSK31, SSTV, CW, etc etc.
submit your qsl cards, ( eQSL accepted also) to AB8KO,
or alternately, for your convenience, submit just your log entries
via email to: K8VC@QSL.NET
For category 2.)"Aurora",
make the most confirmed contacts on 6 meter thru visible light,
"Aurora backscatter" and submit your qsl cards,(eQSL accepted also)
to AB8KO, or alternately, for your convenience,
submit just your log entries via email to: K8VC@QSL.NET

Winner in each category will receive
a handsome frameable Wall Certificate noting their acheivement
from "The Lone Wolfe Pack High Frequency Amateur Racio Society"

For more information about the society and how to join please check out K8VC at
QRZ.com

If the guy ripped you off then I would sujest telling the newsgroupand
the rest of the ham community. But if it is just a EBAY dead bead then I
would post it again on EBAY and anytime that he trys to bid on your gear
remove him. I think that you would be able to block him from even
bidding on your stuff. I would also give him a negitive report and carry
on. I do believe that if he sent you a 8" block or a box of rocks then I
would be sure to tell everyone you could.
                                 73 and Happy holidays

While this isn't EBAY, one of the biggest favors you can do for the ham community is to post BRIEF messages -- actually this is an excellent place for BRIEF messages of this nature.

Why is this so? Simply because all these messages end up in a Google database, and you don't have to read them -- but someday you might want to access them. Consider that at some future point in time some poor soul may come across a business opportunity to do "business" with the individual mentioned below. Of course a search of the Ebay database is wise. BUT, a quick search of the "groups" using Google with the name and/or call sign will find THIS message -- in a month, year, five years from now. Try it if you don't believe me. Thus saving another from making a possible business transaction mistake.

While Ebay does maintain a database of performance, ANY additional information anywhere -- mainly negative will help tremendously in determining if I do business with the individual. I like to know as much, or find out as much as I can BEFORE proceeding - hopefully it will increase my odds of a successful transaction.

Just think of the newsgroups as the best database collection facility out there (okay so it pales in comparison to new Homeland "security" database) but for us amateurs out there, if you know how to use these tools you can gain a serious amount of info.

Hi all

I've been a SW listener for about 20 years and would finally like to become a Ham, operating on HF.

Excuse my ignorance, but what would I need to do to become licensed in the UK? Also, if I was licensed in the UK and went to work overseas, would I be able to operate there, too, or would I have to take extra exams in that country.

Thanks in advance

Andy Bown

Andy -- go to the Radio Society of Great Britain   (RSGB) page URL:
http://www.rsgb.org.uk/
In upper left under "Amateur Radio" select "Get licensed" and "What is
Amateur Radio"

When you have a UK License you can operate in the countries that have a cept
agreement or reciprocal license aggrement with the UK

See URL: http://www.arrl.org/FandES/field/regulations/io/

You can also post to the UK Amateur news group
uk.radio.amateur
That way someone near you may be able to tutor and help.
Good Luck and Happy Holidays

Don't post to uk.radio.amateur the people there will think you are 'trolling'. In ~Jan of this year the UK introduced a new scheme called the foundation course making it easier for people to get into the hobby. A lot of the older hams resent this and many of them hang out in that group.

Andy's advice on checking out the RSGB web site is good and you should also find your local club. Many clubs run weekend courses taking you through the necessary training and running the test all one go. This will get you an M3 callsign a few weeks later allowing you to use all bands except 10m with a max of 10w. After that its up to you how far you want to go.

Note the regulations may change again next year making it a more complex process!

I personally think that this is an excellent place to post these notices: many hams read them, these are the people that buy and sell these rigs, so why not have a heads up that you may not otherwise have. It is no big deal to ignore the post if you do not want to read it.

If the guy ripped you off then I would sujest telling the newsgroupand the rest of the ham community. But if it is just a EBAY dead bead then I would post it again on EBAY and anytime that he trys to bid on your gear remove him. I think that you would be able to block him from even bidding on your stuff. I would also give him a negitive report and carry on. I do believe that if he sent you a 8" block or a box of rocks then I would be sure to tell everyone you could.
73 and Happy holidays

Who cares?? This isn't EBAY. Leave him negative feedback, and get on with your life.

Lighten up Tony. If this had happened to you, I'm sure you would want to tell the world about it.

If every person starts posting their eBay negative feedback for non paying bidders here, then there would be thousands of posts a day. This isn't the place for it.

Hello:

I have a KAM XL and can't seem to get it to transmit in PSK 31.  It hears
fine and I can read the stations.  When I go to transmit the lights go on
the KAM and the Icom IC 746 but there does not appear to be any power coming
out.  Does the ICOM need to be in LSB or RTTY ?  I am using the PACTERM
software and have tried a number of settings.

Any help would be appreciated

Thanks

Ed

Hello, i'm looking for the ADMS-2 software for the FT-2600.

Please let me know if you have this software.

computers can be a very narrow audio filter, with the computer doing the digitizing and knotching, instead of doing it at the radio.
There are several good computer programs, one that I like displays the spectrum 3 khz wide, all the different cw signals, and you just put your cursor on one, click on it, and it is then decoded and all the others are left alone. the computer does the very narrow filtering on the audio signal.
Where the computer does have problems is with a sloppy fist, and sometimes it doesnt take much to be off rythem.

Hi,

I would like to know the details of a cable to be used with a Kenwood

TH22AT and a sound card for packet operation.

Or any tips as how to make one.

-Thanks in advance
VU3BIP

Have been searching, unsuccessfully, for a program that would allow me to catalog scanned images of QSO card collection. Looking for "anything" but thinking of something like the business card scanning/cataloging software. Entries for call sign, contact info, frequency, contact time/date, etc., and a window for the image of the card to appear. Naturally it would only be useful if I could then search by various criteria. A QSO logging program would work - IF there is a place for the scanned image, but haven't seen such a feature yet.
Anyone know of anything like this?
George

You can find a local dealer at
http://www.yaesu.com/amateur/map.html

Or the software and cable can be purchased for $38 at
www.hamcity.net

You WERE, of course, planning all along to do the right thing
and buy a copy instead of stealing, right?

RT systems will sell the software and cable seperately, as many hams
make their own interface cables.

Happy trails,

Hi all,

I have a fairly oldish (say 1970) GDM which can also function (theoretically at any rate) as a relative field-strength meter. However, it's pretty 'deaf' so the later functionality of it is impaired. The degree of dip when sussing out plain tuned-circuits is also pretty lousy. Taking the back off shows the amplifying section of this unit to consist of two elderly-looking tin-cased 2SB422 transistors which for some reason are soldered in circuit with full inch-and-a-half leads. Seems a bit odd given the claimed top-end frequency response of 280Mhz. Anyway, what, in the view of the panel, are the most suitable up-to-date devices to replace 'em with in order to improve sensitivity?
thanks

If those are bipolar transistors, that would explain the poor dips.

You need a tube or FET in the oscillator signal to get a good dip.

Try the ARRL handbook, they used to have a FET dipper in there.

Got a question for you guys who use a computer monitor to decode and display CW. How does the eqpt handle simultaneous signals? Do I need to null and notch out all but the one I want to copy? Seems anything that is confusing to the ear would also be confusing to the computer software.

... The last time I saw the14thdisciple he was busy stuffing 2 of every kind of animal he could find into his trousers, saying something about '40 days and 40 nights' and 'got to keep the beavers DRY!'

It's possible he ran out of room in his pants or perhaps became swamped by the larger creatures (elephants, giraffes - you get the picture?)

We've put out a call to the local hospitals but unless we come across someone with a zoo down his knickers we're unlikely to find him easily ....

Let us know if you see him? Listen to www.cytag.nl/listen.ram with RealAudio for regular updates. In the meantime we'll play you topnotch music, bring you items from Doctor Partz, Francis Walkfoot, Soloman Beasts plus comedy * chat with me, DeanoDeano and - of course - the14thdisciple!

Hugs
Deano

Glen Miller - alive and trapped beneath a GREAT BIG TUBA!

Amateur Radio Newsline™ Report 1319 – November 22, 2002

Amateur Radio Newsline report number 1319 with a release date of Friday, November 22, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ohio’s Governor praises hams for their November 10th tornado response and self enforcement really works. Find out what we mean on Amateur Radio Newsline report number 1319 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HIGH PRAISE FOR TORNADO HAMS

Some high praise for Amateur Radio from some high ranking Ohio state officials. This following last weeks deadly tornado that hit the town of Van Wert. Bill Pasternak, WA6ITF, tells us how the accolades came about:

--
Ron Moorefield, W8ILC, is the West Central Ohio ARES District Emergency Coordinator and well known throughout the area for his work in emergency communications. And on Wednesday November 13th Moorefield says that he spent time in the Ohio Emergency Management Situation Room with Govenor Bob Taft and Ohio State E-M-A Director Dale Shipley.

Moorefield tells Amateur Radio Newsline that both men stated without any reservation that it was the volunteer efforts of the regions ham radio operators that really saved the community of Van Wert on November 10th. This, through their efforts in the Skywarn program and providing early warnings. W8ILC adds that both men had a high praise for all aspects of the Amateur Radio service.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF
--

Hams across the Mid-West and into the South-Central and South East activated on November 10th.   They were active in spotter and emergency nets before, during and after numerous killer tornadoes struck the region. As previously reported, this years SKYWARN recognition Day is Saturday, December 7th. (ARNewsline(tm))

**

INTERNATIONAL - SOLOMON ISLANDS: FIRST NATIVE HAMS GRADUATE

The remote Solomon Islands now has a native ham and C-B radio population of its own. This, as the first group of trainees graduate from a special licensing class. Jeramy Boot, G4NJH, has the rest of the story:

--

On the 25th of October, the Prime Minister of the Solomon Islands attended a special graduation ceremony at which he presented 21 students with certificates marking their successful completion of an amateur radio training course. The students were the first native-born Solomon Islanders to graduate from a unique school set up by Australian radio amateur Sam Voron to bring amateur radio to the people of the Solomons for the first time. All other Solomon Island licensees were ex-patriate amateurs.

At the ceremony, the deputy head of the Australian High Commission in the Solomons presented each student with a CB or amateur radio transceiver which had been donated by overseas amateurs and CB operators, while the Minister of Home Affairs gave each student an antenna.

School radio clubs might like foreign amateur radio operators visiting the Solomon Islands are welcome to stay at the school and help the students.

Jeramy Boot, G4NJH

--

Not mentioned in the story is that Sam Voron's call sign is VK2BVS. Also, school radio clubs worldwide might like to keep an eye on 28.490MHz. Thats where the Solomon Islands ham radio school has already many contacts. (GB2RS)

**

ADVANCED PROPAGATION: THE LEONID METEOR SHOWER REPORT

A possible new record for 222 MHz meteor scatter. Ron Marosco, K5LLL, in Mc Dade Texas reports over the VHF Reflector that Tom Haddon, K5VH, worked Peter Macgregor Shilton, VE3AX, during the Leonid meteor storm on Monday, November 18th. K5VH is located in Dipping Springs Texas while VE3AX is in Cayuga Ontario Canada. Ron estimates the distance between the two stations was in the order of 1300 miles.

As for himself, K5LLL says that he made only 16 QSO’s this year. He says that’s about a quarter the number made 12 months ago.

Out West, W6GYD says that he worked 14 stations on the rocks beginning at about 08:45 UTC and ending his operation at 12:01 UTC. Not bad when you consider that he was running only an Icom IC-756 bare foot to a 5 element Telrex beam at 13 meters elevation. (VHF Reflector)

**

SELF ENFORCEMENT: BEACON QRM'S SPACE – HAM TAKES IT OFF THE AIR

Now the story of a UHF beacon with a signal that was a bit to good. And as its owner explained on the VHF Reflector, a complaint came from an unexpected source. And. as Amateur Radio Newsline's Henry Feinberg, K2SSQ, tells us it had to do with the final frontier:

--

Within 48 hours of turning up his new 1296.300 Mhz beacon in Derry, New Hampshire, Ed Parsons K1TR, received a phone call and a signal report from the Chief Engineer at the Millstone Hill Observatory in Westford, MA. This would turn out to be the first, last and only QSN report the beacon would receive.

The good news: the observatory hearing it loud and clear! The bad news: The observatory was hearing it loud and clear. So loud that the engineer told K1TR that the beacon's signal was impacting the observatory's capability to track satellites in certain directions. Also, that the recipient of the satellite tracking information, the US Air Force, would not be pleased.

It seem that the Air Force radar uses about 8 Mhz of spectrum centered at 1295 Mhz. They use an 80 foot dish for an antenna. The K1TR beacon was less than 30 miles line of sight from the observatory.

So the Ed's 23cm beacon is off the air while he finds a new home for it. Anyone with a good UHF site more than 50 miles from the town of Westford but still in New England, and who is willing to host the beacon, should contact K1TR by e-mail to esparsons@lucent.com

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ
--

K1TR says that a companion 33 cm beacon is still on the air. He says that signal reports are still appreciated for this one. (VHF Reflector)

Break 1

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the Southcoast Radio Amateur Network serving Los Angeles California.

(5 sec pause here)

**

ENFORCEMENT: FCC SAYS YES TO SCHOENBOHM

The FCC is granting the application of Herbert L. Schoenbohm for an Amateur Radio station license and a General class operators license.

According to the W5YI Report, the decision was adopted by Administrative Law Judge Arthur Steinberg on October 9th as a follow-on to a May 7th hearing to determine if the former ham possessed the requisite character qualifications to be a Commission licensee. If no objections were filed with the regulatory agency prior to November 9th, this initial decision becomes effective on November 29th.

Whether or not Schoenbohm will be granted his old KV4FZ call sign remains to be seen. It has not yet been reassigned and appears to be available callsign pool. (W5YI)

**

ENFORCEMENT: NEW MEXICO STATION FINED FOR EXCEEDING RADIATION EXPOSURE RADIATION

FCC enforcement reaches the “Land of Enchantment.” This as the agency proposes to fine A-O Broadcasting $28,000 for alleged violations of the radio frequency radiation exposure limits applicable to transmitters on towers and for other rules.

A-O Broadcasting is the licensee of FM radio station KTMN in Cloudcroft, New Mexico. Amateur Radio Newsline's Bruce Tennent, K6PZW, tells us why the fine is being levied:

--

The most serious charge by the FCC says that KTMN exceeded the radio frequency radiation exposure limits in publicly accessible areas. The FCC maintains that measurements taken by the agents showed that operation of KTMN’s transmitting antenna at only 40% of its authorized power created radio frequency radiation fields which exceeded the exposure limits for the general public by more than 300%. That engineering snafu will cost them $10,000.

Failure to install E-A-S equipment brings another $8,000 assessment while not having a main studio is another $7,000. Lastly, failure to have what the FCC calls an adequate transmission system control is a $3,000 fine.

It should be noted that this is the first case in which the Commission has proposed a monetary forfeiture for a violation of the radio frequency radiation exposure limits.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW.

--

As usual, A-O Broadcasting has the customary time period to respond. More is on the web at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-228609A1.doc (FCC, CGC)

**

ENFORCEMENT: CALIFORNIA RACEWAY GETS FINE REDUCED

Still with enforcement news, the famed California Speedway in the city of Fontana, California, has been fined $8,000 for operating an unlicensed one-watt FM transmitter on 104.7 MHz. The fine was reduced from $10,000 originally proposed, because of Speedway's otherwise good compliance record with the Commission's rules in regard to other FCC permits that it holds. This one is in cyberspace at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-02-3105A (FCC, CGC)

**

THE WEB: UK HAM ASKS HELP IN LOCATING E-MAIL PIRATE

A United Kingdom ham says that he did not originate some nasty e-mails bearing his name and he needs your help to find out who did.

Brian Jones, G8ASO, of Worcester, England says that his name and callsign are being pirated on e-mail that carries what's being described as a rather distasteful message. According to the GB2RS News, Jones says that he is not the originator of those messages. Also, that he is equally appalled by their content.

Since e-mail can originate anywhere in the world and is very hard to trace, G8ASO is asking your help to track down the originator. If you have knowledge of the person responsible for the unwanted messages please e-mail Brian at bajones@worcester.demon.co.uk. Your information may be useful in an investigation that is now underway. (GB2RS)

**

WITH THE HANDI HAMS: MALIBU CAMP OPEN FOR ENROLLMENT

Enrollment is open for the Handi Hams Winter Radio Camp in the Malibu California. The session runs Sunday, March 2 through Sunday, March 9,2003, at Camp Joan Mier overlooking the mighty blue Pacific Ocean.

The Malibu California Camp is open to Handi Ham members with disabilities, and will offer numerous study opportunities to upgrade licenses and learn new communications technology . If you are interested in attending please e-mail Pat Tice at wa0tda@arrl.net. More information is on the web at www.handiham.orrg (HandiHams)

**

HAM RADIO BUSINESS: KOTT REPLACES MC CUSKER AS WORLDRADIO EDITOR

Worldradio Magazine has announced the appointment of Nancy Kott, WZ8C, as its new Editor. Kott replaces Rick McCusker, WF6O, who left the magazine on 13th November for a career in Law Enforcement with the Sacramento County Sheriff's Department.

Regular listeners will recognize Kott as a long time writer of the "Positively CW" column appearing in Worldradio. She also is the Editor of the FISTS Club magazine "Keynote." For those not aware, FISTS is the world-wide More code preservation society.

Nancy Kott is a resident of Metamora Michigan. As such she is part of a new breed of magazine Editor telecommuting to work. Worldradio Magazine is headquartered in Sacramento California. (Worldradio)

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

HAM RADIO POLITICS: MEETING TO UNDERSTAND EMC COMPATIBILITY

Ham radio will have a forum of its own at next springs IEEE International Symposium on Electromagnet Compatibility slated for Istanbul Turkey from May 11th to the 16th.

World Radio 2003 will take place in Geneva in June and July 2003. There are several important issues for radio amateurs on the agenda most of them impose a threat from various interest groups on the frequencies allocated to the Amateur Radio Services.

Realizing the significance of the threat to ham radio from radio frequency compatibility issues, the Organizing Committee of the 2003 IEEE International Symposium on EMC, has allocated a special session in this Symposium to deal with problems related to the Amateur Radio Services. This will be the last chance prior to the next World Radiocommunications Conference for ham radio to meet with key persons from the international EMC and Radio community, researchers, regulators and others, exchange views and influence the decisions.

And hams with knowledge in this area are also being invited to provide formal papers, informal papers or a presentation for the conference. More details are in cyberspace at www.ortra.com/emc2003. Just click on the hyperlink marked "Radio Amateurs". (IEEE, ANS)

**

INTERNATIONAL - CANADA: CANADIAN HAMS TO PARTICIPATE IN 5 MEGS EXPERIMENT

A Canadian Amateur Radio Club will be taking part in the 5 Megs Experiment. The Marconi Amateur Radio Club of Newfoundland, under the leadership of Joe Craig, VO1NA, will be conducting a three phase propagation experiment at approximately 5.3 Mhz from the 22nd to the 25th of November, the 20th to the 23rd of December and finally from June 20th the 23rd of 2003.

The call sign will be VO1MRC with operation planned on or near 5.260, 5.269, 5.280, 5.290, 5.319 and 5.329 Mhz. Also the possibility of some time on 5.400 and 5.405 MHz as well.

All operation will be on CW and upper sideband. For further details, contact Joe Craig, VO1NA ny e-mail to jcraig@morgan.ucs.mun.ca. (RAC)

**

ON THE NET: QCWA QSO PARTY RULES ON THE WEB

N0UF reports over the Quarter Century Wireless Associations internet remailer that the rules for the 47th Annual QCWA QSO Parties are now on the QCWA web site at. Its in cyberspace at www.qcwa.org/qsoparty.htm A 2003 Log Sheet and Multiplier Sheet can also be downloaded from the website as well. The 2003 QCWA QSO Parties will be held on April 5th and October 4th of 2003. (QCWA)

**

DX

In D-X, Albania is on the air. A DXpedition team made up of OH2BH, OH2PM, OH5BM and OH8SR arrive in Tirana on Sunday, November 17th. They set up two stations for a one-week activation of ZA1B. Their operation includes the CQ World Wide C-W Contest, with the team's entry planned in the multi-two category. QSL via OH2BH. (OH2BH)

**

THAT FINAL ITEM: GUY WIRE RETENSIONING, LAKE TAHOE STYLE

And finally this week the sad story of KTHO radio in South Lake Tahoe, Nevada. The 590 kHz A-M station was off the air for over a day recently after its AC power and phone lines were destroyed by wind, fire, and falling trees. But it did luck out in a way because its transmission tower is still standing. Well, kind of.

According to Bob Gonsett's C-G-C Communicator, the story goes this way. High winds caused trees to fall onto the guy wires of the station's 305-foot tower. Near disaster yes, but not quite.

Thanks to the Forest Service the tower did not collapse. The crew carefully cut the fallen trees piece-by-piece, gradually reducing the stress on the guy wires rather than allowing them to loosen suddenly.

Thats the good news. The bad news is that the tower is now bent. You can see what it looks like in a photo sequence taken by Bill Kingman, the Chief Engineer of KTHO. It’s in cyberspace at www.steveblodgett.com/ktho.html (CGC)

Amateur Radio Newsline Report 1320 - November 29, 2002

Amateur Radio Newsline report number 1320 with a release date of Friday, November 29, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. The International space station gets a new crew and all are ham radio operators. Newly licensed Solomon Island hams take on an emergency communications challenge and good news for a California ham. These stories and more are coming your way on Amateur Radio Newsline report number 1320 right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: NEW ALL HAM CREW ARRIVES AT ISS

The international Space Station has a new crew which plans to start operating the ARISS Amateur Radio station in about three weeks. They boarded the staton on Monday the 25th of November. They plan to be there for about 6 months. All three are licensed hams.

Look for Ken Bowersox KD5JBP, Nikolai Budarin RV3FB and Don Pettit, KD6MDT. They will use the Space Stations calls ... RS0ISS over Europe and NA1SS for the United States. Contacts can be heard on the downlink frequency of 145.80 MHz.

They replace Peggy Whitson, Valerie Korzun and Sergi Treschev. Valerie, RZ3FK, was very active, on the air almost every day, while Peggy conducted many memorable school contacts. (ARISS)

**

RESCUE RADIO: SOLOMON ISLAND NEWS HAMS PROVIDE DISASTER RELIEF

We reported their graduation last week. And while the signatures on their ham licenses may not yet be dry, a group of Solomon Island hams are already off on their first rescue radio adventure to Malaita Island:

--

Thats right Roy. Q-News reports that three graduates from the Amateur Radio Training School of the Solomon Islands have gone by ship to provide emergency communications for flood affected areas on Malaita Island, near Guadalcanal. With them are with 19 tons of rice along with officials of the National Disaster Council.

These new Hams will operate a ham radio station at the Red Cross clinic on South Malaita island. They will report on the distribution of supplies to the National Disaster Council HQ in the Capital of Solomon Islands.

This is the first humanitarian deployment of the school's initial graduates. It also provides the Solomon Island hams their first real experience in helping people with radio knowledge of Amateur Radio.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

The three hams making the trip are identified as H44MKA, H44WSB and H44SF. As we go to air they should be operational from a Red Cross clinic set up on the south end of the island. More information is on the web at www.h44A.com (Q-News)

**

RADIO POLITICS: HAM CCR BILL DIES AS CONGRESS CONCLUDES SESSION

The 107th Congress has adjourned without taking any action on an ARRL sponsored legislative measure to free Amateur Radio of land use restrictions commonly known as C-C and R's. The ARRL indicates it plans to try again when the 103rd Congress convenes early in 2003. (ARRL)

**

RADIO AND THE LAW: CALIFORNIA SUPREME COURT SIDES WITH HAM

Still with antennas and land use, we have an update on the court battle of Mark Abrams, WA6DPB versus the city of Rancho Palos Verdes California. Amateur radio Newsline's Bruce Tennant, K6PZW, has the good news:

--

The good news is that the California Supreme Court has upheld the right of a California property owner to use antennas on his property for any reason he wants. It did so on Friday, November 15th when it denied the request of the the City of Rancho Palos Verdes to hear an appeal of the decision of the California State Court of Appeals in the case of The City of Rancho Palos Verdes vs. Mark J. Abrams. This means that the decision of the Court of Appeals is now state law.

The earlier decision of the said that Amateur Radio operators are entitled to an "exalted" status, thus giving amateurs new hope for getting antenna arrays approved. And Abrams says that there are many precedents that can be extrapolated from this ruling, but he says that the case clearly establishes that a city in California cannot tell a resident what to do with an antennas once they approve the actual array.

According to Abrams, the legal precedent applies only to California. But he says that when most states are looking to set a precedent, they will look to either California or New York. And since there is no precedent in New York on this subject, it makes California the one to serve as a guide to other states.

For the Amateur Radio, I'm Bruce Tennant, K6PZW, in Los Angeles.
(WA6DPB)
--

Abrams tells Amateur Radio Newsline that he is now going to file with the Federal Court of Appeals to declare the City's appeal of his injunction against the City of Rancho Palos Verdes as moot.

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WE4B repeater of the Palmetto Amateur Radio Club serving Miami Florida.

(5 sec pause here)

**

RESCUE: ZL1AMO REPORTED ON LIFE SUPPORT

The Radio Society of Great Britain reports that well-known D-X'peditioner Ron Wright, ZL1AMO, has been taken ill. According to Wright's daughter Terri, her dad suffered collapsed lungs while in Fiji. He was air lifted by an emergency air ambulance to Auckland New Zealand where he was initially reported to be in critical condition and on life support.
A later report from Terri Wright says that her father is currently in

stable but guarded condition. The RSGB says that Wright had been operating from Fiji as 3D2RW. Regular updates on Wrights condition are being posted to the web at www.papays.com/opdx.html (RSGB, ZL2BHF)

**

ENFORCEMENT: EX-HAM ARRESTED FOR ALLEGED ATTACK ON POLICE OFFICER

A former ham who resigned from Amateur Radio has been arrested in the hills of North Carolina following a manhunt that has lasted over a year. Steve Anderson, the ex-AA8DP, is accused of shooting at a police officer.

Anderson was a member of the Kentucky State Militia, a civilian paramilitary group, until April 2001. As previously reported, that militia group dismissed Anderson because he refused to shut down his unlicensed radio operation. (Published news reports)

**

ENFORCEMENT: ATT FINED FOR TOWER VIOLATIONS

The Federal Communications Commission has released an order imposing a $117,000 fine against AT&T Wireless Services, Inc. for safety-related violations of the Communications Act and the Commission's antenna structure rules. This action follows routine antenna structure inspections and related investigations conducted by Commission field offices throughout the country.

Before issuing the fine the FCC determined that AT&T Wireless committed seven separate violations of the antenna structure requirements as outlined under Part 17 of the Commission's rules. Included were failure to register, light, and paint antenna structures, and failure to post antenna structure registration numbers at the base of the antenna structures. (FCC)

**

ENFORCEMENT: VICTORVILLE CA PIRATE STILL ON THE AIR

Another unlicensed station has been discovered in California. According to Chris Compton writing in the CGC Communicator, he noticed a pirate operating on 90.9 MHz in Victorville while driving through the town not that long ago.

Compton, who is a Director of Engineering said that the unlicensed transmitter was taking out KGZO on 90.9 MHz in Shafter. The pirate was also heard doing commercials for his Nextel Store in Victorville.

Now here's the best part. When Compton called the unlicensed operator, the person responded that he had a "demonstration license" from the FCC and that it was good for one year. He told Compton that the licensed allowed him to "demonstrate" the line of transmitters he was selling along with custom built antennas for the FM band. He then asked Compton if I wanted to buy one.

The first monitoring of the pirate was in September. Compton said that he reported the situation to the FCC. He adds that he was in Victorville not long ago and the pirate was still on-the-air. (CGC Communicator)

**

RADIO POLITICS: JONATHAN ADELSTEIN SWORN IN AS FCC COMMISSIONER

FCC nominee Jonathan Adelstein has been sworn in to fill the Commission's remaining open slot. Adelstein will finish out the term of former Commissioner Gloria Tristani, which ends in June.

According to the ARRL Letter, the White House nominated Adelstein last February. But the nomination of the Democrat and a prot,g, of South Dakota Senator Tom Daschle had been held hostage for most of this year because of political wrangling over several judicial nominations. (ARRL)

**

CONVENTIONS AND HAMFESTS: HAM RADIO UNIVERSITY 2003

LIMARC -- The Long Island Mobile Amateur Radio Club - will hold the 2003 edition of its very popular Ham Radio University on Sunday, January 19th. Location is the East Woods School in Oyster Bay New York with the doors opening at 8 A.M. Eastern Standard Time.

Ham Radio University is a day-long session of intensive training in just about every aspect of Amateur Radio. The focus will be "hands on" with many demonstrations. And this year there will be special forums geared to the non-ham as well as the experienced ham radio operator.

There will also be a V-E testing session for those who would like to take an FCC exam and a Special Event Station set up and operational on the High Frequency bands.

Ham Radio University is a cooperative effort between over twenty clubs and organizations in the New York City- Long Island area. It is also the American Radio Relay League, New York City-Long Island Section Convention. For more information about Ham Radio University please contact George Tranos by e-mail to N2GA@arrl.org. (LIMARC)

**

GATHERINGS AND MEETINGS: MORSE CAMP IN THE U-K

A Morse code training camp is planned for the weekend of the 11th and 12th of January 2003 in the United Kingdom. The venue will be The Beacons, Simons Lane, in the town of Frodsham. For further details please contact either Catherine Pearson at RSGB HQ or Kath Wilson, the RSGB Regional Manager for North West England. Pearson can be contacted on by e-mail: toar.dept@rsgb.org.uk. Wilson can be reached at dwilson@btinternet.com (GB2RS)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

HAMVENTION 2003: "THE YEAR OF THE YOUNG"

The 2003 Dayton Hamvention will have "The Year of the Young" as its overall theme. Planners say that the show's focus will be on the young ham and on bringing 12 to 18 year olds into the Amateur Radio hobby. More information will be posted on-line at www.hamvention.org as soon as final plans are made firm. (Dayton Hamventionƒ)

**

EMERGING TECHNOLOGY: MICROSOFT EASES RESTRICTIONS ON NEW XP MEDIA CENTER

Microsoft says that it will relax restrictions on how users of its new multimedia Windows XP Media Center operating system will be able to copy and distribute TV programs. As a result of the changes, users will be able to view unprotected TV programs copied onto DVD on any PC with Windows XP Media Center Edition. TV programs with built-in copyright controls will still prevent users from making copies.

Originally, Microsoft had developed the software so that users could only watch television programs stored on the hard disk or copied onto a DVD on only one machine. That being the PC used to record the original content. (Microsoft)

**

OUR HERITAGE: REMEMBERING THE RADIO OPS OF WWW2

The event that lead to the United States becoming involved in World War 2 will be commemorated by Amateur Radio. This, as a group of survivors of the Japanese sneak attack on Perl Harbor visit the USS Hornet and take to the air this coming December 7th.

The SSB Frequencies will be 7.260, 14.320, 21.320 and 28.320 MHz. CW operations will be found on 3.530, 7.030, 14.030, 21.030 and 28.030 Mhz. Operating hours will be from 0900 to 1700 Pacific Standard Time. A special QSL Card will be made available for those who make contact. (KB6SSN)

**

INTERNATIONAL - CANADA: VC2C ON 60 METERS

An update on whats become an international version of the U-K five megs experiment. Word from Canadian that station VC2C was recently given special permission by the Canadian radio authorities to operate on the 60 meter band. It took to the air between the 21st and 25th of October. During that time, VC2C made two-way C-W contacts with four G stations, one GM and one GI operator. All contacts took place on 5.280 MHz. (RSGB)

**

INTERNATIONAL - NEW ZEALAND: NZART CALLS FOR ELECTIONS

New Zealand's national ham radio society, the NZART has placed a call for nominations for those who want to serve on the Council and as the organizations President. NZART says that New Zealand hams have until December 31st to file their nominations. (NZART)

**

ON THE AIR: WSWSS 2 METER NET GOES PSK-31

A popular weak signal net is going digital check-in. David Peters, KI6FF, says that the Western States Weak Signal Society 2 meter Southern California Technical Roundtable net held Tuesdays at 8:30 PM Pacific on 144.130 MHz is going PSK 31 only for check-ins. Once the evenings roster is complete the net will move to SSB and help people who need to get their equipment and software setup and checked out. (VHF REflector)

**

DX

In D-X, word that G0UIH will be in Australia and active as VK2IAY/P until the 15th of December. During this period, Steve will operate from several different rare IOTA island groups. Look for him on or around 14.260, 18.145 or 21.260 MHz on SSB only.

And NK3T will be active from McMurdo Station Antarctica as KC4 slash NK3T until late January or early February. QSL via his home call.

Also, special event station ER60SB will be on the air from the 23rd of January through the 2nd February 2003. This to commemorate the 60th anniversary of the Battle of Stalingrad. QSL via ER1DA either direct to Valery Metaxa, ER1DA, P.O. Box 3000, Chisinau, MD-2071, Moldova or via the bureau. (This weeks DX courtesy GB2RS)

**

THAT FINAL ITEM: FIGHTING BACK WITH A PHONE

And finally, here's one from the pages of the French e-magazine La Companion that we found surfing the Internet. Its the story of fighting back with a cellular telephone. Amateur Radio Newsline's Norm Seeley, KI7UP, has the curious details:

--

Maybe its all net-lore, but supposedly a female bus rider in a Paris suberb was annoyed by a loud-mouthed cellular telephone phone user a few rows in front of her. The fellow so boisterous that she could not even hear her companion seated right next to her.

Then the cellular bully supposedly made the mistake of mentioning his cellphone number during the conversation. A few minutes later, the lady picked up her own phone, called the man and asked him to: "...be quiet please".

But he refused. In fact he was so incensed by the call that he started to use all kinds of unsightly language. That is until he finally realizing where he was and that everyone on the tram was staring directly at him.

Undaunted, he supposedly stood up, uttered a few more choice words and exited at the next stop. The woman and her companion received a round of applause.

For the Amateur Radio Newsline, Norm Seeley, KI7UP

--

And what else needs be said! (Tommorrows Technology)

I have a Kenwood TM-D700A for sale. Radio is like brand new and still has the
plastic covering the display. Radio works perfect and comes with everything
just like it left the factory. Asking $450 including shipping.

You would have to notch one, and hope the computer could still copy the other.
The ear is actually much better than that type of deal than a computer. MK

I use hamscope. It covers PSK31, RTTY, CW, etc, and uses the same
MMRTTY engine mentioned by the others. It's free on the net. Try a
search. Should come up...MK

Hello,
Anyone selling or has a newer MTS2000 radio case? I brought a used MTS2000 the other day and the radio case is sure beatup and would like to replace it.

Please let me know.. its the MTS2000 model 1.

Thanks so much... n9mxt1@aol.com

Hi,

At what point in increasing power output from a PA does one need to worry about reflected power when squirting a RF signal down a radom-length wire? Is it possible to get away with say 6W out without damaging the output device?

It depends on how much (over) current and voltage the "output device" can stand.

"Reflected power" may be a poor way for you to think about this problem. Instead, try this: whatever load you have on the output terminals reflects back some load at the output active device (be it a valve, FET, bipolar transistor, or whatever). That particular load and whatever signal you're amplifying and the bias on the amplifier will result in some particular power dissipation in the active device (and in other circuit elements, too), and some particular power delivered to the load. If you dissipate too much power in the active device (or in some other component), it will fail prematurely. The conditions will also result in a particular set of voltages and currents, and if any of those is too great, it will cause trouble. In a high-Q circuit, you can have some pretty big voltages and currents with a pretty low power dissipation!

Normally, if the amplifier stage is designed for a particular load impedance and your load is very much different from that, you'll be well served to put a matching circuit (an antenna tuner!) between the

amplifier output and the load. How much different? It's probably not
a big deal for a 1.5:1 SWR (relative to the design impedance), and if
the PA is equipped with a tuneable tank, it may accomodate a fairly
large range of load impedances just fine.

As for a particular power level, how can we say? I can tell you for
sure that if the load is purely reactive, trying to deliver 6W of
actual power to it will be an exercise in futility. But a 1kW output
PA could probably deliver 6W to a horribly mismatched load without
problem, and a 1W PA would probably die quickly trying to deliver 6W
to even the best of loads. So "6W to the load" really isn't enough
info.

Cheers,
Tom

The two Toms are right:

This is a kind of tricky question to answer. You can blow up your final and possibly other stuff by overvoltage or overcurrent due to mismatch, but if all you're worried about is reflected power then it is simply power dissipated is DC power in - FORWARD power out. If you exceed your Pd max for the final, bye bye final. One way of monitoring all of this is by looking at your final stage current. It should stay in a safe operating range. Too high and you can damage the final by current and too low, you can damage the final due to high voltage. Maximum current by mismatch is very high and almost unlimited, maximum voltage by mismatch can have a two times supply level going into the final. Look at the specs for the final and figure this all out as far as a safe operating range. A simple thing to remember is that reflected power goes into a fairly low VSWR load when it sees your antenna port. It goes in and turns to heat. Heat is good in engines, but not very desirable in amplifiers. :-)

Happy Trails,

Steve WB4CZR

FYI

Macintosh Software for ICOM R75 Available at:

http://www.experbyte.com/macr75

Demos can be downloaded to test before purchasing.

Version are available for Classic Macs and OS X.

Requires an ICOM CI-V interface and a serial port
so USB Macs will also need a USB-to-Serial adapter.

Regards,

PH

Hello,
   I just won a Motorola GTX 800 MHz HT and want to get the radio programmed
with trucking freqs. Can anyone HELP me get this programmed? and or can tell
me what they think of the unit. Just going to use it for receiving trunking
while at work.

Please let me know.... email me at: n9mxt1@aol.com

Thanks

Jeffrey

I have for up for sale a Motorola Spectra, UHF 450-482MHz (goes down to 440) It is the remote unit, 100 watts, but it is tuned down to 50 watts output power. MDC/DTMF signalling. Call Alert/Sel-Call. DTMF Calls. 11 Character Alpha display. Comes with the advanced A9 head with full DTMF pad, includes bracket & screws. Complete package, includes heavy-duty hand mic in very good condition. A speaker in excellent condition with bracket & screws. All cables needed, control, power, ignition sense. Guaranteed not to be DOA. See my feedback rating on eBay (kc2gfg) Asking $500, I will include free shipping (about an $18 value) - USPS Priority Mail Insured w/delievery Confirmation. E-mail mikemost@aol.com

Thanks,
Mike

On Thu, 05 Dec 2002 10:49:29 GMT, motsteve@attbi.com (carltons) opined
thusly:

>This is a kind of tricky question to answer. You can blow up your final
>and possibly other stuff by overvoltage or overcurrent due to mismatch,
>but if all you're worried about is reflected power then it is simply power
>dissipated is DC power in - FORWARD power out. If you exceed your Pd max
>for the final, bye bye final. One way of monitoring all of this is by
>looking at your final stage current. It should stay in a safe operating
>range. Too high and you can damage the final by current and too low, you
>can damage the final due to high voltage. Maximum current by mismatch is
>very high and almost unlimited, maximum voltage by mismatch can have a two
>times supply level going into the final. Look at the specs for the final
>and figure this all out as far as a safe operating range. A simple thing
>to remember is that reflected power goes into a fairly low VSWR load when
>it sees your antenna port. It goes in and turns to heat. Heat is good in
>engines, but not very desirable in amplifiers. :-)

So basically what you're all saying is that it's 'getawaywithable'
provided one choices a final transistor that's sufficiently overrated
for the purpose? Okay, so say 5W into a random length of wire with a
Vcc of 12V at a signal frequency of 40MHz. Can anyone suggest a
suitably overrated device? (within reasonable limits, of course)

Got five or so realys I'd like to use in a project, and hope I can innovate
to avoid having to go out and buy one.

I need capacity of 10 amps through the contacts. My relays each have 5 amp
contact ratings. Can I parallel two of them and get close to having the
required 10 amps I'll need (actually, I think 8 amps capacity would do the
job)?

Should be able to, but I wouldn't. If one fails, it would destroy the
other. Would only do in a pinch and would fuse each at 5A, so that if I
lost one, it would not destroy the other or cause a fire.

Another thing to consider is what happens during the making and breaking
of the contacts. One relay will open/close before the other, if only
slightly, and the first one will have to absorb the entire inrush or
break current.

Furthermore, the relays may differ slightly in resistance and at
low resistances, this can significantly affect current flow. For
instance, if one relay has .01 ohms of contact resistance, and
the other has .02 ohms, it may not matter to the load, but the
first will carry 2/3 of the delivered current.

I'm wondering how an AM tuner could be worthwhile inside a computer.
Anytime I try to use an AM radio near my PC, the interference is awful.

J K

Amateur Radio Newsline™ Report 1321 – December 6, 2002

Amateur Radio Newsline report number 1321 with a release date of Friday, December 6, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. North Korea takes its only ham off the air and the first digital voice Q-S-O across the Atlantic. These stories are first on Amateur Radio Newsline report number 1321 coming your way right now.

(Billboard Cart Here)

**

INTERNATIONAL – N. KOREA: LAST HAM FORCED OFF THE AIR

The Peoples Republic of Korea appears to no longer want Amateur Radio operating from its soil. It made its intention clear when it asked its only ham ito pack his gear and send it out of the country. Jeramy Boot, G4NJH, in Nottingham England has the details:

--
Ed, P5/4L4FN, the only radio amateur operating legally from North Korea, has had to close down. On the evening of the 22nd of November, Ed was called into a meeting with the North Korean Radio Regulation Board. Without any explanation he was politely asked to stop all transmissions and to pack up all his radio equipment.

Ed spent the following day dissembling his antennas and packing boxes. That afternoon government officials sealed all the boxes and Ed has been told to take everything out of the country when he leaves North Korea for a two-week holiday on the 10th of December.

Jeramy Boot, G4NJH
--

With Ed now off the air, ham radio is gone from North Korea and nobody expects it to be resumed anytime in the near future. It also puts North Korea back near the top of D-X’ings most wanted list.
More on this story is at www.amsatnet.com/p5.html. (RSGB)

**

EMERGING TECHNOLOGY: DIGITAL HAM AUDIO SPANS THE ATLANTIC

Two ham radio communications pioneers have achieved a major breakthrough. The first two-way digital voice transmission across the Atlantic via Amateur Radio. Norm Seeley, KI7UP tells us who did it and how it was accomplished.

--

Doug Smith, KF6DX, and Didier Chulot, F5MJN, have successfully transmitted and received HF digital speech signals between Sevierville, Tennessee and Paris, France. It happened on Friday, November 22 nd.

The first historic contact took place on 21.218 MHz in the 15 meter band. Chulot spoke with Smith for several minutes using a high-frequency digital link within a 3-kHz bandwidth. Signal strengths were S-5 to S-7 and readability was solid in both directions.

The feat was accomplished using Ten-Tec transceivers and digital audio systems from Thales Communications.

--

DEMO AUDIO HERE

--

The Q-S-O demonstrated the advantages of digital audio for two way radio. This includes noise-free, FM-like reception and the potential for simultaneous voice and data exchange.

With an eye toward the digital future of Amateur Radio, I'm Norm Seeley, KI7UP.

--

The Ten-Tec/Thales system used in this experiment is based on a new international broadcasting standard for digital radio adopted last year by the International Telecommunications Union.   The FCC has approved a similar standard for broadcasting in the United States. An Amateur Radio version is expected to appear on the market sometime in 2003. (KF6DX, Ten-Tec)

**

EMERGING TECHNOLOGY: PPW PROPOSES ELECTRONIC INFRASTRUCTURE TO WARN PUBLIC OF DANGER

A group of U.S. communications security experts has recommended that Americans be alerted to impending danger over their wireless devices. Amateur Radio Newsline's Fred Vobbe, W-8-H-D-U, takes a look at this new concept in emergency notification:

--

The Partnership for Public Warning says that a national wireless system could send alerts to citizens via their pagers, mobile phones or computer screens.

The Partnership for Public Warning is a newly formed thirty-member advisory body that includes representatives of government agencies, relief agencies and even a ham radio operator. And on Monday, November 25th it released a report that says conventional media broadcasts may spread alerts too slowly in instances of pending natural disaster or terrorist threat.

P-P-W says that the newly formed Department for Homeland Security should take responsibility for leading development of a national all-hazard public warning architecture. This, in partnership with other federal agencies, state and local governments, industry, universities and other stakeholders. The technology itself would be produced by private industry with the alert system operated by governments and selected other organizations following a strict set of alert protocols.

P-P-W says that improved warning systems and procedures will reduce losses from natural and man-made disasters, and will speed recovery. Most important is that it will save lives.

For the Amateur Radio Newsline, I'm Fred Vobbe, W8HDU

--

President Bush cited quick responses to attacks as a priority of the new Department of Homeland Security which will consolidate parts of 22 departments to better prevent attacks in the wake of the September 11, 2001 terrorist attacks in which some 3,000 people died.

information about the Partnership For Public Warning is on the web at http://www.partnershipforpublicwarning.org/ppw (Published reports)

(5 sec pause here)

**

HAM RADIO GROWTH: GOOD NUMBERS TO US

The folks on that "other band" might call this “almost good numbers.” This with word that the number of radio amateurs licensed by the Federal Communications Commission is at a five-year high. But there are some caveats. Bill Pasternak, WA6ITF, has more:

--

According to the CQ Magazine website, FCC numbersshow a total United States ham population of 684,498 as of October 31st. And breakdowns provided by Joe

Speroni, A-H-Zero-A, say that the primary growth has come among Amateur Extra Classand General Class licensees. Extra is now breaking the 100,000 point for the first time.

Technician Class figures have essentially held steady. Also we had 20,000 new hams entering the hobby in the year ending October 31st.

License renewal statistics were also encouraging with the renewal rate climbing from an abysmal 45% two years ago to a better, but still unacceptable, rate of 55% in the past year.

Better numbers, but not the best.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, in Los Angeles.
--

More on licensing figures are on the web at www.speroni.com/fcc (CQ)

**

HAM RADIO IN THE PUBLIC EYE: THE ATLANTC MONTHLY

The November 26th edition of Atlantic Monthly Magazine On-Line has some good words about ham radio and its role in homeland security. In an article titled America's Secret Weapon in the War on Terror, one of the groups singled out for attention is the nations corps of Amateur Radio operators. Its described in the article as an ever-ready line of emergency communications.

The story goes on to say that America boasts 650,000 licensed ham-radio operators. It quotes he ARRL's Mary Hobart as saying that about 1,500 of them are fully certified in emergency communications and are prepared to rush to the scene of a forest fire, flood, or hurricane with a jump bag full of portable radio equipment. And says Hobart, That can be crucial.

Atlantic Monthly notes that when phone lines, radio towers, and even satellites go down, ham operators -- broadcasting each to each other , and operating on batteries or generator -- stay on the air. And says Atlantic Monthly, after the terrorist attacks of 911 when New York's cell phones turned into paperweights hundreds of hams, some from as far away as Texas and California, turned out to provide radio lifelines for emergency workers and relief agencies.

The article is must reading for everyone involved in Amateur Radio public relations. It can be found at the U-R-L listed in this weeks Amateur Radio Newsline print edition.

The complete article is at
http://www.theatlantic.com/politics/nj/rauch2002-11-26.htm (KS2G)

**

ENFORCEMENT: FCC INVESTIGATING INTERFERENCE TO EMERGENCY TRAFFIC IN LOS ANGELES

The FCC is looking into allegations that two Los angeles area hams interfered with a distress call on an area repeater. The FCC's Daryl Duckworth, NN0W explains:

--

"The Enforcement Bureau has opened a case involving allegations of deliberate interference to emergency communications on the N6SAP repeater in the Los Angeles area. Anton W. Johnson, N6OAY, and Ledge Musselman, KC6NCN, are being asked to explain the allegations of the operations on October 2.

Information is also being sought from the repeater licensee. Scott Press.

This mater is being taken very seriously by the Enforcement Bureau since emergency communications is one of the foundations of Amateur Radio."

--

The FCC claims that Johnson and Musselman interfered with attempts to relay emergency traffic on the 147.435 repeater at about 9:45 a.m. on October 2nd. Press is being asked to explain what action he is taking in this matter. He is also been directed to summarize any conversations he may have had with the licensees against whom the allegations have been made. The FCC says that Press must also provide any written correspondence he may have sent to Johnson and Musselman. All three were given twenty days from he date of the FCC letters to respond.

**

ENFORCEMENT: THE STORY OF THE EX-AA8DP

A follow-up now to last weeks report of the capture of Steve Anderson, the ex AA8DP. Anderson was wanted in connrection with an alleged attack on a police officer. He was arrested in the hills of North Carolina following a manhunt that has lasted over a year. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the story of how Anderson was caught:

--

A tip to the Fox Television program "America's Most Wanted" and forwarded to federal investigators has led to the arrest of Kentucky fugitive Steve Anderson, the ex-AA8DP. Anderson, an alleged white supremacist who resigned his Amateur Radio license almost two years ago and then operated an unlicensed radio station from his home, had been at large since October 14th of 2001.

According to the Louisville Courier-Journal, Anderson was arrested in the mountains of southwestern North Carolina by the Bureau of Alcohol, Tobacco and Firearms and the North Carolina State Bureau of Investigation. The A-T-F's Don York told the newspaper that America's Most Wanted received a tip about Anderson's whereabouts after airing its second segment on him about a month ago. The tip was forwarded to the A-T-F, which worked the case with North Carolina authorities.

Anderson is accused of shooting an automatic weapon at Deputy Scott Elder.

This, after Elder had pulled Anderson's truck over north of Middlesboro Kentucky for a traffic violation. Elder was unharmed after Anderson allegedly opened fire, but his police cruiser was struck about two dozen times. Police said Anderson then drove into the mountains, and a search of his property turned up explosives and guns.

Anderson had attracted attention of authorities several years ago by playing host to a small Ku Klux Klan rally during which a cross was burned. He also allegedly operated a shortwave radio station out of his home, where his commentary against minorities, immigrants and the government drew the attention of the Federal Communications Commission. The Anti-Defamation League complained to the FCC about Anderson's broadcasts which were taking place in the Amateur bands. Rather than explain his actions, Anderson sent in his AA8DP license for cancellation. It was accompanied by a rather convoluted message that said he did not recognize the licensing authority of the FCC which he called an agent of a foreign power.

Anderson continued to broadcast but bowing to extensive pressure from the nations ham radio community, he took the transmissions out of the Amateur service bands. They stopped after he disappeared following the alleged attack on Officer Elder.

For the Amateur Radio Newsline, In Henry Feinberg, K2SSQ.
--

As previously reported, the ex-AA8DP had been a member of the Kentucky State Militia until April 2001. That group dismissed Anderson because he refused to shut down his unlicensed radio operation. (ARNewsline(tm) from published reports)

**

THE INTERNET VS. HAM RADIO: HOTMAIL AND JUNO BLOCK ARRL E-MAIL FORWARDING

If you get your e-mail using the American Radio Relay League's @arrl.net vanity address, and use Juno or Hotmail as your account you know that you were cut off for a few days. It wasn’t the ARRL’s doing. Blame it on the twi internet service providers.

According to an ARRL bulletin the two companies notified the League on November 25th that they had stopped accepting e-mail messages forwarded to users of their services from the arrl.net e-mail server. According to representatives of the two companies, this was part of heir solution to the Internet-wide problem of spam.

The ARRL, through the vendor for the arrl.net server began working with both companies to resolve this matter. The ARRL and Hotmail reached a accord the fllowing day and service was restored. Juno was back late on Monday December 2nd. During the peak of the service outage, forwarded e-mail to nearly 6,000 ARRL members was curtailed. (ARRL)

**

RADIO LAW: NEW CODES DEVELOPED TO HELP STUDY RADIO RELATED HIGHWAY ACCIDENTS

State highway departments will soon get help tracking how many traffic accidents are caused by drivers chatting on their handheld cell phones or C-B sets, using their pagers or checking their personal digital assistants. In January, every state will receive a booklet of revised codes that describes causes of vehicle crashes, including distractions from electronic communication devices. The codes were developed by traffic safety and crash data experts, including the Governors Highway Safety Association and the Federal Highway Administration.

A spokesperson for the Governors Highway Safety Association, says that the updated crash codes will allow the organization to develop data that demonstrates whether electronic distractions in cars are a serious safety problem. A March report by the National Conference of State Legislatures suggests device-related distractions killed an estimated 600 to 1,000 motorists in 2001 and could kill 2,000 a year by 2004. (Published news reports)

**

RADIO EDUCATION: HAM RADIO COURSE OFFERED AT PENN STATE

Amateur Radio is a part of the training being offered this fall to freshmen at the Pennsylvania State University. According to Brad Parola, KB3HQE, Vice President of the Penn State Amateur Radio Club, part of the course during the first half of the Fall semester included exposure to Amateur Radio. Students were shown how to tune radios like the Ten Tec Pegasus, shown how to receive PSK 31 signals, and were given a tour of the world famous Rock Springs Antenna Test Range run by Dr. Jim Breakall WA3FET. Early in October, those students who were interested were given the opportunity to take their Technician class tests. So far 15 students have passed an Amateur service exam. (KB3HQE)

RESCUE UPDATE: ZL1AMO CONDITION REPORTED UNCHANGED

We have an update in the medical condition of famed D-X'er Ron Wright , ZL1AMO. Jim Meachen, ZL2BHF, has the latest:

--

A bit of good news this week. Wrights daughter Terri says the family visited Ron in the hospital and he was sitting up in a lazy boy chair. This is the first time any of the family had seen seen him out of the bed since he was hospitalized. Terri Wring says that Ron is also trying to communicate with those around him and he looks a lot better than on previous visits.

As reported last week, Wright suffered collapsed lungs while visiting Fiji. He was air lifted by an emergency air ambulance to Auckland New Zealand where he was initially reported to be in critical condition and on life support.

The INDEXA - the International D-X Association -- has established a fund to assist Wright and his family with the cost of air evacuating him from Fiji to Auckland. Donations go to the ZL1AMO Air Ambulance Fund, in care of Bill Jennings, W4UNP, P. O. Box 607, Rock Hill, South Carolina, 29731. Sorry, but INDEXA says that contributions to this fund are not tax deductible.

From Auckland New Zealand - down under - I'm Jim Meachen, ZL2BHF, reporting for the Amateur Radio Newsline
--

Updates on the fund and Wrights condition are being posted to the web at www.papays.com/opdx.html (ARNewsline(tm), INDEXA, AA7UC)

**

THE SCIENCE PAGE: WHALES YES - NAVY NO

A federal judge has tentatively blocked the Navy from deploying a new early warning system because it might harm whales. Amateur Radio Newsline's Brucce Tennant, K6PZW, has the rest of the story:

--
A Federal court has said no to a new high-frequency SONAR system designed to detect enemy submarines at long range because it could further endanger the worlds whale population. But in making his ruing, the judge also said the Navy may use the sonar during wartime and must be allowed to train with it beforehand.

In partially siding with environmentalists, the judge ordered both sides back to court to begin formulating a plan balancing environmental and military concerns. Environmental organizations say the Navy's powerful sonar system can strand, maim or kill marine mammals. The Navy disagreed.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.
--

A few days earlier, a different judge ordered the National Science Foundation to stop firing high-intensity sonic blasts into the Gulf of California because they harm whales. So far there has been no comment from either the Navy or the N-S-F. (Published reports)

**

HAM RADIO IN SPACE: UO-22 IS BACK WITH US - FOR NOW

G7UPN reports that U-O-SAT 22 is back on line and open for business. At least for the time being.

Chris tells the AMSAT News Service that new software has been loaded to try and keep the downlink operating most of the time. But says G7UPN, UO-22 is an older veteran satellite. This means it may give problems in the near future. More information is in cyberspace at www.amsat.org (ANS)

**

INTERNATIONAL - JAPAN: JA SAYS NO TO PLT

Japan has said no to the introduction of Power Line Transmissions or P-L-T in that nation. Following extensive trials, the Ministry of Public Management, Home Affairs, Posts and Telecommunications has decided not to permit their roll-out for fear of interference to other services.

The Japan Amateur Radio League had been actively working with the government, radio astronomers, broadcasters and others to assess the impact of P-L-T systems on the radio spectrum. The results of this P-L-T study in Japan is a real eye-opener. It showed conclusively that Power Line Transmission system emissions are harmful to High Frequency communications operating in the range 2 to 30 MHz. Because of this Japan's telecommunications regulators have refused all requests from P-L-T manufacturers to operate these systems. (JARL, Q-News)

**

INTERNATIONAL: GETTING ON THE AIR DOWN UNDER

Still in that region of the world, were you aware that New Zealand is one of very few countries in the world where licensed amateurs visiting from overseas can immediately operate?

Well it is and a visiting amateur can get off an airplane, walk into the terminal building and start operating on 144 MHz and above by simply signing his own call sign portable Zed-L. This, without the hassle of getting a license and without paying a licence fee.

For more information on operating in New Zealand as a tourist or visitor take your web browser over to www.nzart.org.nz (NZART)

**

ON THE AIR: COMMEMORATING DIANA

Back here in the U-S-A, the first successful moon bounce experiment was conducted by the Army Signal Corps on January 10th 1946. And to commemorate the event, the Ocean Monmouth Amateur Radio Club will operate from the historic Diana radio site on January 10th 2002. The Ocean Monmouth group plans to operate using Morse and SSB in the General and Novice Technician sub bands of the 80, 40, 20, 15, 10 meter bands. For more information on the Diana Project and for QSL info please visit the OMARC web site at www.qsl.net/n2mo (OMARC)

**

DX

In D-X, F6COW is reporteed tobe operating from the 9S1X club station in the Congo. He will reportedly be there until the 9th of December. (GB2RS)

Also, F6BLQ will participate in the ARRL 10 Meter Contest on the 14th and 15th of December, also as 9S1X. His operation will be on SSB only. (GB2RS)

And ST1MN is a new ham in the Sudan.   He will be active on all bands until the end of June 2003. Q-S-L as directed on the air. (GB2RS)

A lot higher in frequency, FT1ZK, is active on 6 meters every afternoon from Amsterdam Island. The operator is named Caroline and she has a beacon transmitter active on 50.086 MHz and running 24 hours a day. She will be on Amsterdam Island until January 16th. QSL via F5JCB. (VHF Reflector)

**

THAT FINAL ITEM: THE CANALS OF VENUS - DEBUNKED

And finally this week lets turn our eyes toward the planet Venus. Just our eyes. Not our telescopes. Because if we do use a telescope we might make the very same mistake made by a very famous astronomer regarding canals on that mist shrouded planet. Q-News Graham Kemp, VK4BB, takes us into the cosmos for this one:

--

Turn of the century astronomer Percival Lowell is well known for promoting the incorrect notion that water canals had been built on the surface of Mars. He also drew a map of the "canals" on Venus; the only problem was that no one else could see anything resembling canals because Venus is always shrouded in clouds.

Turns out that Lowell had narrowed the aperture of his 24" telescope down to about 3" to attenuate the bright light from Venus. That little known fact - recently publicized - caught the attention of optical experts who realized that Lowell had unwittingly turned his telescope into a reverse ophthalmoscope, an instrument used to examine the interior of the eye. Instead of mapping the surface of Venus, Lowell was apparently mapping the shadows of blood vessels and other structures on his own retina!

Sky & Telescope magazine explains the situation in detail, presents Lowell's sketch of the Venusian "canals," and a photograph of retinal blood vessels. The two patterns are strikingly alike.

From Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

You can see the pictures Graham reefers to in the online edition of Sky and Telescope magazine. Just take your web browser over to http//skyandtelescope.com/news/current/article_648_1.asp (Q-News)

Just wondering if anyone has any personal experience with operating QRP portable while on kayaking trips or any links to the experiences of others in volved in the same. Which they would be willing to share.

Such as reported in the story in the link below.

http://www.knightlites.org/Knightlite/bear_island_2001.htm

I am a sometimes kayaker who has recently become interested in playing around with ham radio again, and this type of ARS , Adventure Radio Society , type of outing has some appeal to me as something worth trying.

73

David

In your original post on this topic you referred to "reflected power
with RF signals" in a PA system. Further, the topic mentions "untuned
loads".

Clearly, "PA" stands for Public Address. PA systems are only used for
audio. I am puzzled why you and several of the respondents are
overlooking this fact. Their is no way you could get any "normal" PA
system to reproduce frequencies of 40MHz.

"Tuned loads" and "reflected power" have no relevance in audio
distribution. These are RF issues.

PA is used for POWER AMPLIFIER as well.

I wrote several articles on operating QRP over the years... I haven't written
much in about 2 years though. One article was in World Radio... QRP on ICE
from ice shanties...."USECA's Ice Cubes". Another was in both World Radio and
the FISTS newsletter (as well as our own USECA Express... available on line)...
it dwelt on a QRP (most 40m) 4 day trip to S Manitou Island in Lake Michigan.
Sorry... no links that work that I could find.

Clearly from the context, PA means "Power Amplifier" in this case. I'm familiar with the term dating back to the 30's or perhaps before, when many transmitters were of the "MO-PA" type: two stages, master oscillator and power amplifier.

As for Paul's question about a recommended transistor: you didn't say as I recall whether it's to be a linear amplifier or a class-C stage, and if it's class-C whether it's to be amplitude modulated or not. Those are important considerations. Some RF transistors are specifically rated with respect to the output mismatch they can safely handle, but if you arrange things properly, you'll be able to tune the antenna to provide the appropriate load to the amplifier stage, and not have to worry overly much about mismatch, unless you disconnect the antenna. It's common in RF power amplifiers, especially solid state ones, to sense whether the load is correct or not, and power things down if it's not. In the case of a fixed-tuned system designed to operate into a 50-ohm load, the protection might well be a built-in 50-ohm reflected power meter feeding an "AGC" or a shutdown signal back to the amp.

Cheers,
Tom

Hello, I'm taking an antenna theory and design class right now. I would like to find a good antenna book that I can use for practice problems. The textbook used in the class is "Antenna Theory and Design" by Stutzman and Thiele.

The book has the equations but not enough examples. I need a book with worked out problems.

The topics include:
antenna arrays, pattern multiplication,
resonant antennas (dipoles, Yagi-Uda, large loop antennas),
broadband antennas(helical, spiral, log periodic),
aperture antennas(horn and parabolic antennas).

Remember that this is an academic course, so many other types of topics, while interesting and useful will not be in the course. Can anyone recommend any good antenna books with solved problems on these topics?

Pardon my naivete here.. but as a new /AG who just bought a new rig, I've got a question that may sound rather dumb.. but here goes..

My new IC-746PRO emits a tone for 20 seconds as it tries to tune the antenna.. The manual also states to turn the RF gain ABOVE 30% while this happens to effectively tune..

Isn't this something that could cause damage to my rig?? I'm not to cool on the idea of 20 seconds of xmit as it tries to tune - especially if the SWR starts out above 3:1 or something.. The longest the rig has ever taken to tune a given antenna has been about 10 seconds, but still - is this the correct way to do things?? Should the manual actually have said LESS than 30% power, instead of ABOVE?

Thanks for any help..

Chris/KC2DZE

My single story home is on a lot 120' x 60'. I live on the east coast

and would like to work at least the states and some DX.
What would be the best design antenna to use on 160m
with my property laid out as shown below. Any ideas or a link to a webpage
with drawings or design would be appreciated. No unsightly
antennas can be in the front yard...only a wire maybe to the light pole.
I also prefer not to use a tuner except to expand my bandwith.
Any help would be greatly appreciated.

73,
Andy WD4FY

Andy.......an inverted L is hard to beat, but you might not have the room.

Won't hurt it. They are very tough, but I wouldn't set it at 30%. Shouldn't need that much.

Take a wire up the front of the house then to a short mast on the chinmey,
then over the house roof to a pole at the other end of the garden, then come
downwards, sloping, to within 3 feet of the ground.

Make a ground connection to half-dozen shallow-buried wires in the front
garden + the ground connection to the incoming 50Hz power supply + the
domestic hot water system + the cold water system + the rising water main +
metal gas pipes if you have any. Don't neglect the ground connections.

I had a similar set-up for many years. I called it an inverted-L or U. A
simple home-brew tuner was needed. Worked the world on all bands with 100
watts or less. Favourite band was 160 meters.

Keep total length of antenna wire in the range 140 to 170 feet. A few bends
and changes in direction have no adverse effect.

Hello Vshah101,

Try books by Kraus or Balanis. Get Mathcad, type in the long equations and get E and H radiation plots, etc. It worked for me. Also good to do some practical measurements to show theory works.

Cheers

Thanks for everyones input......including those that did not post to this newsgroup.
I will try several of the ideas presented to me and see which works the best.

Try this link....it's for the 941E....should be close enough.
It's a user manual in pdf format.
There is no schematic though.

http://www.mfjenterprises.com/man/pdf/MFJ-941E.pdf

Does anyone know of a directory which you can search for silent keys? I don't really want to know that someone has passed on, but I've been out of touch with my old ham buddies and don't want to send them mail only to hurt their xyl who receives it.

Thx,

Steve WB4CZR

How are AM radio station regulated with respect to power limits?
Power into the final? Carrier power? PEP?

Hello, can someone please supply me with a copy of the M2 6M7 booklet. I
have just got the antenna seond-hand without the instruction booklet and
need a copy to set it up correctly.

Scan by email is okay.

Cheers

John

================================

I once had some success with tracing a particular old radio friend of mine who I had never met except on the amateur radio and who quite possibly was now likely to be deceased. I guessed at the area where he was most likely to have been known and sent an e-mail to the present secretary of a radio club in the same area.

The secretary sent a letter by ordinary post to the family of my old friend at his last known address with a printed copy of my e-mailed enquiry. Eventually I received a pleasant letter from his widow. My friend had in fact died quite recently. He had been retired for several years. He had not been on the radio for several years.

She was pleased to hear from me. I had reminded her of her husband's good times of years ago. She was most pleased that he was still well remembered by his old radio friends. (I had originally e-mailed to the club secretary on behalf of two or three of us). She told me of the circumstance surrrounding his death (nothing particularly unusual) which gave me some personal satisfaction by putting my mind at rest.

We corresponded sympathetically at intervals for several years. She sent me some of his old QSL cards, mine amongst them. We had a common interest - her deceased husband. I was happy to replace in a very small way the great loss in companionship she had suffered when he died. I think she very much appreciated our occasional contacts by letter. We never met. The letters eventually ceased and I assume she died herself.

I relate this simple story to illustrate that it is unlikely to cause hurt to relatives of old friends who may have passed away. Make your enquiries sympathically. Looking for a dear old radio friend if he's still around. Just don't barge in blowing bugles and waving rattles. ;o)

By the way, I'm 77. Nobody is likely to get upset by enquiries about me after I've gone. I've already paid all the bills.

Reg, G4FGQ

hey john
if you dont have any luck getting the manual on here go to M2 website
and email them or call them they will set you up and also have any spare
parts you may need
www.M2inc.com i think is there website

John wrote:

Subject: Call for National Day of Prayer in View of Present Threats Against U.S.
Message-ID: <20021120030522.18548.00000170@mb-fp.aol.com>
Xref: archiver1.google.com rec.radio.amateur:4507

http://www.angelmystry.com/seekye/worldprayer.htm

I have been moved to start a grassroots campaign to ask the President, Vice-President, Members of Congress and State Legislators to call for an IMMEDIATE National Day of Prayer to be held within the next 7 - 10 days. This would include all faiths, religious beliefs, etc., similar to the services held in Washington, D.C. and elsewhere following the September 11th tragedy.

This is calling for an email campaign so that our voices may be heard clearly by this nation's leaders. The campaign is to be extended to religious leaders, other organizations, etc., to get this whole country involved.

Please check out the following website, copy and paste to your heart's content, and email your legislators. We are in a time of sincere threats to our nation, and it is time that we pray humbly to God for His mercy and His blessings upon this nation and the world.

I respect each person's right to their own belief systems. I firmly believe that when this nation got on its knees and prayed, following 9/11, that many other disasters were mercifully stopped. I believe this intervention was God's response to the millions of prayers that were said worldwide.

You will find links on the page to a Contact Page with the email addresses, a Suggested Letter, What YOU Can Do, and under the link "One Nation Under God" copies of some of the wording of our nation's documents (with the words highlighted where they talk about our nation being founded on God's principles.)

Please feel free to write your own letters....I've worked for 12-18 hours/day for the past several days on all this and I'm beat, so I'm not sure that if I looked at it in the morning with a fresh cup of coffee, it would make complete sense. The good intentions, and the love of this country, and the people of the world should be enough! Please overlook the flaws, and jump in and let's see what we can do!

If you feel so moved, please also send a copy of this message and the website address to anyone else you think might also help.

We don't know HOW REAL these threats are, but if we unite now in prayer, collectively, perhaps further disasters will be averted through God's infinite mercy. Many of the other speakers I've known on Keen are being given visions, also. Please, PRAYERS ARE ANSWERED!!!

http://www.angelmystry.com/seekye/worldprayer.htm

May God Bless You All.

Can't find this thing in the cross ref. I have ..

It's a high power RF transistor and I think it's UHF (or at least usable there). I need to know all the specs and what it crosses to.

Thanks,

N5GPI

N5GPI,

You probably WONT find it in any cross reference book either. That's an old CTC part from probably the 70's. Let's see, Acrian bought CTC back in the early 80's, then Acrian went out of business sometime later. GHz Technology picked up some of the product line and continued to manufacture it for customers left hanging by the Acrian crash. You might check with GHz. Here's a good page you can visit and maybe match up the case drawings with what you have and go from there...

http://www.ghz.com/products/vhf.aspx

Oh yeah, earlier this year GHz was bought by Advanced Power Technology, but they still maintain their old web site. If you see something close, drop them an email and ask about your part. Maybe they may still have an old CTC catalog laying around and could give you some info from it.

The last hope to find out anything would be Richardson Electronics. They have been distributing RF power transistors for longer than I've been around. I think they used to carry Acrian and CTC parts way back when. You can find them at http://rfwireless.rell.com/.

73's and good luck! (You'll probably need some!)

Mike - KD6PKJ

Amateur Radio Newsline™ Report 1318 – November 15, 2002

Amateur Radio Newsline report number 1318 with a release date of Friday, November 15, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio is a lifeline after tornadoes hit on Sunday November 10th. Find out the details on Amateur Radio Newsline report number 1318 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO AND THE NOVEMBER 10th TORNADOES

Ham radio is called out after a series of tornadoes hit in several states east of the Continental divide. Thirty-five are confirmed dead. Damage is in the tens of millions. And ham radio becomes a life-line when all other communications fail. We start our coverage with Amateur Radio Newsline’s David Black, KB4KCH, in our South-East bureau not far from one of the areas hardest hit:
--

For Alabama, the night of November 10th is one for the record books. The small town of Carbon Hill was devastated. Ten people were killed there, and damage was extensive following two tornadoes--one of them, an F3 that cut a path of destruction measuring 46 miles. In all, 12 people died in Alabama.

Two counties away from Carbon Hill, amateur radio operators were on duty at the Weather Service's Birmingham Forecast Office, where forecasters were issuing a total of 46 Tornado Warnings. The ham radio group that works with the Weather Service is called the Alabama Emergency Response Team, or ALERT. Chuck Arthur, KF4SSX, is ALERT's President:

--
Arthur: “It was very busy. We had four of our members down there from 4 p.m. until after 2 a.m. and we were busy the entire time we were down there”
--

At one point, more than half a dozen Alabama counties--stretching from eastern Tennessee to eastern Mississippi--were all under Tornado Warnings at the same time.

--
Arthur: “We are able to talk to all of the different storm-spotter nets across North Alabama and of coarse the National Weather Service coverage area and receive reports of damage, tornado touch-downs, hail and all of the important pertinent things that the Weather Service is interested in”
--

Arthur says emergency communications were conducted on VHF and UHF frequencies:

--
Arthur: “The storms came in from the South-West and moved all the way up through the North-East corner of the state three or four times in a row. We had multiple counties under tornado warnings at the same time so it makes it very busy”
--

To the north, Tennessee was slammed hard by killer twisters, too. 17 deaths were reported statewide, making the outbreak one of Tennessee's deadliest. President Bush declared 16 Tennessee counties disaster areas. From Louisiana to Pennsylvania, 88 tornadoes were reported.

Another community hit hard was Van Wert, a town in western Ohio. Fred Vobbe, W8HDU, of the DX Audio Service is in nearby Lima Ohio has that part of the story.

--
NOTE: DAVE BLACK TOSSES TO FRED VOBBE IN OHIO
--

Sunday was cool and quiet, but when storms racing across Indiana quickly it heated up the amateur community in Van Wert, Ohio. The call for amateur assistance came as Van Wert Ohio E.M.A. Director Rick McCoy, operating the Van Wert Amateur Radio Club's W8FY, alerted hams to an approaching storm.

The storm spawned one tornado in the community of Berne, Indiana, but by the time the storm arrived in Van Wert there were reports of as many as four separate funnels.

Listening to ham traffic on the 146.850 repeater and public service channels was like listening to an attack from enemy. Call after call relayed the fact that there were tornadoes on the ground. Homes, businesses, and even a large power feeder tower buckled and fell to the ground as the winds from the F4 tornadoes tore up the once pristine countryside.

The initial storm spotters tracked the storm system as it entered Van Wert county, and then exited into Putnam County where it then hit Continental, Ohio. Later the storm touched down again in Huron and Sandusky Counties on the south shore of Lake Erie.

At one point a ham radio operator solemnly reported assistance as he came across a fatal. Hams assisted in pulling people out of homes that were flattened. Four people died, two in Putnam, and two in Van Wert County.   The death toll in west central Ohio could have been higher had spotters, and the Van Wert County E.M.A., not worked cooperatively together. Hams reported to the Van Wert E.M.A. and an alert system used by the county which warned a group of school kids who escaped from a theater just seconds before it was reduced to rubble, leaving a small Toyota in row one.   Citizens had as much as 28 minutes to prepare for the storm due to the efforts of hams

Ham involvement did not stop with spotting. Again, working with the Van Wert County E.M.A., hams assisted in damage assessment, helped in local shelters, located downed power lines, kept traffic and the curious out of devastated areas, and assisted police, fire, and EMTS operators with communications.
Some hams stayed through the night manning communication centers, which helped authorities concentrate on the task of finding the missing, and assessing the damage.

The storm was compared to the April 3rd, 1974, tornado in Xenia, Ohio, where 33 lost their lives. Had it not been for ham radio operators working closely with authorities the death toll in Van Wert and Putnam would have been much higher.

In west central Ohio, I'm Fred Vobbe, W8HDU, reporting for Newsline
--

You can see some of the damage from the storm at Fred's web site, www.vobbe.net/weather.

And one last thought: The tornadoes of November 11th are another reminder of the way a disaster can occur at any place and at any time. And when there is no other way to communicate ham radio is always ready to step in. (ARNewsline™)

**

RADIO HORROR: AMATEUR OPERATOR MURDERED IN GAMBIA

A United Kingdom ham has been killed while on vacation. And as Jeramy Boot, G4NJH, tells us, it appears as if he was the victim of a rather violent crime.

--

Ron Ford, G3NKO, has been murdered while visiting the Gambia. Ron, from Waterlooville in Hampshire, had built his own holiday accommodation in the Gambia, from where he operated as C56RF.

His body was found at the end of October and has been brought home for burial. It is thought that Ron was the victim of a robbery and the circumstances of the murder are now being investigated by officers of the Metropolitan Police.

Ron was an active member of the Royal Signals Amateur Radio Society, and was a regular check-in on the RSARS international net on 20-meters SSB from the Gambia. He had also held a number of other DX calls, including MP4BFH in Bahrain, MP4TBV from theTrucial States, VS2FN in Malaya and VS9AFR from Aden.

Jeramy Boot, G4NJH.

--

As we go to air there has been no word from Gambian officials on where its investigation of this crime is leading. (GB2RS)

**

RADIO SECURITY: BE CAREFUL WHAT YOU SAY ON THE AIR

Use discretion an the air and help defeat the terrorists. That's the sub title of Bill Sexton's MARS column appearing in the December issue of Worldradio Magazine. And in it, Sexton, who holds the call N1IN says that American's now face a new concern over the indiscreet transmission of material that my seem harmless but which could be used against us by a terrorist enemy.

By way of example, Sexton cites the well published airline schedules that were used by al-Queda terrorists to coordinate their September 11th attacks on New York and Washington. This is material still available on every airlines website.

Sexton says that we all must all be concerned with what the military calls Operational Security or OPSEC. And he indicates that it is very important for hams to consider what they are saying on the air because you can never tell who listening in. And he says that even the most seemingly innocuous tidbits of information, monitored by hostile ears are probably being handed on to the enemy’s intelligence analysts in the hope it will reveal some weakness or secret that can be used against us.

Sexton covers quite a bit about domestic security and how you can do your part. You will find it beginning on page 50 of the December issue of Worldradio Magazine. More information is on the web at www.wr6wr.com. (Worldradio)

SPECTRUM POLICY: FCC CHAIRMAN WANTS TO REVAMP THE NATIONS RF AIRWAVES

The government's top communications regulator wants to revamp the nation's current policy on use of the public the airwaves. Bill Pasternak, WA6ITF, has the details:

--

Federal Communications Commission Chairman Michael Powell says that he rejects the notion that there is not enough spectrum to go around for those who want it. And the FCC leader is proposing an almost total overhaul of the nations telecommunications policy involving radio frequencies used for everything from television broadcasts to wireless Internet devices and everything in-between.

Powell says he hopes technology and new FCC policies will take advantage of all empty and underused spectrum, possibly by using time sharing techniques. He says that recent tests conducted by his agency in five major U-S cities show that there are many under utilized spectral parcels available for sharing. This is especially true when some frequencies are used only at certain times of the day and are otherwise left empty.

What is evident is that the FCC is looking at ways to better utilize every hertz from D-C to light and beyond. And if a mandatory sharing of most spectrum is put in place there’s a good chance that all hobby and personal radio -- including ham radio -- will be sharing in some future yet to be established all-digital domain.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF.

--

The frequency bands referred to by Chairman Powell were not detailed in the news release. (Various FCC and other news releases)

**

SPECTRUM POLICY: AUSTRALIA ISSUES PAPER ON SPECTRUM USE

The United States is not the only place where spectrum use and bandspace is an issue. It’s also under study in Australia where Q-News Trevor Tague, VK4BAT, tells us what the Australian Communications Agency is doing:

--

The ACA has prepared a Discussion Paper outlining a range of issues relating to the operation of spectrum licensing and posing some questions for discussion.

The paper does not attempt to present the ACA's assessment of these issues but rather aims to provide a starting point for industry debate about the effectiveness of the spectrum licensing concept in the light of experience since its implementation in Australia some five years ago.

Trevor Tague, VK4BAT, reporting for Q-News.

--

The Australian Communications Agency is soliciting input on this matter from the citizens of V-K. (Q-News)

**

HAM RADIO EDUCATION: THE BIG PROJECT KEEPS GETTING BIGGER

Back here in the United States, the December issue of QST will feature an article on the American Radio Relay League’s Education and Technology program better known as “The Big Project”. And, according to an Internet posting to QRZed dot com by League President Jim Haynie, W5JBP, the program which got off the ground late last year grew to 26 schools in 2002.

When President Haynie proposed this project to the League’s Board of Directors, he said that it should be funded by donations, not dues. That’s exactly what has happened and he now says that he is gratified at the results to date.

W5JBP says that the Amateur Radio community has sent a loud and strong message that this is something that they want. He adds -- and we quote: “I, and the entire ARRL organization want to thank you for that support.”

At least 14 more schools are lined up to join the Big Project in 2003. The full text of Jim Hayne’s posting is at www.qrz.com. (Adapted from QRZ.COM)

**

ENFORCEMENT: WASHINGTON LAW NAILS SPAMMER

An Oregon man was ordered to pay nearly $100,000 in the first case brought under Washington state’s tough law against "spam" e-mails. Attorney General Christine Gregoire's office estimates that 28 year old Jason Heckel of Salem, sent as many as 20,000 unsolicited e-mails to Washington residents in 1998, trying to sell a $39.95 booklet called "How to Profit from the Internet."

The case was the first brought after the Legislature banned commercial e-mail with misleading information in the subject line, invalid reply addresses or disguised paths of transmission. Judge Douglass North ordered Heckel to pay a $2,000 fine and more than $94,000 in legal fees.

Heckel didn't appear in court. His lawyer Dale Crandall said he plans to appeal, Crandall says that state anti-spam laws violate the U.S. Constitution's protection of interstate commerce. (Published news reports)

**

ENFORCEMENT: OHIO HAM AGREES TO VOLUNTARY SUSPENSION

An Ohio ham has agreed to a voluntary one year suspension of his operating privileges. This after the FCC accused him of interfering with a Cincinnati area repeater system. The FCC’s Daryl Duckworth, NN0W, explains:

--
Duckworth: “The Enfocement Bureau, by agreement, imposed a one year suspension on Gary R. Weiler, KI8DI, for interference to the K8CLA repeater system in Cincinnatti. The interference occurred in March.”
--

Back in September the FCC sent Weiler a Warning Notice that alleged on several occasions he had deliberately interfered with the K8CLA repeater. That system is operated by the Cincinnati Amateur Radio Club which the FCC says assisted in tracing the interference to Weiler. By agreeing to the one year suspension Weiler avoided harsher enforcement action that could have included a hefty fine and the possible revocation of his amateur license. (FCC)

**

REPEATER COORDINATION: METROCOR SAYS COORDINATION IS BACK IN NNJ-NYC-LI

Repeater coordination appears to have returned in and around the New York City area appears. This with word that MetroCor has issued its first coordination documents on October 24th to repeater systems that have had no changes from their prior coordination.

This marks the first time for any organization to issue any coordination documents within the area since the collapse of the Tri-State Amateur Repeater Council several years ago. All repeaters in the New York City, Northern New Jersey and Long Island New York areas are being asked to file with MetroCor by December 1st so that it can meet the submission date deadlines of the various repeater directories.

More information and necessary documents are in cyberspace at www.qsl.net/metrocor. (MetroCor)

**

RADIO LAW: COURT STRIKES DOWN DESCRIPTIVE VIDEO FOR THE BLIND

Bad news for the visually impaired. A Federal appeals court says that the FCC overstepped its authority in ordering broadcaster to provide descriptive video to accommodate the blind. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--
On Friday, November 8th the U.S. Court of Appeals for the District of Columbia Circuit threw out Federal Communications Commission rules requiring television programs to include these oral descriptions of the action on the screen. In rendering its decision, the court said that Congress did not give the FCC the power to order the creation of this service.

The court maintained that Congress only authorized and ordered the commission to produce a report on how best to accommodate the needs of the visually impaired. Nothing more and nothing less. And that it definitely did not direct the agency to create a federal mandate that a descriptive audio service be made mandatory.

Under video description, a narrator describes the action during natural pauses between dialogue. The description is available on the secondary or SAP audio channel which is usually used for second language broadcasting.

The Motion Picture Association of America had challenged the rules in court. It claimed that the FCC was not authorized to issue them. Now, the U.S. Court of Appeals for the District of Columbia Circuit says that it agrees.

For the Amateur Radio Newsline, I'm, Bruce Tennant, K6PZW, in Los Angeles.
--

Blind advocacy groups are criticizing the court decision. They say its a setback for those who are visually impaired. (Published reports)

HAM RADIO BUSINESS: KENWOOD TO RESTRUCTURE

Some big changes at a company considered one of ham radios "big three. Ken Butler, W1NNR, tells about the news coming from Kenwood:

--
Kenwood Corporation is merging five U.S. based subsidiaries. As part of the

restructuring, Kenwood will combine home and car audio marketer Kenwood U-S-A, its repair company Kenwood Service, Kenwood Communications and Kenwood Systems with their parent Kenwood Americas. The merged entity will simply be called Kenwood.

As part of the merger, Kenwood will expand its U.S. based home and car audio engineering team. The communications business which includes Amateur Radio products will continue to maintain its own sales and marketing staff. The consolidation won't shut down any offices or warehouses and the company plans to add people in an engineering capacity.

Ken Butler, W1NNR.
--

The changes here in the United States are a are part of a total Kenwood corporate restructuring announced earlier this year. (ARNewsline™ from press release)

**

OUR HERITAGE: KFBK AT AGE 80

Former Amateur Radio Newsline reporter Ross Du Clair, WA6VWY, passes along word that Sacramento California radio station has made history. This, as KFBK-AM 1530 celebrates its 80th birthday this month.

Ross is the Chief Engineer for several stations including KFBK. He says that his station began as the broadcast arm of McClatchy Newspapers in February of 1922. McClatchy is best known as the publisher of the Sacramento Bee.

Today KFBK is owned by Clear Channel Communications, of Austin, Texas. Over the years, KFBK engineers contributed many innovations to the radio broadcast industry. This includes the creation of the Ampliphase Modulation system adopted by RCA.

The station officially celebrated its "birthday" Friday 8 November 2002 at the Sacramento Hyatt Regency. The legendary Rush Limbaugh was to be the guest of honor. Limbaugh began his meteoric rise in talk radio from the studios of KFBK. (WA6VWY)

**

HAM RADIO IN SPACE: ISS EXPEDITION 6 ARE ALL HAMS

The new ISS Expedition 6 crew are all of licensed radio amateurs. They are U-S Astronauts Ken Bowersox KD5JBP and Don Pettit KD5MDT. Leading the team is Russian Cosmonaut Nikolai Budarin R-V3FB.

The launch of Space Shuttle Endeavour was planned for November 11th. It was halted only minutes before liftoff when a small oxygen leak was detected. A new launch date is tentatively set for Monday November 18th.

The STS-113 flight of Space Shuttle Endeavour is scheduled as an 11-day mission. During the seven days the shuttle will be docked to the Station, three spacewalks will be performed in addition to delivering the new crew. (AMSAT)

**

HAM RADIO IN SPACE: THE LEONID METEORS ARE COMING

Sky & Telescope magazine reports the Leonid meteor shower is due to sweep across Earth during the early morning hours of Tuesday, November 19th. If the weather is clear, we could be in for a grand celestial show. And many meteor scatter enthusiasts are expected to be on the air attempting to make contact by bounding signals off the ionized meteor tails as they burn up in the planets atmosphere. (Various sources)

**

INTERNATIONAL - CANADA: RAC VP RESIGNS

Radio Amateurs of Canada has announced the resignation of is First Vice President Joe MacPherson. MacPherson cited irreconcilable interpersonal differences with some members of the Board of Directors as the reason for his reason to stand down from the RAC Executive. A replacement for MacPherson will be named within next few weeks. (RAC)

**

CONTESTS

Turning to the contest calendar, word that the Bulgarian L Z DX contest begins at 12:00 U-T-C on Saturday November 16th and runs for 24 hours. This is a C-W only event taking place on 80 through 10 meters. The approved contest exchange is an R-S-T report and your I-T-U Zone. (GB2RS)

**

DX

In D-X, word that OH0Z on Aland Island will be active during the November 23rd to the 24th CQ WW CW Contest. He will be operating in the single operator, all band category. QSLs via Ari Korhonen, OH5DX, at his callbook address. (GB2RS)

And KX7YT is active on 10, 15 and 20 meters SSB and PSK31 as S-21-Y-V from Bangladesh. He will be there through the 4th of December. Q-S-L this one as directed on the air. (Modern DX)

Higher in frequency, the GB3VHF 144 MHz propagation beacon was removed from service on November 2nd for maintenance and was expected to be for one week. (RSGB)

And the GB3BUX 50 MHz beacon has suffered antenna damage due to storms a couple of weekends ago. It is currently running at reduced capability as a result. Its sponsor says that repairs will be made as time and weather conditions permit. (RSGB)

**

THAT FINAL ITEM: FCC HONORS WORLD WAR II COMANCHE CODE TALKERS

About a year ago Amateur Radio Newsline told you about a very special group of Native Americans who's linguistic ability made battlefield communications secure during World War II. Now, the Federal Communications Commission has taken the time to honor this group for id dedication to our nation. Amateur Radio Newsline's Norm Seeley, KI7UP, has the rest of the story:

--

The Comanche Code Talkers were members of a specialized communications unit of the U.S. Army 4th Signal Corps. And using their ancestral Comanche language they created an unbreakable code used by Allied Forces on the battlefields of Europe. Now, decades later our own Federal Communications Commission has paused to honor this group of Native Americans for their meritorious service to our nation.

Charles Chibitty of Tulsa, Oklahoma was the FCC's guest of honor at the recent ceremony. He told how he and 16 other young men, who had grown up together and were all members of the Comanche Tribe of Oklahoma, used the Comanche language and their Army communications skills to create a military intelligence code that was never broken by the enemy.

Even more interesting, Chibitty also shared anecdotes from their enlistment and training. He explained that they even had to create Comanche code words for "bomber" and "tank." These are words that did not exist in the Comanche language.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

Chibitty is a decorated veteran and the last surviving member of the 16 Comanche Code Talkers. You can read more at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-228074A1.doc (CGC Communicator, FCC)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. I am looking for recommendations for a VHF Amp for my FT-847........I am a
new Technician and the power I have is not cutting it for my Antenna height.
I am using a duplexer since I have a dual band antenna MFJ Pulsar 2/70cm I
assume with an amp that this will not be a problem but understand I should
turn my amp off when I decide to go on UHF...There's not any UHF traffic
here in Northern Delaware anyway. I was looking at the Mirage that allows 10
watts in 160 out and I am using an Astron PS model VS-35...it can do
35Amps...any help on recommendations will help as I will inquire on the air
and get myself educated. Thanks
KB3IUL Mike

Selling an Icom w32a in as new condition. Will be shipped in original box
with original manual/quick programming reference and stock antenna, battery
and charger. This h/t has very little use, (used primarily as a scanner).

Asking $200.00 + $10.00 shipping/ins.

Please e-mail direct.

Someone has been kind enough to enter the info from the Silent Key column in
QST, from 1993 to the present, into a database. It may be viewed at
www.cebuana.net/qst-sk.html

Beware that it is a very large file and takes a while, especially if you
don't have DSL, T1, or cable access.

Also be aware that deaths are listed in the SK column only if someone
reports them to the ARRL-- i.e., many deaths are not reflected there.

If you go to www.cebuana.net I think you'll find a way to download your own
copy of the file, either in MS-Excel or MS-Works database format. Either
way, beware that it's LARGE.

I would like to replace the 2SB754 (Q51) with
the 2SB688 for better modulation.

What are the pros and cons to making this
radio modification ?   Would it be harmful
to use a power mike once done ?

Anything else needed to be done once this
transistor is replaced ?

Any other diodes or resistors needed to be addressed ?

Amateur Radio Newsline™ Report 1316 – November 1, 2002

Amateur Radio Newsline report number 1316 with a release date of Friday, November 1st, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

A child is saved thanks to C-B radio in Australia and Ireland opts to restructure with slow-code. These stories are first on Amateur Radio Newsline report number 1316 coming your way right now.

RESCUE RADIO: CB HELPS SAVE HAM RADIO OPERATORS DAUGHTER’S LIFE

The daughter of a ham radio operator is alive after he to turns to C-B radio for help. It happened down-under in Australia as we hear from Q-News Graham Kemp, V-K-4-B-B:

--

Recently on holiday at Finley, S. NSW, Eric VK2TRD's daughter Tegan, 12, had a very narrow escape, after she was bitten twice by a Tiger Snake! After emergency treatment at Finley Hospital she was transferred by Ambulance to Shepparton, Vic.

Travelling to Shepparton Eric called five times on the 2m repeater seeking guidance to the Hospital, no response. Disgusted, he called on the UHF CB repeater and got instant help.

Over 6 days there, nothing was heard on the repeater but the ident., and that was when Eric fired it up. On 2m simplex, only 2 farmers using it as an intercom, no c/s's.

Tegan, that night suffered cardiac respiratory arrest and was in intensive care for two days. Now at home she is doing OK. A traumatic time for all.

For the Amateur Radio Nrewsline, I’M graham Kemp, VK4BB of Q-News Australia.

--

Once the ordeal was over, VK2TRD paused to thank all who helped in his daughters rescue. This included the Shepparton CB’ers for their immediate response.

**

RESTRUCTURING: IARU REGION I MEETS NOV 10

The International Amateur Radio Union Region 1 Conference is slated for the tiny nation of San Marino beginning on November 10th. And according to the W5YI Report’s Fred Maia, it could be a rather hot meeting. The reason -- two words: Morse code.

Writing in the November 1st issue of his newsletter, Maia says that the subject of Morse proficiency testing among those serving on the High Frequency Committee is shaping up to be controversial. On one side are two giants. Germany’s Deutscher Amateur Radio Club and the Union of Russian Radio Amateurs are two national societies who are already on record as opposing dropping Morse testing as an international requirement.

Leading the charge to eliminate manual telegraphy tests is the Radio Society of Great Britain. It says that Region 1 if the International Amateur Radio Union should formally endorse the October 2001 resolution of the IARU Administrative Council in respect to abolishing mandatory Morse exams.

Both the Deutscher Amateur Radio Club and the RSGB have submitted well crafted conference documents stating their respective positions. How this will all work out will be known at the close of the conference on November 15th.

**

RESTRUCTURING: IRELAND ADOPTS 5 WPM

Meantime, restructuring and slow code have come to Ireland. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the details:

--

According to Echo Ireland, that's the journal of the Irish Radio Transmitters Society, a set of new amateur radio regulations were signed into law by the Regulator in the Republic of Ireland on September 11th. The newws is just getting out and the main points of the new regulations governing ham radio are as follows.

First, the Morse code test speed has been reduced to 5 words per minute to bring it in line with whats become the defacto world wide standard. More important, that there is no longer any age restriction on a persoin getting an Irish ham radio license. This means that anyone -- any age in Ireland can brccome a ham. And up until now, there had been a probationary period of a year before a Full Licence could be issued. Now, thats gone too.

On the technical side, the maximum power permitted on each band is now listed in decibles per watt R-M-S at the output of the transmitter. This is good news because it effectively allows a power increase for Irish amateurs. The old regulations specified that limits were regarded as input power rather than measured at the R-F output jack.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

We will have more news from around the world later on in this weeks Amateur Radio Newsline report.

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Amador County Amateur Radio Club Net serving Pine Grove California.

(5 sec pause here)

**

ENFORCEMENT: YOU CANT USE THOSE RADIOS ON FIRE CHANNELS

Back on this side of the Atlantic, the FCC has told a fire department to stop using illegally modified ham radio gear. The FCC's Daryl Duckworth, NN0W, explains:

--

Duckworth: "The Enforcement Bureau has notified the Bon Secour Fire and Rescue Department in Alabama that the Amateur equipment they were using was contrary to Commission rules because it had been modified to operate on Public

Safety frequencies. The letter referred to several Icom IC-V8 handie talkies.”
--

The note went to Karl Bingert who is the Chief Bon Secour Fire & Rescue Department. It told him that the use of Amateur Radio units of any kind, modified to operate on its frequencies, is against the Commission’s rules and would result in enforcement action by the FCC. (FCC, RAIN)

**

ENFORCEMENT: FCC BACKS REPEATER OWNERS BAN OF UNWANTED USER

The FCC is once again backing up a repeater operator who wants to ban a particular user from the system. Its all taking place in Ohio. Again, the FCC’s Daryl Duckworth tells us about the situation and the agency’s position in favor of the people running the machine:

--
Duckworth: “The Enforcement Bureau sent a Warning Notice to Billy R. Marshall, N8ORF, warning him to stay off of the W8HFF repeater system in the Toledo Ohio area. The Toledo Mobile Radio Association had issued two letters to Marshall requesting him to stay off the repeater due to his failure to follow operational rules.

The Enforcement Bureau reminded Marshall that control operators may take whatever steps are necessary to insure complience with the rules and that they will be backed up by the Commission”
--

Marshall was given 20 days from the date of receipt of the FCC letter to reply and outline what steps he has taken to comply. (FCC, RAIN)

**

ENFORCEMENT: PHONE COMPANIES FINED

Two companies have learned the expensive way that it does not pay to try to grab another telephone company’s customers. This, as the FCC issues two Notices of Apparent Liability proposing a total of $6,560,000 in fines against two operator service providers for taking advantage of consumers.

The companies named are Opticom Corporation and ASC. The FCC says that the massive fines are based on Opticom apparent sixty-four violations, and another eighteen apparent by ASC. The term apparent is the FCC’s way of alleging a violation has taken place. The Commission says that it calculated the proposed fines by using the $80,000 per violation amount previously used in cases involving egregious slamming. Take your browser over to http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-226534A1.doc to learn more. (FCC)

**

RESCUE RADIO: EMCOM SUSPENDS NATIONAL EMERGENCY ALERT NOTIFICATION SYSTEM

EMCOM -- the emergency alerting system has suspended its the National Emergency Alert Notification System operations effective October 25th. Our producer, Bill Pasternak, WA6ITF, has the nitty-gritty:

--

In making the announcement, EMCOM officials said that what they term as a stand-down also affects the Emergency Information Web Sites maintained by EMCOM for every state, county and municipality in the nation. Also impacted are over 1 million other web pages that reportedly utilized the automatically updated EMCOM Homeland Security Status Bar or the PubAlert notification bulletin pop-up system.

By way of background, for the first six months after the 9/11 tragedy, EMCOM offered to provide access to full use of the system to any community's emergency agencies for $500 per month. During that period there were no takers, even though EMCOM had notified almost every senator, representative, and agency in the nations capital.

So the bottom line is this: The EMCOM alert system is dead for now but hopefully not gone forever.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

In making the announcement, EMCOM took the opportunity to express its gratitude to the hams, ARES and RACES operators who helped to get the system off the ground.

More about EMCOM is on the web at www.comdinet.com/emcom (EMCOM release)

**

RESCUE RADIO: SKYWARN RECOGNITION DAY

On a more positive note, Larry Boyd, KB4GFT says in an Internet posting that The 2002 SKYWARN Recognition Day will occur on Saturday December 7th. It will begin at 00:00 UTC and run for 24 hours.

SKYWARN Recognition Day was created in 1999 by the National Weather Service and the American Radio Relay League. It honors the contributions that volunteer SKYWARN radio operators make to the National Weather Service.

Last year 80 National Weather Service offices participated. The list of this years participants and other information is on the web at hamradio.noaa.gov (KB4GFT)

**

RADIO RULES: RULES REWRITE ON MEDIA CONSOLIDATION

The Federal Communications Commission has embarked on a major rewrite of rules that limit the consolidation of media companies. The overhaul, which FCC officials first announced in June, is likely to conclude by the middle of next year when the agency issues final rules.

Many observers expect the agency to relax the current media ownership restrictions, although FCC officials stressed during a recent meeting that they had not reached any conclusions. The FCC is seeking comment on whether it should keep or change six specific media consolidation rules, including bans on common ownership of a newspaper and television station or television and radio stations in the same media market, as well as a limit on the percentage of the national audience that any station may reach.

Many of the rules were written decades ago before cable and satellite-based television and the Internet. The proceeding is being conducted under a statute that requires the FCC to periodically review its rules to determine whether they remain in the public interest. (FCC)

**

COMMUNICATIONS LAW: JUDGE THROWS OUT PAY AS YOU CLICK CASE

Its a big court win for all of us. This as a federal court says no to a law suit that could have cost all of us a lot of dollars as we clicked our way across the World Wide Web. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

U.S. District Judge Colleen McMahon has rejected a claim by the B-T Group that it owns the patent on those single-click hyperlinks that make the Web what it is. It's lawsuit accused Internet service provider Prodigy Communications Corp., of infringing on the B-T patent.

But Judge McMahon rejected the claim that each Web server on the Internet is a central computer and thus the Internet falls within the patent's scope. Her decision, filed in a White Plains, New York Federal Court concluded that no jury could find that Prodigy infringes on the B-T patent.

The B-T suit had been viewed as a test case that could have opened the door for the company to challenge other Internet service providers and demand licensing fees. These fees could have added a lot to the annual cost of anyone surfing the net.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.
--

With the potential of billions of dollars at stake, its not known if B-T Group will appeal the judges decision or re-file the case. (Published news reports)

**

HAM RADIO TRAINING: AMATEUR RADIO LICENSE GUIDE – THE PROGRAM

Stuart Cole, N5LBZed, tells us by e-mail about a computer program that he has just finished writing. Its called "Amateur Radio License Guide" and is a modern update of the DOS version that he brought out back in 1999.

According to Cole, the program is based on the official ham radio question pool, is divided into three sections and does cover training all classes of license. More information is in cybrspace at http://cableone.net/sacole/ (N5LBZ)

**

THE WORLD ABOVE 50 MHZ: WRITER ASKS YOUR HELP

Gene Zimmerman, W3ZZ, says over the VHF Reflector that his next World Above 50 MHz column in QST Magazine will include a discussion of VHF+ clubs and groups. This refers to weak signal groups that meet regularly, VHF groups that sponsor annual conferences like Central States VHF Society, contest groups and others interested in the non-repeater world of VHF and UHF communications.

Gene says that he has already mined a lot of data from Internet sites but I would like his information to be accurate and up to date. He has identified the PackRats; the Rochester VHF Group, the South East V-H-F Society and about a dozen others as falling into this category. He asks that anyone connected with these groups please contact him by e-mail to confirm the information he already has. He also wants a person or point of contact to send readers to if someone wishes to find out more information about how to particular group. Gene’s e-mail is w3zz@arrl.org. (VHF Reflector)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

EMERGING TECHNOLOGY: AM MODULATION IMPROVEMENT ANNOUNCED

A new modulation technique for AM broadcasting is being promoted by broadcast industry pioneer Mike Dorrough, KO6NM. Dorrough claims the Advanced Modulation System can increase carrier modulation to 200% while improving the performance, range and sound quality of Amplitude Modulated radio.

According to the CGC Communicator, KO6NM recently discussed the system at an SBE meeting in Sacramento and plans other presentations.

Ross du Clair, WA6VWY is the Chief Engineer for Clear Channel in Sacramento. He attended the Sacramento meeting and is quoted in Radio World On-Line as saying, "This is real and it does work."

As previously reported, Mike Dorrough was the recipient of the National Association of Broadcasters Radio Engineering Achievement Award in 2000. This, for his contributions to audio processing and signal monitoring. Details of the new Advanced Modulation System will appear in an upcoming issue of Radio World magazine. (CGC Communicator)

**

EMERGING TECHNOLOGY: PERSONAL LOCATORS FOR KIDS

In the wake of multiple child abductions, parents are turning to satellite-based locator bracelets to track their children. The bracelets carry transponders that will permit parents keeps tabs on their kids over via the Internet or by telephone.

Wherify Wireless plans to release its three-ounce G-P-S equipped Personal Locators next month. The device uses satellite and cellular technology and has a built-in numeric pager. It allows the wearer to contact an emergency law enforcement service in worst-case scenarios

Each unit costs 400 dollars and is accompanied by about 30 dollars in service fees. Experts on missing children warn such devices are not foolproof and could give parents a false sense of security. Still many parents are willing to try the locators a try. (Scienceonline)

**

RADIO IN SPACE: SOYUZ FLIES AGAIN

Some good news for the astro-ham team on board the International Space Station. The Soyuz rockets are flying again.

On Wednesday October 30th a manned Soyuz rocket with three cosmonauts on board blasted off from Russia's Baikonur cosmodrome bound for I-S-S. The Soyuz-TMA booster rocket lifted as planned at 03:11 GMT with no reported malfunction on its way to orbit.

As reported last week, the launch of this Soyuz was delayed after the fatal crash of a similar design unmanned cargo rocket October 15th. During this Soyuz 12-day mission, the Russian and Belgian crew will replace a rescue capsule docked at the ISS. (Published reports)

**

CONVENTIONS/HAMFESTS/CONFERENCES: MARTLESHAM MICROWAVE IN NOVEMBER

Turning to the ham radio conference scene, work that the Martlesham Microwave Round Table 2002 will be held this year at Adastral Park, Martlesham Heath, England. The dates are Saturday the 9th and Sunday the 10th of November. Highlights include a visit to the Royal Air Force’s Defense Radar Museum at R-A-F in Neatishead and an evening dinner in Ipswich. All of this plus the usual flea market, lectures and the UK Microwave Group Annual General Meeting. For ore information e-mail g3xdy@btinternet.com (GB2RS)

**

CONVENTIONS/HAMFESTS/CONFERENCES: EUROPEAN RADIO SYMPOSIYUM IN BARCELONA

The 2002 European Radio Symposium is slated for November 13th in Barcelona, Spain. Convergence, digitization and electronic audience measurement will be key topics tackled in this symposium. Speakers include David Rogerson of Strategic Media Solutions. (Media Network)

**

CONVENTIONS/HAMFESTS/CONFERENCES: BIG TURNOUT FOR ARRL/TAPR DCC

According to a recent ARRL Letter over a hundred the worlds most active Amateur Radio digital enthusiasts turned up in Denver, Colorado, September 13th to the 15. This, for the 2002 joint ARRL and TAPR Digital Communications Conference.

This marked the 21st such Digital Communications Conference held. The agenda ranged from Automatic Position Reporting System topics to high-speed digital networking and software-defined radio. All agree it was well worth the trouble of traveling to the mile-high city to attend. (ARRL)

**

DX

In D-X, word that 3D2AG, will be working on Rapa Island through the 28th of November. He plans to operate as FO5RK on CW and SSB. This, during his late afternoon, nighttime and early morning hours. Rapa is part of the Austral Island group. (RSGB)

And SMZ0WKA is in Cuba until the 10th of November and is active as T48W. Look for him on 160 through to 6 meters, with an emphasis on the lower bands. QSL this one as directed on the air. (RSGB)

**

THAT FINAL ITEM: W6XYZ/KTLA AT 60

And finally this week, one of the nations pioneering television stations is in the midst of celebrating its 60th anniversary. That station is KTLA television in Los Angeles. And almost from its inception, ham radio has played a role in its success. Roy Neal, K6DUE, takes a look at KTLA and some of the hams who helped it to make history:

--

DATELINE “HOLLYWOOD.”   ON A HIGH AND WINDY HILL, OVERLOOKING THE FAMOUS DISTRICT OF LOS ANGELES, IN GIANT BLOCK LETTERS, THERES A SIGN THAT READS HOLLYWOOD. AT THE TOP OF THE HILL, THERE’S ALSO A RADIO TOWER WITH A HISTORY. THAT’S THE SITE OF THE FIRST TELEVISION STATION WEST OF THE MISSISSIPPI.

IT WENT ON THE AIR IN SEPTEMBER OF 1942 AS W6XYZ, AN XPERIMENTAL TELEVISION STATION WITH STUDIOS ON THE PARAMOUNT FILM LOT. IN OCTOBER OF 1942. THE STATION EVEN BROADCAST INSIDE A MOTION PICTURE STUDIO, FEATURING THE MOVIE "THIS GUN FOR HIRE."

BY 1946, W6XYZ WAS GONE, REPLACED BY THE CALL KTLA. THE GUIDING GENIUS BEHIND THE STATION WAS KLAUS LANDSBERG, WHO CAME TO THE UNITED STATES AFTER ESCAPING FROM NAZI GERMANY. IN THE LANDSBERG BOOK, NOTHING WAS IMPOSSIBLE. SO KTLA RACKED UP AN IMPRESSIVE LIST OF FIRSTS WHILE PIONEERING TELEVISION.

ON THE FIRST OF JANUARY, 1946, THEY BROADCAST THE TOURNAMENT OF ROSES PARADE…LIVE. IN 1955, KTLA BECAME THE FIRST LOS ANGELES STATION TO BROADCAST THE PARADE IN COLOR.

IN MAY OF 1952, LANDSBERG DROPPED RELAY STATIONS ON MOUNTAIN TOPS TO BEAM AN ATOMIC BOMB TEST FROM NEVADA TO LOS ANGELES. HE CALLED IT OPERATION BIG SHOT.

AND IN MAY OF 1958, BUYING EQUIPMENT FROM NBC, KTLA WENT ON THE AIR WITH ITS TELECOPTER…A HELICOPTER EQUIPPED TO COVER LOS ANGELES FROM THE AIR!

ONE OF THE MOST POPULAR SHOWS LANDSBERG PRODUCED WAS LAWRENCE WELK, A PROGRAM THAT STILL EXISTS IN SYNDICATION.

MANY OF THE STATION'S ENGINEERING STAFF WERE RADIO AMATEURS. FOR EXAMPLE, THE INVENTOR OF THE HAM RADIO REPEATER, THE LATE ART GENTRY, W6MEP. THIS REPORTER REMEMBERS MANY FUN TIMES WHILE TALKING WITH THE AVUNCULAR MR. GENTRY FROM THE REPEATER SITE ONCE OCCUPIED BY W6XYZ.

IN 1964, FILM AND TV STAR GENE AUTRY BOUGHT THE STATION AND AMONG THE ENGINEERS HE BROUGHT IN WAS LOYD SIGMON, W6LQ. "SIG" IS PROBABLY BEST KNOWN AS THE FATHER OF THE SIGALERT TRAFFIC MONITORING AND PUBLIC ADVISORY SYSTEM.

W6LQ AND W6MEP WERE TWO OF THE BETTER KNOWN HAMS WHO HELPED KTLA AS THE STATION PIONEERED EARLY DAY TELEVISION UNDER THE GUIDING AEGIS OF KLAUS LANDSBERG.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE
--

KTLA is owned these days by Tribune Broadcasting and is part of the Warner Brothers -- or W-B Television Network. More important, its history is one rich in break-through technology and innovation. Its a pioneering station that made television happen. You can read more about it in cyberspace at the website you will find in this weeks amateur Radio Newsline report.

More on the fascinating history of W6ZYZ and KTLA is in cyberspace at http://ktla.trb.com/about/station/ktla-about-history1.htmlstory (Tnx K6DUE, CGC Communicator, others)

900 MHz 8 Cavity Duplexer
Compact Duplexer with Circulator

This Duplexer came from an older 900 MHz linking radio system. It is presently tuned for 895.90 MHz TX and 934.70 RX, making it very suitable for the 900 MHz Ham band. It came out of service, so should be working fine, but it comes AS-IS.

$150 plus shipping

Lord! I'm in a small room with three high powerd computers, three radio stations, and Alpha 76 (old sucker). I can't even hear the phone ring out in the next room.

The MFJ number doesn't mean much to me (I'm to lazy to go dig out a catelog and look), but I'd not expect the fan to be loud. Most solid state amps up to a couple hundred watts don't even have fans.

> Does anyone have the Astron RS-35A power supply, or other in the 40-35 amp
> range? Is the fan loud?

I have the Astron 50 amp and it's pretty much silent.

Folks,

I need to tune my Alpha Delta DX-EE multiband trap/parallel
dipole.

My question is, there surely must be interaction between
the wires, so which bands do I tune first? 10 Meters
first and 40 meters last?

or the other way around...

10 meters is dedicated wire
15 meters is dedicated wire
20 and 40 are shared with traps (ok, Alpha Delta
    calls them ISO-RES coils)

```
40 Meters        20 Meters     20 Meters         40 Meters
--------||||||-----------------------------||||||---------=20
                 -----------/|\----------- 15 Meters
                       ----/ | \---- 10Meters
                             |
                             |
```

Thanks,
George

...
>This calculation is, at best, a rough guide

The BMI survey alone does not indicate percent body fat. However, this data coupled with visual observation of Hams would strongly indicate that Hams are fat. Just attend a random hamfest and you will see the demographics.

From going to Hamfests, it is clear that Hams are 95%+ male, 50% old, and (rough guess) 25% fat. Having been to several Hamfests (for the technical presentations), one can observe that Hams are more fat than the general poplulation. The demographics make Ham Radio appear suspect, especially to the non-Ham. (Although, there is nothing wrong with being male, old, or fat).

When Hams try to recruit new people, it is really the chance to join a fraternity (or cult). It is not joining a hobby, at least not in the traditional sense.

George,

With parallel dipoles, the longest wire has more effect on the shortest. =
Whereas, with a trapped dipole, the higher frequency has to be adjusted =
first. Since the 20/40 is the longest wire, I would adjust:
20 first
40 second
15 next
10 last

After you have done that, you may have to repeat the whole think. I have =
multiple dipoles at 12, 17, and 40 meters (no traps). When I ran the =
thing on EZNEC, the only way I got it to converge was to go 40>17>12. =
This worked out in the real world. Your 20 m trap will probably prevent =
the 40 m from interfering with the 15.

I need to tune my Alpha Delta DX-EE multiband trap/parallel dipole.

My question is, there surely must be interaction between the wires, so which bands do I tune first? 10 Meters first and 40 meters last?

or the other way around...

============================

There is no answer to your questions. Every antenna system is a victim of its own environment, height, sloper or V, soil characteristics, adjacency to mast and buildings, etc., etc. Adjacency of one wire to another, number of bands of interest.

When someone has pruned lengths to his satisfaction by trial and error, in his own particular surroundings, ask him to take down the antenna and accurately measure all dimensions. And then copy it. There is a small probability you may be satisfied yourself. Your transmission line length and Zo will inevitably be different.

What do you anticipate saving from your efforts? A tuner ? No hope !

Just erect a single-wire random length dipole, with a balanced feedline of any sort, also of random length, get a tuner, and you will have an efficient radiating system which will give you ample satisfaction for a few months until you become bored (like most of us) and develop a longing to try something else.

Having learnt something you will be then be free to occupy your mind on more important (to you) matters. And your tuner will ALWAYS be useful.

Having said all that, you can be just as insanely happy struggling to tame your unruly, entirely incomprehensible multi-band, multi-wire dipole.

```

Have you contacted them to see if they have a tune up procedure?

Never seen one of these, let alone used one, but what I would do would
be to tune 20 meters first, since that would affect 40 meters.

40 Meters would be next, followed by 15 and then 10.

Jim

I am currently studying for my Amatuer License. I have been into radio a long time(SWL) and figure it's time. Is there much activity on 2m and 70Cm in Northern Delaware/Philadelphia area? How far can one get out with High gain ground plane approx 30' (This is only an estimate...I know!. Soon as I get my license I like to take part in QSO's and these answers would get me started as I don't have any gear to listen on until I decide what radio to buy. I am leaning towards the FT-847 or may just get a Dual Band mobile rig for base use. Thanks..may even consider local purchaseof used gear.
Thank you

>I am currently studying for my Amatuer License. I have been into radio a
>long time(SWL) and figure it's time.

That's the same path I followed into Ham radio...SWL... still do it alot.

>Is there much activity on 2m and 70Cm
>in Northern Delaware/Philadelphia area?

I haven't been in your area (was in Greensburg a few weeks ago) but, as a major metro area, I'd suspect there's dozen's of repeaters and lots of activity on 2m (probably some on 440 too) Should be lots of simplex QSO's going on too (scan 146.52 and nearby frequencies) Pick up an ARRL repeater directory for more info on local repeaters on ALL VHF/UHF bands. The following website will give you a list of PA repeaters...
http://www.artscipub.com/repeaters/dsprpts.asp?state=Pennsylvania&order=freq

There are other sources of info on-line.

>How far can one get out with High
>gain ground plane approx 30' up?

You shouldn't have much problem working almost any repeater you could hear (assuming 20-30 watts output) if your location is fairly elevated... terrain can make a huge difference.

>I am leaning towards the FT-847 or may just get a Dual Band mobile rig
>for base use.

Both would be great rigs for a base... you might want to consider a beam for an antenna though... they don't cost much more than the gain verticals (and have a lot more gain) and a TV antenna rotor will do nicely mounted on the chimney or some other high point.

Good luck in the pursuit of your license!

hi all

I'm not a ham, I'm a scanner enthusiast. I was wondering if anyone had any reviews on the Yaesu Vertex VX 150. I heard it has great reception but is hard to program. anyone with any info about it please email it to me

Thanx
Tom

I have one for ham usage.

Not sure it's the best choice if you are never going to get a ham
license, though. Just for scanning you might be better off with
something like the Yaesu VR-50, which has a wider recieve range, more
memories, and is built with a ruggedized chassis like the FT-50.

In any case, it is far easier to program these small units by getting
the software and interface cable and using a PC for programming.

Happy trails,
Gary (net.yogi.bear)

.>I used to work for a major radio mfr. of ham radios..and I have to say
>98% of radios taken in for repair had out of band mods.

I'm not a fan of modifications. How about building your own circuits?

>I really feel most of the bands SHOULD be given to commercial
>enterprises & leave only 2 metres for all the stupid conversations
>that normally happen between hams...

I have to disagree with you here. There are some amateurs that would like to utilize the bands and they should be allowed access to them. Having an amateur licence allows one access to those bands.

I see no reason to give these bands away to commercial enterprises. In the long run, amateur radio benefits Ham and non-Ham commercial enterprises. Eliminating bands would hurt the economy, not just Hams.

>.READ THIS HAMS!: use this new
>technology, called a"telephone" for your whining about
>bursitis..ohh.,, I'm sorry ..you can't brag about your 1kW linear (
>spelled penis extension) on the phone..darn it all!

I have to agree that Hams are weird and follow some kind of uninteresting cult. (Contesting is BORING, yet Hams seem to get a thrill out of it).

Ham Radio is 95% male, 50% old. Greater percentage overweight than general population. They tend to waste time contesting and believe this results in useful skills. "Tier II" Hams like Morse Code and do not believe you a "real" Ham unless you learn Morse Code.

The studies of the few support the propoganda of the many. However, "Amateur Radio" clubs are meetings of Hams to share their interest in appliance operation.

I am trying to modify a battery powered fm/am radio to recieve 2m. It uses a Sony CXA1691Bs IC. I have located what i think is the Local oscillator coil. Stretching this coil as much as i can (while still keeping it coiled) results in the top broadcast frequency (104.6) being right at the bottom on the 88Mhz mark of the tuning dial. this is not high enough to pick up 2m.what must i do to be able to reach these frequencies?

RATELCO Battery charger / Rectifier. Type FC481505A
Model # 102B-3608-00. 48 Volt @ 150 Amps, Float or Equalize.
These units were manufactured SEPT 1991 and are in the Factory
crates and have Never been used, have 2, sequential Serial numbers.
These units can be used as 48 volt charger for Telephone Central
Office Battery supply's with the ability to Float or Equalize.
They can also be used as a stand alone, well filtered, power
supply rated at 48 volts at 150 amps CONTINOUS DUTY.
Input = 110, 208, 240 Volts. 60 Hz, single phase
A must for the expirimenter working with the new generation
of 48 volt solid state RF devices Rated in excess of a Kilowatt.

Weight is approximately 550 pounds, Crated for freight shipping.

1500.xx Prepaid, in my garage in Merritt Island, Florida.

Loading and shiping are buyers responsibility.

Simply extending the range of a AM/FM radio to the 2m band will not enable you to recieve ham signals. The FM that is used for broadcast is actualy WFM (Wide Frequency Modulation) and takes more spectrum space than standard FM so that music can be transmitted. So, if you want to recieve ham signals on a AM/FM radio, your fist problem to solve is to narrow the bandwidth of your reciver when it gets to the 144-148 range.

73s,
Chris Duensing
KB9VJD/5

PS Sorry I can't help you with extending the range of your radio

Amateur Radio Newsline™ Report 1317 – November 8, 2002

Amateur Radio Newsline report number 1317 with a release date of hFriday, November 8, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Some good numbers for ham radio here and across the seas. The hobby is growing once again. Find out the details on Amateur Radio Newsline report number 1317 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: GOOD NUMBERS IN THE USA

The numbers are in and they speak for themselves. Restructuring is finally having a very positive impact on ham radio growth here in the United States. Amateur Radio Newsline’s David Black, KB4KCH, has the good word:

--
Last year at this time there were nearly 683,000 hams licensed by the FCC. As of October this year, there are 2235 fewer--but numbers are not always what they seem. The reality is that ham radio in the United States is growing once again.

First, the General and Extra class have increased substantially since the 13 and 20 word per minute Morse code exams were eliminated April 15th of 2000. In fact, the number of people holding these licenses has increased by well over 25,000 for each license class. And that's great news for ham radio equipment suppliers since they rely on higher dollar high frequency transceiver sales for much of their yearly income.

The Technician class is holding its own, too. The number of new Tech license holders is keeping pace with the number of hams either upgrading or dropping out of amateur radio. The net change is close to zero.

Only the Novice and Advanced classes are seeing significant drops in numbers. No new Novice or Advanced class tickets have been issued since April, 2000. And while existing licenses can be modified and renewed, it appears as if that's just not happening among Novices. They appear to be fading away, and quickly -- there were 65-thousand Novices in 1997 -- only about 37-thousand, though, today.

The bottom line is that for the last 12 months ham radio has seen an average of 16-hundred brand new ham licenses issued each month. That's an improvement of 160 a month over the previous year. And that improvement is very good news for ham radio.

As to the state with the largest number of hams? It's still California which can now claim being home to more than one seventh of all the nations hams. Latest figures show there are more than 100,000 hams now living in California.

The state with the fewest hams? North Dakota -- only 1575 hams there.

Reporting from the Amateur Radio Newsline's South-East Bureau in Birmingham, Alabama, I'm David Black, KB4KCH.
--

The bottom line is this. Restructuring seems to be doing the job it was intended to do. Its now up to those in the hobby to work to swell its ranks even more. (W5YI)

**

RESTRUCTURING: 5000TH UK FOUNDATION LICENSE CELEBRATED

The United States is not the only place where ham radio is growing. In the United Kingdom Andrew Finch, M3FMA, is only 11 years old and suffers from dyslexia. But nothing was going to keep the young scout from becoming a ham. And now he is the 5000th person to obtain that nations new and very popular Foundation Class license. Jeramy Boot, G4NJH, has more:

--
The Radiocommunications Agency has been so pleased with the numbers taking up the license, that it decided to commemorate the 5000th amateur with a special award. Alan Betts of the Agency's Amateur Radio section, commented: "The radio amateur community was around 50,000 strong before the new license was introduced, and so this level of interest is very welcome".

He also added "The License has proved very popular with young people and amateur radio is very much an up-and-coming hobby for them".

The presentation of Andrew's prize took place at a ceremony held at the Radiocommunications Agency's monitoring station in Baldock, Hertfordshire on Tuesday the 22nd of October. Andrew was also presented with membership of the Radio Society of Great Britain by its President, Bob Whelan, G3PJT, who also presented a host of radio amateur goodies and books.

Andrew's day was not over after the ceremony - he was given a tour of the Radiocommunications Agency monitoring station at Baldock. 'Heartbeat FM' from Hertfordshire then conducted an interview with him before he was whisked off for another interview with 'Dream FM' of Chelmsford.

Jeramy Boot, G4NJH.
--

Andrew had told his parents that he was going to begin saving his pocket money to buy a radio. He won’t have to do that. Among the gifts he received for becoming the 5000th Foundation license holder was a brand new F-T 817 transceiver donated by Yaesu. The Foundation License has only been available to U-K residents since earlier this year. (GB2RS)

EMERGING TECHNOLOGY: HAM RADIO INVITED TO DIGI RADIO EXPERIMENT

Ham radio has been asked to be a part of an important digital radio experiment. Bill Pasternak, WA6ITF, has the details:

--
Digital Radio Mondiale, or DRM, is a project aimed to revitalize the short-wave, medium-wave and long-wave AM radio broadcast bands. This, by using digital signals to provide near-FM quality.

Radio amateurs and serious broadcast-band listeners have been invited to become part of the DRM Software Radio Project. They may also be among the first to access the initial DRM programs when test transmissions begin next month.

James Briggs is the DRM Projects Co-ordinator with Merlin Communications in Dorset England. Biggs says that the project relies on adding an extra down-converter board to existing receivers and then using software to decode the signal via a PC soundcard.

The interface is simple and the sound -- hopefully -- will be superb.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.
--

To find out how you can play a part in the DRM experiment take your web browser to www.drmrx.org (Media Network)

**

RADIO LAW: CONGRESS AND CCR’S

Some good news and some bad news in the drive by the ARRL to get Congress to ban deed restrictions on hams who want to put up towers and antennas. The good news is that several more members of both houses have signed on as co-sponsors in recent weeks. The bad news is that no action took place on the issue before Congress adjourned for elections and there’s little chance of any action once it returns to close out the year. The bottom line: The ARRL says that it will try again when Congress reconvenes in January of 2003. (ARRL)

ENFORCEMENT: FCC PROBES JAMMING OF THE HURRICANE WATCH NET

The FCC is asking a Morrison Colorado ham to explain why he allegedly interfered with an onging hurricane emergency net. The FCC’s Daryl Duckworth, NN0W, tells us about the case:

--
Duckworth: “The Enforcement Bureau opened an inquiry into allegations that Merle W. Garbe, W0SBE, of Morrison Colorado interfered with the Hurricane Watch Net on 14.325 MHz on October 3rd of 2002 during its Hurricane Isadore operation.”
--

The FCC letter to Garbe notes that the Hurricane Watch Net is operated to assist the National Hurricane Center in Miami, other government agencies and people in a target area of a hurricane system. The letter goes on to note that the agency considers this service to be one of the most important purposes of the Amateur Radio Service .

**

ENFORCEMENT: NO RADIO CALL-IN SHOW PERMITTED ON 75 METERS

The FCC is asking a California ham why he allegedly ran a radio call in show on 3.830 MHz and requested shortwave listeners to participate. The regulatory agency alleges that James C. Watkins, KI6GU, of Burbank ran such an operation last August 16th and 24th and used a reverse autoptach system to facilitate the call-ins.

Along with the FCC inquiry Watkins was furnished 9 pages of material relating to the complaints against him. He was given the customary 30 days from the date of the Commission inquiry to respond. (FCC)

**

ENFORCEMENT: BIG FINE AGAINST FLORIDA PIRATE BROADCASTER

The FCC has levied a $10,000 fine against a Florida man who has allegedly been operating a radio transmitter without a license. Richard Munoz of Naples was issued the forfeiture notice for operation of a radio station on 105.1 MHz without Commission authorization. Amateur Radio Newsline's Bill Burnett, KT4SB, is in Miami with the details:

--

The story begins on April 20 if this year. This, when agents from the Tampa Office investigate a complaint alleging that an unlicensed radio station was transmitting on frequency 105.1 MHz in the Naples, Florida area.

A search of Commission records shows that there was no FM radio station licensed on 105.1 MHz in Naples. So, using a mobile direction finding vehicle, the agents trace the station to the Tree of Life Church in Naples.

The agents then interview several witnesses at the church who identify Richard Muñoz as the operator of the radio station transmitting on 105.1 MHz. The witnesses also provide the agents a business card identifying Richard Muñoz as the pastor of a Spanish-language ministry called Mission Possible Ministries. A brochure advertises a radio program called "Mission Possible" on 105.1 MHz.

The agents interview Muñoz. He admits that his ministry owns the radio station equipment and is operating it.

The agents ask Muñoz if he had a license for the station. He replies that a friend has submitted an application to the FCC. Also that the friend has advised him that he could operate the station while the paperwork was being processed.

The agents advise Muñoz that he cannot operate the station without a license and directed him to terminate the unlicensed operation. Muñoz requested additional time to notify his listeners that the station had to go off the air. The agents again tell Muñoz that he could not operate the station without a license and order him to take the station off the air. Muñoz directs another person to turn off the transmitter.

But the story does not end there. On April 30th the FCC'sTampa Office receives

another complaint alleging that an unlicensed FM station is again operating on 105.1 MHz in Naples. Also that it is causing interference to the reception of an FM broadcast station licensed to operate in that area.
On May 14th, agents again trace the station to the Tree of Life Church and on May 17th the Tampa Office issued a warning letter to Andrew dealing, the head pastor of the Tree of Life Church. The warning letter advises DeLong that operation of a radio station without a license violates Section 301 of the Act, ordered him to cease operation of the unlicensed station transmitting on 105.1 MHz immediately.
Then, on May 24, 2002, the Tampa Office receives a letter from Pastor DeLong. In the letter, DeLong states that Richard Muñoz is the operator of the radio station transmitting on 105.1 MHz. Also that that Muñoz leases space for the radio station from the Tree of Life Church, and that the Tree of Life Church had no control over the operations of the radio station.
Based on the facts before it, On June 5th the Tampa Office issues an Notice of Apparant Liability for a $10,000 forfeiture to Richard Muñoz for operating a radio station without a license in willful and repeated violation of Section 301 of the Act. In his response to the notice, Muñoz admits that he operated the unlicensed station on 105.1 MHz, but requests cancellation of the forfeiture. He tells the FCC that his church, Mission Possible Ministries, had agreed to purchase 50% of the radio station for $15,000 from Daniel Morisma approximately eight months earlier. According to the reports, Muñoz maintains that Morisma told him that there was an application for the radio station on file at the FCC and that the station could go on the air while they were waiting for the application to be processed.
According to Muñoz, Morisma told him that the station should go back on the air because the FCC would not visit again, and that if the FCC did visit again, it would issue a second warning before proceeding with any penalties. Muñoz asserts that the station had been using the time between the FCC’s first and second visit to explain to listeners that they would soon be off the air because they had been lied to and scammed and that the station was a week away from dismantling when the FCC visited the station the second time.
But the FCC sees it another way. In its order the FCC says that it is unfortunate that Muñoz may have been duped into believing that there was an application for the radio station on file with the FCC and that he could put the station on the air while the application was being processed.
None-the-less says the FCC, Muñoz clearly knew following the inspection by its agents on April 20th that the station was unlicensed.
The bottom line. The FCC says that under these circumstances, it concludes that no reduction of the forfeiture on this basis is warranted.
From Miami, I'm Bill Burnetrt, KT4SB, reporting for the Amateur Radio Newsline.
--
Muñoz was given the customary 30 days to pay the fine. If he fails to do so the FCC indicates that other punitive action may be taken.

**

WITH THE SCOUTS: JOTA FOLLOW-UP

ARRL Educational Programs Coordinator, Jean Wolfgang, WB3IOS, reports that so far over 125 scouting Jamoboree on the Air or JOTA survey have been received for this years event. The reports show over 9079 Scouts, 2855 visitors, and 657 hams participated. This is a substantial improvement over last year when only 65 surveys were returned!

But says Wolfgang, there are several state we have not heard from. They are Delaware, Hawaii, Idaho, Mississippi, Montana, Nebraska, North Dakota, South Dakota, Utah, Vermont, and Wyoming.

If you participated in JOTA 2002 and have not yet completed the ARRL survey please have a representative of your JOTA event complete and submit the form as soon as possible. You will find it on the web at http://www.arrl.org/FandES/ead/jotalog. (WB3IOS)

HAM RADIO BUSINESS: HAS HAMVENTION 2003 GOT A DEAL FOR YOU

The planners of Hamvention 2003 say -- have they got a deal for you! The Hamvention, in cooperation with the Dayton Montgomery Convention and Visitors Bureau has put together a special V-I-P package. It will do to five of the first 500 who purchase a preregistration ticket before Novermber 15th.

The five lucky winners will be chosen in a randon drawing in early December. They will receive two nights of hotel accommodations during Hamvention, dinner for two at Jay’s Restaurant, a V-I-P badge, a special souvenir package and the most important prize of all. An on-site V-I-P parking pass for the show! Thats right -- parking almost at the Hara Arena front door.

More information on this special Hamvention 2003 promotion is available by e-mail to tickets@hamvention.org. You can also phone during business hours Eastern time to area code 937-276-6930. (Dayton Hamvention)

**

HAM RADIO BUSINESS: WORLDRADIO EDITOR DEPARTS FOR CAREER IN LAW ENFORCEMENT

One ham who may not be at Hamvention 2003 is Worldradio Magazine editor Rick McCusker, WF6O. This is because McCusker has announced that he is leaving the post in a major career change.

Accordong to McCusker, he has been in training for some time to become a peace officer. He has also been working as a Reserve Depuity Sheriff in his spare time. Now, he has accepted a full time position with the Sacramento California County Sheriff’s Department.

Duruing his tenure at Worldradio, McCusker completely redesigned and modernized the magazine’s look. He took most columns by-monthly permitting the addition of new writers representing emerging technologies in the hobby. His legacy is a well respected publication with a steadilly growing reader base.

McCusker's last day at Worldradio will be on Wednesday November 13th. At airtime no replacement editor has been named. (ARNewsline™)

**

THE CHANGING OF THE GUARD: KL7Y LOST IN MOTORCYCLE ACCIDENT

Some sad news. Word that famed contest operator Daniel Robbins, KL7Y, of Wassilia Alaska has died in a motorcycle accident while in Hawaii. According to the Honolulu Star Bulletin, the 54 year old Robbins died Thursday October 31st after he lost control of a motorcycle while riding in Kona and drove into a lava field. The Fire Department said that Robbins, who was not wearing a helmet, suffered head and other injuries.

KL7Y was a friend to many inside and outside of the world of ham radio contest operations. He had just completed operating the CQ World Wide SSB contest from KH7R a few days before the accident that took his life. A memorial guest list for his friends to pay their respects has been set up on line at www.contesting.com. (K7JA, contesting.com)

**

ON THE AIR: THE MIGHTY MO CELEBRATES VETERANS DAY

The "Mighty Mo" is coming to the ham radio airwaves for a very special event. Bob Maguire, KA2WXU, reports over the Internet that on November 9, 10, and 11 the Battleship Missouri Amateur Radio Club will be on the air each day from 17:00 to 04:00 U-T-C on 14.263, 21.363 and 28.363MHZ, in honor of Veteran's Day weekend. There is no special event QSL card for Veteran's Day event but if you Q-S-L via KH6BB you will receive a regular Mighty Mo QSL in return. More information is on the web at www.kh6bb.org. (KA2WXU)

**

ON THE AIR: UARC CELEBRATES 75TH ANNIVERSARY

The Utah amateur Radio Club will celebrate its 75th anniversary with an on-the-air event beginning Saturday November 9th and continuing through November 10th. Operation will be on most high frequency bands with emphasis on 20 meter SSB. The call sign to listen for is W7SP. For a special commemorative card, QSL as directed on the air. (N7HVF)

**

INTERNATIONAL - INDIA: PIRATES PERSIST

The president of the Amateur Radio Society of India, reports a significant number of pirate operations using call signs VU4A, VU7A and similar other call signs continues. VU2SDN says that a blanket ban exists on operations from Andaman, Nicobar and Lakshadweep islands, and that VU4 and VU7-prefix call signs have not being assigned for 10 years. The only exception was the brief

1993 VU2JPS operation from the Andaman Islands. Quoted in the ARRL Letter, VU2SDN says that call signs that begin with VU2 followed by two or three letters or with VU3 followed by three letters are the only valid call signs for India. (ARRL)

**

INTERNATIONAL - USSR: A WALL OF SOUND

Radio Liberty's broadcasts to the Union of Soviet Socialist Republics were the target of Soviet noise jamming for several decades. But Media Network reveals that the Russian operators actually left frequencies undisturbed so their friends could hear the programs. Now, you can too with a 30 second audio sample of what jamming sounded like for those of you too young to remember. Its on the Radio Netherlannds website. The URL is http://www.rnw.nl/realradio/features/html/jamming021018.html (Media Network)

**

DX

In D-X, a surprise U-S to Japan long path opening surprised many South-West region hams the morning of October 31st. At about 15:45 UTC, D44TD was worked as far west as Arizona. while N6XQ was reported to be 599+ into JA-land, Unfortunately for many U-S hams the surprise opening took place while they were away at work and preceeded an X-class flare a bit later in the day. (K7JA)

**

THAT FINAL ITEM: SOLVING AN AGE OLD QUESTION

For nearly a century, mathematicians have been stumped by one of the math world's most difficult problems. This is a conjecture by French scientist Henri Poincare about the properties of three-dimensional space. And now, it appears as id a British math whiz claims to have solved the problem. Amateur Radio Newslines Henry Feinberg, K2SSQ, has the puzzeling story:

--
Jules Henri Poincare was dubbed by E.T. Bell as the "Last Universalist. A man a who was at ease in all branches of mathematics.

Poincare was also a 19th century professor of astronomy who made fundamental contributions regarding the motions of the planets. He went on to found the field of topology, a branch of geometry, and even competed with Albert Einstein in the study of relativity.

Before Poincare, mathematicians fully understood two-dimensional space, such as the Earth's surface, and could list all the possible shapes of two-dimensional surfaces and use mathematical calculations to distinguish between them. But The math mystery Poincare raised regarded the properties of three-dimensional space. His question, or conjecture, was whether the two-dimensional calculations could be easily modified to answer similar questions about three-dimensional spaces.

He was pretty sure the answer was yes but couldn't prove it mathematically. Nearly 100 years later, math whizzes remain stuck, except for one. His name is Martin Dunwoody.

Dunwoody is described as a British mathematics expert. His answer is barely six pages long and only an outline. And as you might expect, Dunwoody's solution - complete with formulas and diagrams - has been praised and challenged in England.

No, we will not try to explain all the math here. What is interesting is the reaction of the scientific community. Professor Ian Stewart of the University of Warwick, one of Britain's most respected mathematicians calls it the first good shot at this problem in years,. But Colin Rourke, another University of Warwick mathematician, disagreed. Rourke says that when he raised a problem in the solution, Dunwoody admitted on his Web site that it could be difficult to overcome.

Once the math community has accepted the solution, the Clay Mathematics Institute in Cambridge, Mass., must conduct its own review. Only if that proves successful will Dunwoody be rewarded. And if the reaction of the British math professors is any indication, this conrriversy could rage on in math circles for years.

Adding it all up for the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.
--

Even if Dunwoody continues to refine his answer and eventually is proven correct, it could be a long time before it's official. First, he must get it published in a mathematics journal, then undergo a two-year waiting period of international review. (Science Today)

Recently I read about a technique used in broadcasting in America where asymmetrical modulation distortion is applied to the radio broadcasts in the medium wave band. This technique allows up to 150% modulation of the audio signal without producing hard non-linear distortion in the demodulation stage of the radio receiver. Therefore it gives a greater audio output for a given RF input. In other words it makes a particular radio station with a given field strength at the receiver antenna sound louder than that for another radio station with exactly the same field strength that uses standard amplitude modulation.

It is said to work by relocating energy from close to the carrier towards the edges of the sidebands. It also has another subjective effect. If one tunes to the station with a radio with a manual tuning control, when approaching the station it sounds louder than if standard AM were used.

Could anyone offer me more information on this devious technique ? When was it invented ? Where was it deployed ? Was it ever used in the UK ?

This technique is common in the US, but not permitted in the UK. The air processor, for example, an Optimod AM, incorporates a phase rotator that will keep the higher amplitude of the positive or negative excursions always positive. This allows you to ensure that maximum negative mod never goes to clipping, and positive mod goes up to 125-150% . It's not all that devious, just exploits the AM potential.

Serge

Who cares?? This isn't EBAY. Leave him negative feedback, and get on
with your life.

EA5WC is not a ham call, anywhere.
Look on the ARRL call sign server and the international servers.
Be thankful that you never sent him the radio first.

Good Luck

Come on Andy, I think hardly qualifys for a post such as yours here on the NG's
  I am glad you posted his behavior on Ebay but be realistic about it your only out of the
posting cost, about what it would cost to buy a cheap steak dinner at Denny's including the
tip.
I have conducted years of business here on the NG and I have NEVER posted anything about a ham
who failed to meet his end of a deal. such matters are for private email or the phone.
 Bad Guy Alerts are for real acts of theft and fraud where a real loss of equipment or money
takes place, then your comments are welcome.
 Please use discretion when you post comments like this it will come back to haunt you!
  Just my two pennies worth

''Behold how good and pleasant it is for Brethren to dwell together in unity''
                    Donnie n4jzh@knology.net

First, what exactly is a "phase rotator" with respect to AM broadcasting? What phases are rotated, and why?

Second, it would seem to me that unequal excursions of the modulation envelope would result in audio distortion, and consequently failure of FCC mandated "proof of performance" certification with respect to audio sine wave distortion?

Unless this is a "pirate radio station" kludge device that cannot meet legal commercial broadcasting standards, what's the entire story? (Other than violating commercial broadcasting standards, it sound like the end function of this device would be the production of loud yet horribly distorted audio. Is there any market for this?)

I guess it's a phase inverter, and a short audio delay which allows the
device to see an asymmetrical peak in advance, and flip the polarity if
required before it gets sent to the peak limiters and transmitted.

> Second, it would seem to me that unequal excursions of the modulation

I guess it only works on waveforms which are asymmetrical to begin with, so
it would have no effect on sine waves and these would not exceed 100%
modulation. What I don't understand is how it could suddenly invert the
phase without making an audible click.

Hi All.

From what I remember of the Optimod AM details the "Phase Scrambler"/"Phase Rotator" was an all-pass-filter that altered the phase of each sin and cos component in the incomming signal, this altered the shape of the wave form (for complex signals, but not sine waves) but not the energy level of each component. I'm not too sure how all-pass-filters behave to be 100% accurate on this.
Optimod also use these in the stereo FM units, when these are switched

in they do alter the sound and make any stereo image that the programme content had even more vauge. If your playing with the phase of the signal in anyway this is inevitable.

Cheers
John

It is a simple method of saving money on the broadcast station's electricity bill. It allows the final amplifier to be run at a higher average efficiency.

In effect, the AM carrier level is increased on loud passages and decreased on soft passages. But it is done at an audio frequency rate.

After all, when there's no music and nobody is speaking you don't really need any carrier at all. There's nothing to carry.

The overall effect is to run the power amplifier at greater than 100%

modulation without a significant increase in distortion.

The result at the receiving end is a little bit extra audio distortion and a little worse signal to noise ratio. Hardly noticeable when swamped by the distortion always present in the receiver's loud speaker.

Probably been used for the last 60 years by low-fidelity broadcasters who are always trying to increase their service areas at lower cost. The advertisers' are in there somewhere.

British AM broadcasters do it. Some do it more than others. Tune over the medium wave band and ask why some very strong stations (AGC fully operative) appear to be louder than others.

Careful Reg. Asymetrical modulation wont effect the AGC on your radio only AMC which is what the BBC use.

Asymetrical modulation is were the peaks of the modulating audio is made more positive with respect to the normal symetrical audio AC signal, but the negative peaks must remain the same.

In the USA they run to 125% modulation as a attempt increase loudness of a station and even possibly improve the potental coverage of a transmitter, it can be said that a increase in power has occured by running to 125% mod but the transmitter is still running the same power a specified by the licence.
In the UK the rules don't allow anything beyond 100 % mod.

In theory there is no limit on how positive the modulating audio can be made other than the maximum modulation level the transmitter can achieve, but the negative peaks must remain within 100 % or over modulation will occur.
Asymetry of the audio is done within the Optimod processor, while at the receiver everything is made normal, except the programme sounds louder with a minor increase in distortion.

AMC = Amplitude Modulation Companding and is a method of reducing the output power of the transmitter has it reaches 100 % mod. Thus causing your radio's AGC to compensate. The BBC run 3dB AMC which means that a 150 kw transmitter with no modulation the output will be 150 kw while at 100 % mod the peak mean power will be 112.5 kw instead of 225 kw. The idea is save the BBC money on the electricity bill, BBC Radio 5 runs this.

AMC can sometimes be called DCC which the BBC World Service run, very similar.

I have one new 3COM 3c509B combo NIC card 10 mbs ISA new in the package shrink wrap still on the box. Lifetime warranty.. Retail this card is about $160.

$90 shipped free CONUS

I also have some 3c509B-X pulls. $45 each also free shipping.

Hi,
It could be special edition made with pure gold.

I doubt it.  All versions - B's, C's, etc. - go for $5.00 here in Southern CA.

You can get $5 for them?
Maybe I shouldn't have tossed mine in the trash (along with the Intel
Ether Express 16 cards and NE1000 cards etc.)

Ain't it the truth! Last weekend I bought 2 brand new 10/100 PCI NICs with
Wake-On-LAN (with the WOL cable!) at Fry's for $1.99 each! No rebate
needed, though there was a limit of 2.  Now THERE'S something worth $5!

10Base-T cards? I thought there was a disposal fee required for each one
like your old tires.

In Southern California, it hasn't come to that yet. There's still plenty of older, ISA-bus based computers in operation.... However, I admit that the $5.00 price is a bit old - as of the last time I bought any. They may have fallen to $1.00 each by now, but aren't completely worthless. Most NE2000 and other cards are worthless, but for some reason, the 3COM's are preferred.

Dr. OM's

Is there anybody out there who are able to mail me a manual for a Yaesu
FT-840 ?
If so, i will be VERY happy :-) I need to figure out how to use the
connections on the backside for JOTA the coming weekend.
The format (PDF ect.) is not important.

Please respond to oz1bv(at)oz1bv.dk - replace (at) with @

I bought a linear power supply, the MFJ-4035MV, but the fan noise is just plain loud. Although it runs cool as a cucumber, the fan is three times as loud as the transceiver.

Does anyone have the Astron RS-35A power supply, or other in the 40-35 amp range? Is the fan loud?

Any suggestions for a conventional power supply in the 30-40 amp region where the fan noise won't offend the wife?

John

I have 3 Astrons. No fans in them at all. I would suggest moving the power supply under the bench, or to another location, if possible.

Hi Brian
I have a manual, but no way to scan it.
What info do you need about the rear connectors ?

Hi Brian
I have a manual, but no way to scan it.
What info do you need about the rear connectors ?

I have the Astron VS-35M. No fan at all. I find the variable voltage
and current limiting features useful from time to time. I definitely
recommend getting the RS-35M (same as the RS-35A, but with voltage and
current meters). The meters are well worth the few extra dollars.

Amateur Radio Newsline™ Report 1313 – October 11, 2002

Amateur Radio Newsline report number 1313 with a release date of Friday, October 11th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

A first ever Amateur Radio satellite for New Zealand and hams are honored in the U-S mid-West These stories are first on Amateur Radio Newsline report number 1313 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: ZL ANNOUNCES PLANS FOR KIWISAT

Ham radio in space is coming to New Zealand. This, with announcement of a new ham radio satellite to be designed and built down-under. Amateur Radio Newsline's Jim Meachen, ZL2BHF, has a close-up look at Kiwi Sat.

--

Yes, that's actually its name. Kiwi Sat. And in case you were not aware, the Kiwi is a bird with thick hair-like feathers, no tail, a beak one third the length of its body, and nostrils at the tip. It looks like a cross between a hedgehog and an anteater. And its found only one place in the world. Here in New Zealand. Its our mascot and we love it. And now the hams of Kiwi-land are naming our soon to be built ham satellite after it.

Like the bird that its named after, Kiwi Sat will be a bit unusual in its own right. It will be a rather small ham-sat. A 237 millimeter cube based on the early 1990's Microsat technology developed by AMSAT. But it will carry some 21st century electronics that will enable it to run both as linear translator for low duty cycle modes like sideband and C-W as well as an F-M transponder to serve the needs of the overall ham radio community. This, even though the solar cells can only produce a maximum of 15 watts of available power at any given moment and an average of only 6 watts. Uplinks will be on 70 and 23 centimeters with Kiwi Sat talking back to Earth on 2 meters.

But there's more. Plans also call for Kiwi Sat to carry some sort of scientific experiment and possibly even a digitalker module. This would permit the satellite to identify with its own voice as well as provide some good publicity for the Kiwi Sat project. All of this made possible by the many advances in microchip design that have taken place since the first Microsat was launched.

There is one big difference between a feathered Kiwi and the ham radio satellite the hams down here are building that I should mention. A live Kiwi cant fly. Kiwi Sat will.

From Auckland, New Zealand -- down-under -- I'm Jim Meachen, ZL2BHF, reporting for the Amateur Radio Newsline.

--

As we go to air, no completion or launch date has been announced for Kiwi Sat. An excellent article on the project appears in the summer edition of the AMSAT Journal. (AMSAT)

**

HAM RADIO IN SPACE: PC SAT IN ECLIPSE

Meantime users of the P C Sat ham satellite are being requested to please turn off all unattended night time transmissions. This, to conserve energy while the bird is not in direct sunlight and having its batteries charged.

According to Bob Bruninga, WB4APR, P C Sat left full sunlight on Sunday

September 30th. The bird is still fully operational but is passing through 25 minute eclipses on every orbit. And because of these eclipses the overall power available on board P C Sat is down. Keeping unattended beacons off while you are not there cuts the load on the satellite power supply significantly.

Bruninga says that with everyone's cooperation the satellite might be able to make it to full sun again in November. He adds that normal operations are O-K when the satellite is in sunshine and the batteries are on charge. (AMSAT)

**

RADIO LAW:: FOLLOW-UP - S.A. ACTS TO PROTECT THE 70 CM BAND

A follow-up to last weeks story on the probable threat to the 70 centimeter band posed by a planned Earth Exploration Satellite Service that's soon to be launched. As reported last week a discussion paper will be brought before the World Radio Conference next year that directly targets 432 to 438 MHz for exclusive use by the Earth Exploration birds.

The threat is very real and now comes word that at least one national ham radio society is taking action to stop the incursion. The South African Radio Relay League which was the first to make information on the threat public is already engaged in urgent talks with the that nations telecommunications regulatory body. Their objective is to try and convince the radio law makers that such a reallocation of spectrum would be a severe blow to the future of amateur radio. Others national societies are expected to quickly do the same. (SARL, Q-News)

**

RESCUE RADIO: HAMS HONORED FOR TORNADO WORK

Ham radio Radio Skywarn spotters from 14 Central and Southern Indiana counties are being given credit for helping save lives. This, during an unusual outbreak of tornadoes the morning of Friday, September 20 th. Amateur News Weekly's Jack Parker, W8ISH, tracked the storm and has this report.

--

When an F3 Tornado started it's destructive journey across Indiana, Hoosier hams were hot on the trail. In fact, the storm moved so quick several amateur radio operators almost became casualties themselves.

The mid-morning outbreak started as a line of strong thunderstorms associated with a cold front. Tornado touchdowns were reported in several counties southwest of Indianapolis before noon. The storm gained strength as it ripped apart homes and businesses while tossing cars like they were matchbox toys. Many amateur radio operators saw first hand the destructive power of these late summer storms. Around 1:00 p.m., an F3 tornado touched down in Ellettsville, just west of Bloomington, Indiana. Two Ellettsville hams, Mike Poe, KB9SGN, and Russ Ryle, N9DHX, had close encounters with the super strong tornado. According to one Monroe County Spotter "The tornado went right past Mike's house. Poe was in his driveway trying to get away in his truck and wound up dodging parts of his neighbors house while transmitting a warning to the Bloomington repeater. At the same time Russ Ryle was taking cover.

--
Ryle: “I was just passing information for my local area. First report I had was, we had a tornado on the ground. I could see some debris. At that point my wife and I took cover in the bathroom”.
--

As many as four tornadoes skipped across Indiana covering 112 miles. Over 20,000 homes were damaged. Thankfully, no one was seriously injured or killed. The National Weather Service office in Indianapolis credited the Skywarn spotters with saving hundreds of lives. As the NWS began to receive frequent damage reports, activation of spotter groups became critical. The NWS requested spotter information be relayed to their office as quickly as possible so counties in the path of the storm could be alerted.

According to National Weather Service Warning Officer, Dave Tucek, quick actions by spotters helped the NWS increase watch and warning lead times to 25 minutes or more, saving lives.

After the storm passed, many of the individual county spotters groups teamed up with their local Red Cross, Salvation Army and Emergency Management agencies to provide communications between shelters and county EOC’s. Some of the amateur radio operators found themselves working with damage assessment teams while providing communications for National Guard clean up crews. Reporting from Indianapolis, for Amateur News Weekly, this is Jack Parker, W8ISH
--

Following an aerial survey of the damaged areas, Indiana’s Governor Frank O’Bannon said this is the most wide spread tornado damage to hit the state in over a decade. Damage assessments are expected to be in the millions. (ANW)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the K7UGE repeater serving Las Vegas Nevada.

**

RESCUE RADIO: FCC OK’S NEW PERSONAL LOCATOR BEACONS

If you are a ham involved in search and rescue work, listen up. The FCC has issued a report and order that provides for licensing individual 406.025 MHz personal locator beacons or P-L-B’s. The agency says that it will require mandatory registration of these devices with the National Atmospheric and Oceanographic administration.

According to the CGC Communicator, a 406 MHz digital P-L-B signal contains information on the type of emergency, the country an identification code of the beacon in distress and other information to facilitate search and rescue operations. Even more important, a 406 MHz distress signal can be received and stored on-orbit by the COSPAS/SARSAT satellite and later retransmitted to the ground. That should eliminate the so-called blind spots found in older 121.50 MHz and 243.00 MHz devices. (CGC Communicator)

**

ENFORCEMENT: YOU GET YOUR OLD CALL BACK

The FCC has written to Jamie H. King, Jr. of New Bern, North Carolina to tell him that it has canceled the Vanity Call Sign W4JHK and has reinstated his previous KG4RLJ call. Amateur Radio Newslines Bruce Tennant, K6PZW has more:

--

Back on June 19th the agency requested that Jamie H. King, Jr., provide documentation of his claim that he was a former holder of the W4JHK call sign. He responded by letters dated July 20th and 27th. In his reply King stated that he believed that the problem seemed to lie in interpretation of blanks to be filled in on the Vanity Call Sign application. He says that when he completed the application last February, he interpreted the line 'Former Primary Station Holder' to mean any primary station license, regardless of call sign, issued at a date earlier than the application. Therefore he says that he was referring to his previous license KG4RLJ when he checked that line.

But the FCC says that explanation might be acceptable if King had only checked the "Former Primary Call Sign Holder" block. But the FCC says that King also wrote in the call sign W4JHK. Also, that the application block contains the statement -- quote -- "This call sign was previously shown on my primary station license."

The FCC says that in view of the fact that King has never been a former holder W4JHK, that his call sign reverts to KG4RLJ. It says a license bearing that call is on its way to him.

Reporting for the Amateur Radio Newsline, I’m Bruce Tennat, K6PZW
--

The FCC adds that it is not pursuing further enforcement action at this time but cautioned King to use care in the filing of any future applications with the FCC. (FCC)

ENFORCEMENT: BIG FINE FOR SELLING ILLEGAL CORDLESS PHONES

The FCC has issued a $7,000 against Lightning Electronics Incorporated of Miami Florida. This, for willful and repeated violations of the Commission's rules involving Lightning's marketing of unapproved long-range cordless telephones. Phones that the agency says are capable of interfering with aviation safety. Phones that hams say are ripping up the two meter band. We have this report:

--

Back in February of 2001, the Federal Aviation Administration told the FCC that some pilots were reporting receiving sporadic interference to an aviation frequency here in the Miami, Florida, area. In March of 2001, the FCC's Miami Office identified the source of the interference as a long-range cordless telephone being operated from an electronics store in Miami. That one was quickly removed from the airwaves.

As a result of the FAA's concerns, the FCC launched a nationwide investigation into the unlawful marketing and use of long-range cordless telephones. During the inquiry, the Bureau discovered that electronics dealers were selling long-range cordless telephones in several states. It also found that certain of the long-range cordless telephones caused interference by transmitting spurious emissions on aviation frequencies. Even more scary -- others were specifically designed to operate in the aviation band.

During the investigation, agents from the Miami Office visited Lightning Electronics retail store. This took place on July 27, 2001. While there, agents saw several of the illegal long-range cordless telephones on display. Models included a Super Phone CT-9000, a Prolink CT-6000CID, and an Optima OP8810.

According to the FCC, a salesperson at Lightning offered to sell one of the units to the agents. As a result, on August 24, 2001, the Miami Office issued a citation to Lightning for violation of rules which prohibit the marketing of unapproved radio frequency devices.

But the company apparently did not heed the warning. On September 26, 2001, agents from the Miami Office and from the Tampa Office again visited Lightning's retail store. At that time they purchased a Prolink BAO-6110CID long-range cordless telephone and antenna for $669.80. The telephone the agents purchased was capable of causing serious interference to aviation communications and was not approved for sale by the Commission.

On October 29, 2001, the Tampa Office issued a Notice of Apparent Liability to Monetary Forfeiture against Lightning but the company did not file a response. On February 21, 2002, the Bureau issued a Forfeiture Order. On March 8, 2002, Lightning filed a petition for reconsideration of that order indicating certain information did not pertain to the company. The FCC responded with a new order last May 21st and has now ordered Lightning to pay up.

From Miami, I'm Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.

--

So far the FCC investigation into the sale of these illegal high power cordless telephones has resulted in the issuance of several citations and fines by the agency's Enforcement Bureau. Its also gotten a few that bothered ham radio communications on two meters off the air. (FCC)

ENFORCEMENT: SBC TO PAY $3.6 MILLION IN CONSENT DECREE

SBC Communications will pay $3.6 million to federal regulators for filing inaccurate information in applications to provide long-distance service in four states. The consent decree resulted from Federal Communications Commission investigations of S-B-C applications to enter the long-distance markets in Missouri, Texas, Oklahoma and Kansas.

In agreeing to the consent decree the company admits no wrong doing. In fact, SBC says that the inaccuracies were the result of good-faith efforts in describing highly technical matters and not the product of any intent to mislead. (Published reports)

NAMES IN THE NEWS: MITNICK SELLING LAPTOPS TO PAY LEGAL FEE

Former computer hacker Kevin Mitnick, N6NHG, says that he is selling some of his personal items to pay a lawyer who is trying to save his ham radio license. Mitnicks' request to renew his license earlier this year end up in it being designated for a hearing. The items that Mitnick is auctioning off include his old Toshiba laptop computer which was taken by the government back in February of 1995. As this is written, that computer is up on e Bay with a top bid approaching $10,000.

A second laptop is also up for auction. It features a layer of fingerprint dust and red "X" marks where fingerprints were lifted. It also includes a mouse still housed in an FBI evidence bag. Both computers are signed on the bottom by Mitnick and former Apple executive Steve Wozniak. (Published reports)

**

NAMES IN THE NEWS: RAFY BRIEM N6FFT - TALKRADIO LEGEND -- RETIRES

Talk radio legend Ray Briem, N6FFT, has retired. Briem's last show was on Sunday evening September 28th over Los Angeles radio station KRLA. Before moving to the 870 spot on the AM dial Briem spent several decades honing the art of late night talk over at KABC radio on 790 Kilohertz. While there his show was eventually put on the ABC radio network, nationwide. (ASWLC)

**

NAMES IN THE NEWS: A.PROSE WALKER, W4BW - S.K.

A. Prose Walker, W4BW, the man considered as the father of the "WARC bands" has died. Walker headed up the FCC's old Amateur and Citizens Division from 1971 to 1975. While there, he made the initial proposal for the creation of the 10, 18 and 24 MHz bands at a conference in Geneva 1972. Later, Walker organized and chaired the United States the Advisory Committee of Amateur Radio. This committee took the initial steps to turn the idea into reality at the 1979 World Administrative Radio Conference.

But there was another side of Walker that hams in the world above 50 MHz do not remember very fondly. It was a set of highly restrictive repeater regulations promoted by Walker back in the early 70's. Among other things, these rules required the submission of what are today called engineering feasibility studies in order to get a required W-R prefix repeater license. The regulations were so strict that repeater growth almost ground to a halt for the better part of half a decade. Eventually, the ham community lead by 73 Magazine publisher Wayne Green, W2NSD, rebelled against the Walker inspired rules. They were repealed as a part of repeater deregulation a few years later.

Walker was living in Rochester, New York, at the time of his death. He was 92. (ARRL, Repeater Remailer, W9JUV, 73 archives, others)

ON THE WEB: INTERNET OUTAGE ON UUNET

If you think that the Internet went away for a few hours on October 3rd, you are close. What actually happened is that some users faced heavy delays reaching Web sites and accessing e-mail for a few hours because of widespread technical troubles on WorldCom's long-haul network.

A WorldCom' backbone called U-U-NET carries most of the Internet traffic in the United States. The problems began about 8 a.m. and about 20 percent of WorldCom's U.S. Internet. Very few if any lost service and Worldcom had service fully restored by early afternoon. WorldCom says that the problem appears to have been with the lists telling router computers how to pass data on to their destinations. (Published reports)

INTERNATIONAL - GERMANY: THE CODE SHOULD STAY

Germany's Deutscher Amateur Radio Club is that country's national Amateur Radio society. As previously reported, the D.A.R.C. supports the retention of Morse code testing as a license qualification. Now, D.A.R.C. has put this position on the discussion agenda of the International Amateur Radio Union's Region 1 Conference. Its slated to be held in San Marino in November. (Q-News)

**

INTERNATIONAL-UK: BBC AND B SKY B TO LAUNCH ALL DIGITAL TV NETWORK

The British Broadcasting Company and Rupert Murdoch's B sky B network are

teaming up to create a new all digital television service in the United Kingdom. According to news reports, the terrestrial service called Freeview will be launched on October 30th. It’s purpose is to fill the void left by the collapse of I-T-V Digital Television. If successful, it will give Great Britain a let up on the rest of the world by being the first nation with an all digital network.

**

INTERNATIONAL - NEW ZEALAND: HAM RADIO WALKABOUT

Well known land hiker Tony Whitiker, G3RKL, will be walking in the north island of New Zealand during the month of October. Tony will be walking from east to west and will be on the air using the callsign ZL6WFE. He will be on the New Zealand national repeater network and hopes to send Slow-Scan Television pictures live via the Internet Radio Linking Project gateways. (Q-News)

**

ON THE AIR: NEW PROPAGATION BEACON FROM FN20

On the air, Steven Kerns, N3FTI, in Reading, Pennsylvania reports over the VHF Reflector that he has established a new 2 meter propagation beacon from grid square FN20. Its on 144.279 Mhz running 4 watts out into a Discone antenna but he plans to change that to a halo in the coming weeks. Steve is also planning a 6 meter beacon to operate from the same location. QSN reports go to Steve at his callbook address. (VHF Reflector)

**

DX

In D-X, VE7XF is going back to the Cook Islands next weak in a muilti-multi operation to take part in the C-Q World Wide DX SSB Contest. He and the gang will operate from Manihiki on North Cook Island as ZK1MA during the event. Before and after the contest they will spend as much time as possible on 6 meter C-W and S-S-B with the call ZK1AKX. Listen for the operation from Manihiki from October 18th to the 31st and then on to Rarotonga South Cook Island from November 1st to the 11th. QSL cards go to Ralph Parker, 5330 Wallace Ave., Delta, British Columbia Canada at postal code V4M 1A1 (GB2RS)

K5AND, W5OZI and W5LXG will be operating from Montserrat from October 31st through November 8th. The trio will be focusing most of their attention on the 6 meter band using a Yaesu FT-897, a 7 element yaggi and radiating about 800 watts out and a Morse beacon on 50.155 Mhz.. From 20 to 10 meters they will run about 100 watts out. They say that the location is ideal for making 6 meter contacts across Europe, Africa and maybe even into the United States. As we go to air the most likely call sign they will use is VP2MJD. If you work them, Q-S-L as directed on the air. (VHF Reflector)

And Nick Peckett, G4KUX, operating as YA4F, has made what he claims is another first-ever contact on 6 meters from Afghanistan. Nick is now claiming that at 11:08 UTC on the 27th of September he worked VK6JQ in Broom, Western Australia for a YA to VK first on the Magic band. (G4NJH)

And G4IUF is on vacation in the Galapagos Islands. He hopesto be active on C-W and SSB from San Cristobal Island through the 23rd of October. He has requested the callsign HC8UF. (RSGB)

**

THAT FINAL ITEM: FIRST 'eDX100' AWARD TO 4Z4DX

And finally this week, word that the first ever 'eDX100' award, issued on the basis of electronic - or 'e QSLs' - was awarded on the 25th of September to Dov Gavish, 4Z4DX of Ramat Hasharon Israel. The ‘eDX100’ award is billed by its sponsors as an electronic equivalent to the ARRL's DXCC but is issued for receiving electronic QSL’s from a minimum of 100 DXCC entities through the eQSL.cc system.

eQSL.cc or the Electronic QSL Card Centre which sponsors the award is operated by Dave Morris, N5UP, of Garland, Texas. It is supported by an advisory board of volunteers around the world.

And true to the nature of electronic QSL’ing, 4Z4DX will be able to print an ‘eDX100’ certificate on his own printer. He will also receive a full-color certificate and a walnut plaque in the mail. (eQSL.cc)

I have just bought the techniks "press n peel"kit for making PCB'S my
question concerns the directions ,the first step, where you photocopy the
circuit image onto the dull side of the emulsion. Not being used to
photocopiers,which way faces up as it is loaded into photocopier the shiny
side or the dull side,I've only got a few sheets and don't want to waste
them,.

Mark.

I know the problem from trying to do double-sided copying. Simple
solution - take a sheet of plain paper and write "this side up" on the
side that is up (logical, but I figured I should say so). Then shove
that through the copier, and the result will solve your dilemma.

This works well. Remember that different models will vary, so check on
the one you are actually using. For a printer or copier you use
frequently, you might want to put a label on the paper tray when you
figure it out.

Also useful for double sided copies, letterhead, label stock, special stock, and so on.

Happy trails,
Gary (net.yogi.bear)

This is channel is about radios.
That doesn't mean everyone talking about and playing with their knobs
and tweaking their dials, it means anything from antennas to radio =
broadcast content.
If you think there is a whole newsgroup dedicated to your knob, then you =
wish.

Sometimes, there is a logo of a sheet of paper that tells you.

Most paper trays manufactured in the past decade have an icon indicating print side. If it prints on the side facing down, it shows a corner folded with squiggly lines of print showing on the folded portion.

Although if they actually were visible, this wouldn't be a problem.
They are often a raised molding in the plastic, in exactly the same
color.

Fax machines have similar labeling, and I have seen faxes of the back
side (blank) of something more than once.

Happy trails,

Why not mark a sheet of photocopy paper with a message like "this
side" copy a document and see if your scribble gets overwritten ;-)
either way you will know what way to fit your 'Press and peel" stuff

Best way is to take a piece of paper. Make a mark on it. put face down in the paper tray. make a copy and see if the mark is up or down in the output tray. then you know which way to put your sheet.

Are there any handheld or mobile HAM radios that can also listen to
trunked 900mhz freq? Or is it a scanner for the trunked systems, and a
separate transeiver for the HAM side?

Amateur Radio Newsline™ Report 1314 – October 18, 2002

Amateur Radio Newsline report number 1314 with a release date of Friday, October 18th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The FCC tells ham radio its not going to have to share 2300 Mhz. This story is first on Amateur Radio Newsline report number 1314 coming your way right now.

(Billboard Cart Here)

**

SPECTRUM ISSUES: FCC SAYS NO TO 2300 MHZ SHARING

First the bad news. The FCC has dismissed an ARRL petition that sought primary status for amateurs in the 2300 to 2305 MHz. Now the good news. The Commission has also turned down a paior of petitions from commercial interests that had hoped to share the spectrum with Amateur Radio. Amateur Radio Newsline's David Black, KB4KCH has more:

--

It's not just ARRL that the FCC turns down. The Commission also dismissed petitions from MicroTrax and AeroAstro--both groups had sought access to 2300 to 2305 MHz. The FCC says it's denying the two commercial applications in part because appropriate spectrum is already available elsewhere. And, according to the Commission, neither company had demonstrated a need for additional spectrum.

By way of background, an ARRL bulletin says that MicroTrax had wanted to establish a Personal Location and Monitoring Service between 2300 and 2305 MHz. The petition by AeroAstro asked to share the band on a co-primary basis with Amateur Radio. AeroAstro wanted to launch its Satellite Enabled Notification System messaging service.

But the Commission says AeroAstro's request did not go far enough in protecting other serevices. The agency was particularly concerned that NASA's Deep Space Network would not be protected by the modified out-of-band limits AeroAstro had proposed.

The FCC says that -- at least for now -- amateur weak-signal communications in the 2300 to 2305 MHz band will be protected if the amateur allocation remains as secondary. The Commission says band will remain in its spectrum reserve. The status quo will be maintained, then, until the FCC re-evaluates the status of the frequencies in relation to the Amateur Service at some point in the future.

For the Amateur Radio Newsline, I'm David Black, KB4KCH.

--

The 2300 to 2305 MHz band is allocated to Fixed and Mobile services on a primary basis and to the Amateur Service on a secondary basis in all three International Telecommunication Union regions. The Radiolocation Service has a secondary allocation in the band in Region 1, and a primary allocation in Regions 2 and 3. (ARRL)

**

RESTRUCTURING: NETHERLANDS MAY SAY GOODBYE TO MORSE TESTS

Im Bill Pasternak, WA6ITF, with some late breaking news. It comes from the Netherlands where the Morse code could soon be going away. RSGB News reader Jeramy Boot, G4NJG, has the details:

--

The Netherlands is set to abandon the Morse code test next year. Rob van den Ent, PE9PE, reports that the Netherlands' national amateur radio convention took place the 12th and 13th of October. He says that the Dutch radio regulatory authority used the occasion to announce that if, as expected, Morse code is lifted as a mandatory requirement for an HF licence at nextyear's World Radio Conference, the authority would immediately eliminate the Morse code test in the Netherlands. At the same time, current VHF licensees would get direct access to the HF bands without further examinations.

--

More on this story in future Amateur Radio Newsline reports. (GB2RS)

**

RADIO REGULATIONS: BIG CHANGE AT THE ITU RADIOCOMUNICATION BUREAU

Ham radio has lost an significant post in the area of setting world radio policy. This, as a non radio amateur is selected to head up an important aspect of the International Telecommunications Union. From Brisbane Australia, Q-News Graham Kemp, VK4BB, has the details:

--

Valery Timofeev has been elected director of the International Telecommunication Union -- ITU -- Radiocommunication Bureau. Timofeev, who is Russia's deputy minister for communications and informatization, has extensive experience in radio frequency spectrum management at both the national and international levels.

Timofeev's election does mean for the first time in at least three decades, an non-Amateur Radio licensee will head the ITU Radiocommunication Bureau. The election took place during the 6th ITU Plenipotentiary Conference now under way in Marrakesh, Morocco. The meeting concludes October 18th.

From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

The political signifigance of this change is obvious. Having a ham radio operator in this position gave the service considerable leverage in negociations involving spectrum issues. (Q-News)

**

RADIO REGULATIONS: HAM RADIO GAINS OBSERVER STATUS AT THE IARU

The International Amateur Radio Union now has observer status at ITU meetings. IARU President Larry Price, W4RA, was on hand to represent the organization at at a major ITU gathering which was held in Marrakesh Morroco in late September. And Region 2 Executive Committee member Tim Ellam, VE6SH, is now participating on behalf of the organization. (Q-News)

**

THE WAR ON TERROR: COMMUNICATIONS STANDARDS ADOPTED

Back here in the United States, the communication industry has adopted emergency procedures intended to help maintain the nation's telephone, cable and Internet networks in case of a natural disaster or terrorist attack. The procedures were developed by a council of more than 50 industry officials formed by the Federal Communications Commission in January.

The group adopting the standards is called the Network Reliability and Interoperability Council. Their job was to recommend ways to strengthen communications networks to resist attack. The plan all have now agreed to will help companies in a crisis contact and work with partner firms to keep services running. (NRIC)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the AA4ED repeater serving Broward Ounty Florida.

(5 sec pause here)

**

ON THE AIR: IRLP NODES TO GET AN EXTRA DIDGIT

Changes are in the air for those of you involved in internet radio linking. This, to permit an increase the number of possible I-R-L-P nodes to over 99 000.

Right now most I-R-L-P users will not notice any difference. Eventually IRLP node codes will increase from three numbers to four. The result is that node 640, for example, will become 6400. (G6PHF/Bass IRLP Group via APC News)

**

ENFORCEMENT: FOUR LICENSES CANCELLED IN EXAM INVESTIGATION

Turning to enforcement news, a group radio amateurs who did not show up for a retest are no longer membewrs of the ham fraternity. The FCC’s Daryl Duckworth, NN0W, explains:

--
Duckworth: “As a result of an audit by the Enforcement Bureau of the September 1st 2001 examination session given in Yucaipa California by the W5YI VEC, the Wireless Telecommunications Bureau has cancelled the licenses of four who did not appear for a retest. Those are Technician Camito E. Lopez KG6GJG and General class licensees Marcileno Llanes KG6HBR, Manual Vega KG6GSP and Marcial Rivas KG6HCP.
--

Duckworth says that the investigation into the exam session continues. (FCC, RAIN)

**

ENFORCEMENT: KENYAN PIRATES OFF THE AIR

Still in the enforcement arena, ham radio in Nairobi Kenya have gotten some relief from illegal operators. Kenyan Intruder Watch Coordinator Ted Alleyne reports that five High Frequency stations have been confiscated. Also, the operators of a Nairobi travel agency that was using 2 meter amateur frequencies were caught and equipment has been siezed. (Q-News)

**

ENFORCEMENT: IRANIAN JAMMER UPDATE

The 40 meter Iranian jammers we recently reported on are still being heard. Intruder Watch Regional Coordinator Martin Potter says that the jamming is being done to a low power station called Radio Mujahed. It’s being head in 10 Kilohertz steps from 7 point 010 to 7 point 090 Mhz. Potter says that S-W-L’s may find the same situation in the broadcasting frequencies as well. (Q-News)

**

NAMES IN THE NEWS: FCC CHAIRMAN POWELL COMMENTS ON MEDIA OWNERSHIP

Some names in the news. First is FCC chairman Michael Powell. He has warned that rules on media ownership will probably be struck down by the courts if they aren't modified to account for sweeping changes in the media landscape over the past 30 years. Powell's comments came shortly after the FCC released the results of studies suggesting that many ownership rules are outdated. The studies mark the foundation of the FCC's review of key rules on media ownership. (ComOnline)

NAMES IN THE NEWS: CULTURAL RESOURCE SPECIALIST NAMED

The C-G-C Communicator reports that Dr. Amos J. Loveday, Jr. has been appointed as the "Cultural Resource Specialist" in the F-C-C's Wireless Telecommunications Bureau's Commercial Wireless Division. His job will be to insure that tower and antenna siting projects comply with the requirements of the National Historic Preservation Act of 1966. He will also assist the FCC in establishing a closer working relationship with Native American Tribes and Native Hawaiian Organizations. (CGC Communicator)

**

NAMES IN THE NEWS: KB5HAV APPOINTED ASST MGR OF HURRICANE WATCH NET

Bobby Graves, KB5HAV, of Pearl, Mississippi, has been named as the Assistant Manager of the Hurricane Watch Net. According to the ARRL Letter, Graves appointment was announced by Mike Pilgrim, K5MP, who is Manager of the net. More information is on the web at www.hwn.org (ARRL)

RESCUE RADIO: AOL SIGNS ONTO AMBER ALERET SYSTEM

The worlds largest Internet service, America Online, says that it will soon begin transmitting Amber Alerts. The service says that the alerts about abducted children will show up on the screens of computers, pagers and cell phones of more than 26 million of its subscribers in dozens of states and cities beginning in early November. Warnings issued by most communities that use the system will go to AOL users in those areas who request to receive them. All but one of the existing Amber Alert systems are participating in the America Online project. (AoL)

**

EMERGING TECHNOLOGY: X-RAY EYES

If you thought only cartoon super-heros like Superman could see through walls to detect the villains, guess again. New technology called ultra-wideband will soon allow mere mortals to detect objects buried underground and to build cars enhanced with sensors that help avoid collisions.

According to press reports, ultra-wideband uses millions of narrow pulses each second to get an accurate reading of location and distance, opening the door for new applications in radar tracking, precise positioning and wireless communications. The possibilities vary from short-range computer networking for homes to devices that determine the location of golfers on a course.

What regulators like even better is that ultra-wideband devices can work within frequencies already allocated for other radio services -- helping to maximize this dwindling resource. The Federal Communications Commission believes the technology is so promising that the agency has proposed allowing it to be used on an unlicensed basis.

But it may be a while before the new technology is available. First, government agencies and private groups are testing to make sure ultra-wideband can safely coexist with other services, like the Global Positioning System. More information is on the Ultra-wideband working group website at www.uwb.org (Science Today)

HAM RADIO IN SPACE: PCSAT - HELP NEEDED TO BUILD A NEW BIRD

Bob Bruninga, WB4APR, of the P-C-sat Project Team has put out a call for an antenna designer for the next generation of this type of ham satellite. According to Bruninga, to get a free ride to orbit for P-C-Sat the satellite must fit inside of a perfectly spherical but totally passive mirror surfaced 18 inch diameter ball. Also, the antenna must be totally internal with no external protrusions.

To make it happen, the P-C-Sat team at the US Naval Academy Satellite Lab, needs a good RF designer and antenna modeler to help out. If you can help, please contat Bob Bruninga by e-mail to wb4apr@amsat.org. P-C-Sat is scheduled for launch in less than a year. (AMSAT BB)

**

RADIO IN SPACE: GOVERNMENT CONTRACTS FOR NREW WESATS

The government has selexcted TRW Space and Electronics to build the fleet of next generation weather satellites. The Redondo Beach California unit of Cleveland Ohio based company will build two satellites with options for up to four more.

Eventually six new polar-orbiting satellites will collect data on the Earth's weather and climate, as well as its land, oceans and atmosphere. The birds will go into orbit between 2009 and 2018. The contract to build the new weather satellites is worth up to $4.5 billion dollars. And that’s billion – with a B. (Published reports)

**

INTERNATIONAL – AUSTRALIA: THE CB MOUNTAIN CHALLENGE

Turning to the international pages, C-B operators in Australia are about to embark on what is best described as a cross between an emergency training operation and a contest. Its called the Mountain Challenge where the object is to accurately pass a message around the state of Victoria using C-B radio.

It will all take place on Saturday the 30th of November. Both 27 MHz and U-H-F C-B radio is used to get the message through. And this year the event will extend beyond Victoria, with C-B'ers in Mount Gambier and Tasmania having expressed interest in taking part.

Find this interesting? Want to learn more? Well you can – on the web at www.mrc.cat.net.au. (Q-News)

**

INTERNATIONAL - AFGHANASTAN: KANDAHAR GETS TV

A new television station in Kandahar Afghanastan is being called a resounding success. This even though the signal is so poor the Afghan musicians shown in the first broadcast looked like grainy, quivering ghosts. According to Abdul Ali who heads up broadcasting in Kandahar, all of the equipment is than 20 years old and had not been used at all during the years that the Taliban ruled the country. (Media Network)

**

INTERNATIONAL - CANADA: VE3CT WLECTED QCWA PRESIDENT

For the first time in the history of the Quarter Century Wireless Association a Canadian radio amateur has been elected as its president. Croft Taylor VE3CT , who previously served as vice president, assumed office on September 1st and will serve a two year term. The QCWA was founded in 1947. You can learn more at www.qcwa.org (RAC)

**

DX

In D-X, A group of five American operators will be active using ZK1 callsigns from Manihiki in the remote North Cook Island group through the 31st of October. They will be active on 6 to 160 metres on CW, SSB and RTTY. During the CQ World Wide SSB Contest on the 26th and 27th of October they will use the callsign of ZK1MA. (GB2RS)

9V1SM is Sasi, a new operator from Singapore. He is active on all bands from 40 to 6 metres, mainly on SSB. He also plans to start PSK-31 operation in a few week's time. (RSGB)

Lastly, the new address for the ARRL W 5 Incoming QSL Bureau is O.K.D.X.A, PO Box 2591, Claremore, Oklahoma 74017-2591. If you have cards for W-5 land, send them there. (ARRL)

**

THAT FINAL ITEM:

WITH THE SCOUTS: JOTA THIS WEEKEND

This weekend, the 19th and 20th of October, is the scouts Jamboree on the Air, or JOTA. Bruce Tennant, K6PZW, tells us what its all about:

--
The Jamboree on the Air is an annual event. Every October a half a million Scouts and Scout Guides all over the world take to the airwaves to make contact with each other by means of Amateur Radio.

The World Scout Bureau owns and operates its own Amateur Radio station. The the call sign H-B-9-S and it operates from a permanent radio room located in its offices in Geneva Switzerland. The station normally operates during Scout Nets and other major scouting events like the Jamboree On The Air. This year, the station is active on 160 through 10 meters in a number of languages.

Here in the United States, the big JOTA gathering takes place at Camp Wisdom near Dallas, Texas. The call sign to listen for from there is K2BSA slash 5. Other stations expected to take part include GB2GP in London England and JA1YSS from Tokyo Japan.

If you are hearing this newscast before or during this years Jamboree on the Air, get on the air and show your support of the worlds youth and of scouting by making contact with a J-O-T-A station. Who knows, it could evenb be HB9S.

For the Amateur Radio Newsline, I'm Bruce Tennent, K6PZW, in Los Angeles.
--

Again, this weekend, the 19th and 20th of October, is the 2002 Scouting Jamboree on the Air. And if you are hearing this newscast later in the week we hope you had time to contact a Jamboree station. (ARNewsline™, Q-News, GB2RS)

Following trunked transmissions is only something I have seen in a
specialized scanner.

While some newer ham radios have scanning capabilities, they don't
seem to have as many features or as much speed as a stand-alone
scanner.

Happy trails,
Gary (net.yogi.bear)

I've used "press n peel" quit a few times over the last year, the last time being about half an hour ago. In general I've found it to be effective and fairly simple, but limited to a fairly high track size. I've used it mostly for making audio amplifier PCBs which I use large/huge tracks on anyway so that limitation doesn't bother me. The smallest track I'd probably use would be about 20mil, but I usually use at least 40mil.

The most difficult part is the actual ironing onto the PCB. If it doesn't go to well there may be small breaks in a track, half a pad missing here and there, or if the plastic shifts slightly when you're first starting some tracks may end up with a smeared appearance, and end up wider than desired. Many of these defects can be corrected before you etch by using a permanent pen to cover over/replace any missing mask, or by scratching off any excess with a knife/scriber. Most boards I make will need about 1 minute with a pen to check and fix any small defects, but I rarely have to scratch anything off.

Before I first used the "press n peel" I came across a web site of tips on it (I no langer have the address). The two tips that I've found to be most helpful are:

1) Don't actually feed a whole sheet of the stuff into the printer. First print on plane paper exactly what you want to print onto the "P n P" noteing which way up the paper was in the tray it came from, and the direction the paper was fed through the printer. I usually use the straight feed paper tray that folds down on the front of the printer, not one the actual paper tray draws, and I draw an arrow somewhere on the paper to show the feed direction before it is printed on. You then cut a piece of the press n peel large enough to cover the image on the paper with maybe 1 cm overhang on all edges. With some sticky tape, tape down the leading edge (as it will feed through the printer) of the "P n P" directly over the image on the paper. Then put the paper back in the tray in the same orientation as before and reprint. You should end up with the paper being drawn into the printer,

taking the small cutout piece of "P n P" smoothly in with it, in exactly the right spot for the image to be printed on it. Then take the "P n P" off the paper and iron it onto your clean blank PCB. By doing this you use far less of the "P n P" than if you used a whole sheet every time (unless you're making A4 sized PCBs). I'd generally get between 4 and 6 PCBs per sheet, so of the original 5 sheets I've got 2 left after making about 15 PCBs.

I've never had problems with the sticky tape going through the printer, but I can't make any promises about your tape going through your printer. (I wouldn't realy expect any difference, this is just a simple word of caution about the quality of tape you feed through your printer)

2) When you iron the "P n P" onto the PCB the corners will tend to curl up a bit, which will result in the tracks nearest the corners barely sticking down and not leaving the toner behind. So when laying out your PCB put a nice big fat (300mil) border around your layout to help stick the "P n P" in place when you iron it on and keep it nice and flat near the tracks you want to keep.

I would assume that not everyone would be happy with the quality of the results from "Press n Peel" but I'll continue to use it happily (until I finish the last 2 sheets then I might try something new so I have something to compare it to) as I was very quickly able to make PCBs adequate to my purposes with minimal initial cost outlay.

I hope this is of help.

Cheers

Dennis

KPEN in Atherton, CA (near San Francisco) was on the air with Stereo FM in 1961 as I recall. I had a Scott FM tuner then. Model 310.

For FM Stereo start date -- See URL:
http://www.tvhandbook.com/support/pdf_files/audio/Chapter14_6.pdf

"The second spark that made FM come alive was stereo. Although stereo audio dates back to experiments performed over wire lines by telephone engineers in the 1880s, real development came only with post-World War II technology. In 1959, the National Stereophonic Radio Committee was created to examine the many proposed systems of transmitting FM stereo and submit a final recommendation to the FCC. In the summer of 1960, 6 systems were field tested over KDKA-FM in Pittsburgh, with receivers set up at Uniontown, PA. The system proposed by General Electric and Zenith was adopted, with broadcasting authorized to start on June 1, 1961.
The first stations to begin stereophonic programing under the new rules were, quite appropriately, WGHM, Schenectady, NY (owned by General Electric), and WEFM, Chicago (owned by Zenith).

Circular polarization of the transmitted signal was another major step for FM radio. One of the early proponents was KPEN-FM, Atherton (on the San

Francisco Peninsula), which later would become KIOI (better known as K-101), San Francisco. KPEN received a special temporary authorization from the FCC in the later part of 1963 to start testing the effects of adding a vertical component to the existing horizontal signal."

Dennis

Many thanks for your detailed reply. I have to say that it sounds as if I'd
be better off sticking to my current method of printing positives onto
overhead-transparency material in my laser printer and using pre-sensitised
PCB material. I do both analog (RF) and digital, usually on the same PCB,
with track widths going down to 12mils.

Steve

That sounds like the best option to me. With the lower track widths and
track spacing you'd be much more likely to get track breaks and bridges.
You might be able to use it successfully, but I'd guess that it would be
unreliable, and if you've already got a method that works I'd stick with it.

Cheers

Dennis

Sorry Bubba, but I guess I don't fit your little tirade either. I'm active in my church and Local Union. I not only enjoy chatting on the radio, but also the opportunity to meet people over the airwaves that I would not normally get to meat. A contact in the Philippians, Japan, Puerto Rico among others. I have gained many new friends all up and down the area I live in and enjoy the Ham Club I belong to. Old and young, male and female members attend. Some over weight, yes but a lot aren't. I'm not, I walk at least 13 miles a day and bicycle about 50 miles a week. So if you really don't like Ham radio and the people who participate then go hang out with you computer game geek friends or go back to watching cartoons.

Wouldn't you think a "real ham" would have better things to do than
whine about "vanity callsigns"? I would. Get a life, Jimmy.

i hate to use that term but it fits the bill...I bought a kenwoon tm-d700 from

VE7EPS KERRY ATKINSON of Edmonton, ablerta... I sent the payment
by western union.. no radio i call i emailed he said it was shipped , then
he said he would trace the package... not the email does not work and his
phone is disconnected..... I know now of others that have been burned by this
person.
I have asked for a refund but no answer to that eather.....
DO NOT DEAL WITH THIS PERSON ....
I hope this message saves somebody else from being took by this guy
If anybody has any info on this person please email it to me....
thank-you   73's Foster   w1cgt@amsat.org

I've used it with mediocre results. As others have said, it's good for big stuff, but forget anything surface mount. (I prefer surface mount, as then you don't need to drill all those holes... <G>)

Honestly, I really prefer to use the presensitized PCB method. You don't need a darkroom to do it; I work on the bathroom counter with the bathroom lights off and the hall lights on. I've done surface mount as fine as 0.5mm (20 mil) pitch; that takes some care and strict attention to timing. (Haven't had to do anything finer.)

The only extra steps involved are exposing the board and developing the exposure. Everything else is the same.

900 MHz 8 Cavity Duplexer
Compact Duplexer with Circulator

This Duplexer came from an older 900 MHz linking radio system. It is presently tuned for 895.90 MHz TX and 934.70 RX, making it very suitable for the 900 MHz Ham band. It came out of service, so should be working fine, but it comes AS-IS.

I have a question.. my local first aid and fire companies use pagers
to notify them of calls. The pagers can be set so that the volunteers
hear nothing until there's a call (page).  Does anyone know if they
transmit CTCSS tones to activate the pagers? The reason I am asking it
because I'd like to set my VX-5R to use the "Bell Operation", so that
when the CTCSS tone for my squad is set off, my radio beeps. How would
I find out what CTCSS tone is used, if this is indeed the method of
activating the pagers.

More likely to be DTMF tones that actuate the pagers.  Lots of reasonably
priced 2m HTs that have DTMF decode, so I'm sure your VX-5R can do this.
Very likely the radio also has a CTCSS tone, but that would be for comm use,
hard to say if the pagers have CTCSS decode also.

Mark

Find out the frequency and start listening. The vx-5 can scan for CTCSS
tones (kinda slowly, but it's there). And just listening to the proper
freq without the tones enabled should tell you if they use DTMF, but I
suppose you'd have to catch the very beginning of a transmission.

Hope this helped.
Ben

Even more likely than DTMF is two tone sequential signalling (like QC-II)

Hi,

This may be a stupid question: how do I get a new call sign assigned? I moved from TN to WA and want a xx7xx callsign issued. All I can find on the FCC site is how to apply for a vanity callsign, which is not what I want to do...

Thanks.

Jan

The cheapest way to do what you wnat is to buy an old Minitor 1 pager (EBAY) and put the correct crystal and and tone reeds in. I would guess it'll cost you $30-$50.

Thanks for all the replies. I think it's obvious I will not be able to
set the VX-5 to beep when the tones are activated. I'll have to be
happy with listening to everything on the frequency.

Hi,

Are you a licenced ham radio or SWL ?

and are you interested in amateur astronomy too, or professional ? I
mean you have some background in that matter, you own a telescope >
100 mm aperture, or you know well astrophotography, or the sky, etc.

I would like simply keep a list of some amateurs, licensed but also
SWL, working in both hobbies, like me, a way to exchange some
information one or another day.

A short summary of your activity 'd be welcome (not mandatory)
Give me also your callsign (I presume you are listed on QRZ.com) or
the URL of your website.

Thanks in advance.

Amateur Radio Newsline™ #1315 – October 25 2002

Amateur Radio Newsline™ report number 1315 with a release date of Friday, October 25 to follow in 5-4-3-2-1.

The following is a Q-S-T. A ham radio operator may have played a part in the apprehension of the DC sniper suspects, the U-K says no more new operators in its 5 megs experiment and the ARRL says no to unlicensed visitors sharing a United States ham radio band. These stories are first on Amateur Radio Newsline report number 1315 coming your way right now.

**

RESCUE RADIO: HAM RADIO HELPS NAB THE DC SNIPER SUSPECTS

A ham radio operators may have played a role in the apprehension of two men wanted in connection with the sniper shootings in the Washington DC area. ABC News interviewed the trucker who called the police to report he had spotted the two suspects. When asked how he heard about the description of the vehicle, his response was that he heard it while listening to Bozo on WLW radio

Now, Chip Margelli, K7JA tell amateur Radio Newsline that Bozo in real life is Dale Sommers; callsign WB6OM. Sommers hosts a very popular late night trucker's show on the 700 Kilohertz clear channel station. His show is mainly music and information of interest to long-haul truck drivers. The description of the wanted men was just that. As a result the pair are in custody thanks to a trucker who was paying attention to what WB6OM had to say as “Truckin Bozo” over WLW in Cincinnati. (K7JA)

**

INTERNATIONAL: NEW PERMITS FOR THE UK 5 MHZ EXPERIMENT GOING ON HOLD

What happens when a propagation experiment gets a bit to popular? If you are a telecommunications regulator in the United Kingdom you might be inclined to temporarily suspended issuing further permits for hams to take part. And that’s what’s about to happen in regard to the United Kingdom’s 5 Megs experiment. From Nottingham England, here’s Jeramy Boot, G4NJH:

--

The Radiocommunications Agency says that applications for 5-MHz band experimental Notices of Variation or NoV’s have far exceeded their expectations. The R.A. now considers that the risk of congestion on the five spot frequencies allocated may be detrimental to the overall success of the experiment.

Accordingly, the RA has decided not to issue any further NoV’s for applications received after the 31st of October. The position will be kept under review and occupancy monitoring of the frequencies will be carried out. It is hoped that ollowing this exercise - more NoV’s could be issued, or a numerical limit to the number of NoVs can be set based on usage and congestion. It is likely that an announcement can be made later this year for action early in the new year.

Jeramy Boot, G4NJH.

--

The United Kingdom 5 MHz experimental band was made available to that nations individual Full Class A hams by means of a Notice of Variation issued last July. The five 3kHz-wide frequency allocations are permitted for the purposes of antenna and propagation experiments. The Radio Society of Great Britain is in charge of the overall management of the project. (RSGB)

**

INTERNATIONAL: AN IARU UPDATE FROM PRESIDENT LARRY PRICE W4RA

Still in the international arena, we have a follow up to last weeks story on the International Amateur Radio Union. With it, here’s our producer Bill Pasternak, WA6ITF:

--

We received a very nice note from International Amateur Radio Union President Larry Price, W4RA, following last weeks story about the recent meeting in Morocco. According to President Price, the news isn't the IARU observer status at Plenipotentiary Conferences. He tells Newsline that IARU has had this status since the 1998 Conference in Minneapolis. At that time the International Telecommunications Union Convention rules were modified to give the same privileges at Plenipotentiary Conferences as IARU already had at Radio Conferences.

President Price says that the real news was the special station, CN8UIT set up at the conference center in Marrakech. He says that this was a follow on from a similar station set up by the ARRL in Minneapolis and one eight years ago in Kyoto, Japan from the JARL.

Buy the way, the CN8UIT call is based on the French pronunciation of the International Telecommunications Union. For those of you unaware, the

International Amateur Radio Union was founded in 1925 specifically to represent our service at international conferences. It has done so -- with great success -- ever since.

With a thank-you to IARU President Larry Price, W4RA, for that neat note, I’m Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.
--

In his note to us President Price says that the IARU has taken part in every major conference in modern years. Also that it will be there for all of us at WRC 2003 in Geneva Switzerland. (ARNewsline™)

**

INTERNATIONAL: ARRL ASKS FCC TO DENY US USE OF EUROPEAN/UK FRS-TYPE RADIOS ON 70 cm

The ARRL is saying no to visitors using unlicensed radios in our ham bands. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has more:

--
The ARRL has asked the FCC to deny a petition that would set aside spectrum in the 70-cm ham band for non ham use. This, for use by visitors from Europe and the United Kingdom to use their Personal Mobile Radio transceivers while in the U-S.

According to the ARRL Letter, the request was filed by Dr. Michael Trahos, KB4PGC of Alexandria Virginia. It asks that European PMR 446 type handie-talkies be allowed to operate license free while overseas travelers were in United States jurisdiction. PMR 446 hand-helds are similar to the US Family Radio Service transceivers but operate on eight channels between 446.0 and 446 .1 MHz. at up to a half watt out.

In his Petition, Trahos said that existing Part 97 Amateur Service rules precluding the use of PMR 446 radios in the US were essentially unenforceable and that granting his petition would have minimal impact on existing amateur operations. The ARRL countered by saying that there are obvious enforcement problems associated with the Petition. It says that putting the unlicensed users on a ham band is a formula for serious interference problems to be created.

For the Amateur Radio Newsline, Im Bruce Tennant, K6PZW, in Los Angeles.
--

As an alternative, the ARRL recommends that European and UK visitors simply purchase inexpensive FRS transceivers to use during visits to the United States. (ARRL)

RADIO LAW: FCC REJECTS AMATEUR'S PETITION FOR RECONSIDERATION ON CC&R ISSUE

The FCC has turned down a Petition for Reconsideration filed by a Florida amateur. This, of the Commission's 2001 decision to deny the ARRL's Application for Review in RM-8763. That proceeding concerned the League's effort to have the Commission include privately imposed deed restrictions under PRB-1.

The ARRL says that the FCC dismissed its Application for Review last December 18th. At that time the FCC noted that PRB-1 more than adequately protects federal interest in promoting amateur communications from overly restrictive regulations.

Not long after, W. Lee McVey, W6EM, of Bradenton, Florida, filed his own Petition for Reconsideration Mc Vey claimed that it presented additional evidence that the FCC had not considered in dealing with the ARRL's petition. But the FCC disagreed. It says that McVey offered up no new evidence in the matter and has turned his petition away. (ARRL)

**

ENFORCEMENT: INDONESIA PIRATE UPDATE

An update now to our recent story on the problems being caused by pirate stations in Indonesia. Not only are they making life difficult for hams around the world. The pirates are also playing havoc with domestic Indonesian ham radio communications as well. With more, heres Q-News Graham Kemp, VK4BB:

--

Many reports covering Indonesian non amateurs using our frequencies in the 40, 20 and 10 metre bands are making their way to the IARUMS. There seems absolutely no control over their working and existence by the local Government.

It is very difficult for licensed Indonesian amateurs to find a clear frequency in the lower edges of 40mb for their authorised cmmunications. Generally the licensed Indonesians are around 7050,7055 and 7060 kHz for their traffic. 7050 kHz frequency, carries CW lessons for the intending future amateurs. Otherwise, the licensed ones, operate in their own nets and you can clearly identify their call signs in between, as per standard practice, though the entire conversations are in Indonesian.

Another frequency regularly used by a SE Asian group for two-way non amateur communications is 14044 J3Eu mode around 0100 UTC every day. IARUMS need the services of those knowing SE Asian languages to identify them, they may be from

XV, 3W or XU area.
--

If you are a resident of South-East Asia and heating this newscast, you are requested to watch 14.044 MHz and help identify the unlicensed users. Please send that information to your nations Intruder Watch Coordinator as fast as you can. (Q-News)

**

ENFORCEMENT: PIRATE BOARDCASTING IN SAN DIEGO CA

Back here in the U-S-A, Bob Gonsett's CGC Communicator reports on an entity calling itself Free Radio San Diego which announced plans to begin broadcasting on on 96.9 MHz.. The transmitter location and parameters are unknown but one person reports being in the town of Carlsbad California and seeing a spray-painted stenciled sign on the concrete walkway promoting Free Radio 96.9. Also, the operator of the station does have a web site at www.pirate969.org What action the FCC may be planning on this one is unknown. (CGC Communicator)

**

ENFORCEMENT: BE CAREFUL ON 146.52

The has FCC issued and then retracted advisory notices to five Mid-West hams telling them that they were talking to long. This, on the national calling frequency of 146.52 MHz.

The letters said -- and we quote: "The frequency 146.52 MHz is customarily used, and is called for under the band plan, as a simplex calling frequency for Two Meter operation. Numerous communications from your station during the above dates have lasted from nearly half an hour to an hour. While band plans are not mandatory under the Commission's rules, the Commission depends upon them to minimize the situations in which Commission intervention is required, and they comport with good Amateur practice under our rules. Please review Section 97.101 of the Commission's rules" -- end quote.

The FCC origionally said that the October 16th letters went out following a review of complaints about the operation of their Amateur stations between September 19th and October 6th. The retraction was issued on Wednesday October 23rd. No reason was given for the withdrawal. (FCC)

**

ENFORCEMENT: FCC JUDGE FAVORS SCHOENBOHM'S RETURN TO AMATEUR RADIO

The ARRL reports that an FCC Administrative Law Judge believes the regulatory agency should permit Herbert L. Sahoenbohm to once again hold an Amateur service license. In rendering his decision, Judge Arthur I. Steinberg says that he believes Schoenbohm now appears to hold the requisite character qualifications to be a Commission licensee.

The FCC had designated Schoenbohm's license renewal application for a public hearing. This based on character issues stemming from a 1992 conviction and alleged lack of candor during subsequent FCC hearings on the matter. The former KV4FZ lost his bid to renew his ham ticket in 2000. He applied for a new license in 2001 which lead to the recent recommendation by Judge Steinberg. A final decision on whether or not to re-license Schoenbohm now must be made by the FCC itself. Schoenbohm has also passed an Extra class exam that is also pending. (ARRL, FCC)

**

THE INTERNET: DENIAL OF SERVICE ATTACK THWARTED

What investigators are calling a sophisticated and large-scale assault against the World Wide Web has been thwarted . But not before nine of the thirteen servers that manage global Internet traffic were crippled for a short time on Monday October 21st.

The FBI's National Infrastructure Protection Center said that it was aware of the denial of service attack and is addressing this matter. Service was quickly restored after managers put defensive measure in place bringing the attack to a halt. Most Internet users did not even notice the hour long attack whose origin is still not known. ON THE WEB: TECH NOTES GOES HIGH TECH

You have hears us credit it here on Amateur Radio Newsline. Now, Larry Bloomfield's broadcast industry publication Tech-Notes is available on the World Wide Web in a new easy-to-read format. Larry has adopted HTML scripting which permits him to publish pictures, logos and diagrams. And you will always have lots about digital and high definition television and much more. You can check it out on-line at www.Tech-Notes.TV. (Tech-Notes, CGC)

**

NAMES IN THE NEWS: PAUL BLUMHARDT, K5RT, JOINS CQ STAFF

Paul Blumhardt, K5RT, has joined the staff of CQ Communications, Inc. as Director of New Business Development. Blumhardt, of Rowlett, Texas, will oversee efforts to broaden the base and the scope of the company's marketing activities.

According to publisher Dick Ross, K2MGA, Blumhardt has actually been part of the CQ "family" for the past three years, serving in a volunteer capacity as Worked All Zones Award Manager. Blunhardt holds an Extra Class amateur license, a commercial FCC General Radio Operator License and degrees in both engineering and business. Among his personal operating achievements are 5-Band Worked All Zones, 5-Band DXCC, 6-Band Worked All States, and #1 DXCC Honor Roll.

As all of you are aware, CQ Communicatoins publishes magazines, books, videos and other materials for the amateur radio and hobby radio fields. They are also a co-corporate underwriter of the annual Young Ham of he Year Award. (CQ)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

(5 sec pause)

**

THE WAR ON TERROR: A BANNER AND A LINK

Pieter Wycoff, KG4UPX, says over the Internet that he has found an important tool that every concerned ham should have on his or her personal website. Wycoff says that the Homeland Security Knowledge Database has a banner that can be posted to any website notifying visitors of the current status of alert to terrorist threats.

The site also contains lots of other information relevant to homeland security and how you can play a part. You can even sign up to receive threat notification updates by e-mail. To learn more on how you can add this feature to your ham radio website, take your web browser to http://www.twotigersonline.com/resources.html.

And for those not aware, right now the nation is under color code Yellow which indicates an elevated level of alert. (Via Internet)

CONVENTIONS/HAMFESTS/CONFERENCES: AMSAT IN FT. WORTH IN NOVEMBER

The 20th annual AMSAT Symposium will be held November 8th to the 10th in Fort Worth, TX. The gathering actually kicks off with an Early Arrival Activity on November 7th and ends with the conclusion of the Board of Director's Meeting on the 11th. More information is in cyberspace www.amsat.org. (ANS)

**

SATELLITE NEWS: FCC DECLINES TO APPROVE ECHOSTAR-DIRECTV MERGER

The FCC has declined to approve the transfer of licenses from EchoStar Communications Corporation and the Hughes Electronics Corp. subsidiary DirecTV to form a new business entity. The FCC said that the companies did not demonstrated that approval of the transaction will serve the public interest,convenience, and necessity. The complete story is on the web at www.fcc.gov/Daily_Releases/Daily_Business/2002/db1010/DOC-227263A1.doc (CGC)

**

HAM RADIO IN SPACE: SOYUZ ACCIDENT SOLVED

A Russian state commission has set October 30th as the launch date for a Soyuz rocket carrying a three-person crew to the International Space Station. The decision was made after investigators determined that it was a probably a production glitch rather than faulty design which led to the October 15th crash of a similar launch vehicle.

For a while, it appeared that ham radio operations and everything else on the International Space Station might come to a grinding halt. Russia had threatened to suspend resupply launces following the mishap with the unmanned Soyuz ship which exploded seconds after liftoff, killing one person on the ground and injuring 20 others.

Such a delay would have had a devastating effect of future habitation of the space station. This is because the current emergency evacuation lifeboat vehicle is fast approaching the date on which it must be replaced. Only a Soyuz launcher can carry the replacement lifeboat to the ISS. If the Soyuz launchers had been kept on the ground, operations on the ISS might have been suspended. Thankfully, that wont be the case. (Published news reports)

**

INTERNATIONAL - RUSSIA: HELP LETTER MAY BE PHONY

A electronic letter purportedly from a Russian ham asking for financial assistance may be a phony. Then again, maybe not.

The letter showed up in hams mail boxes and on the numerous Internet news groups beginning on October 18th. Signed by a person calling himself Valentin, the note asks for donations of money and other gear. What has made many suspicious is that the writer never gives his call sign and does not use any ham radio terminology.

A number of people believe that the letter was actually sent by a spam-mail generating company or someone with a program that harvests e-mail addresses from the World Wide Web and generates automatic e-mail to them. There is even some speculation that the message did not come from Russia as the note itself claims.

Then comes a posting to the QCWA remailer from Lee Manning AK7T. Manning says that he e-mailed the writer of the message. Valentin replied that his callsign is RA3XAA. According to international call sign listings, RA3XAA belongs to Valentin Mikhaylin in Kaluga Russia. We have e-mailed him and are waiting to find out if he is the person who issued the letter and how he was able to get so many e-mail addresses of United States hams.

Meantime you might want to keep in mind two words. Caviat Emptor. Buyer -- or in this case -- giver beware. (QCWA Remailer, others)

**

INTERNATIONAL - THE NETHERLANDS: AUCTIONS NOT MANDATORY

Media Network says that a judge in Rotterdam has ruled that the next Dutch government will not be required to auction the commercial radio frequencies to the highest bidders. The ruling on Friday October 11th will impact on future spectrum auctions in that nation. (Media Network)

**

DX

In DX, GB2EVR is a new permanent special event operation for the Eden Valley Railway in the U-K. The station is located at the Warcop railway station, six miles east of Appleby-in-Westmorland, Cumbria. (GB2RS)

Also, JA2ZL will be active as F0/JA2ZL from Morea Island in French Polynesia from the 30th of October to 2nd of November. He plans to operate on 40 to 10 meters mainly SSB, with some CW and RTTY. (GB2RS)

And a milliwatt Beacon is on the air on 11 meters from Northern California. AOH is at the top of a very high mountain and operates under FCC rules part 15. This is the same as child walkie-talkie and can be heard on 27.125 MHz. The Beacon is on the air trying to make a point you don't need 20 kilowatts to DX. If you hear it, QSL to aoh@ computermail.net (APC News)

**

THAT FINAL ITEM: INNOVATION IN AMATEUR RADIO REWARDED

And finally this week, a big honor for a deserving ham. Amateur Radio Newsline’s Don Wilbanks, KC5MFA, has the details:

--

Brad Phillips ZS5BP has been rewarded for his innovation in Amateur Radio. This by being named to receive the South African Radio Amateur of the Year Award.

Phillips received the honor for his work in introducing the Internet Repeater Linking Project - or IRLP to that nation. South Africa Radio League President Sid Tyler congratulated Phillips on his achievements saying that IRLP is as much part of amateur radio as is HF.

But that’s not all. The award itself says that IRLP offers new opportunities for the development of the amateur radio service in South Africa. This is because it brings amateur radio within the reach of young people in schools and the older generation who, after retirement, often do not have access to High Frequency stations or other ham gear of their own. Phillips work brings ham radio to both.

For the Amateur Radio Newsline, I’m Don Wilbanks, KC5MFA.

--

The South African Radio Amateur of the Year Award is sponsored by Siemens. Its given annually by the South African Amateur Radio Development Trust to a ham radio operator who has made a major contribution to the Amateur service. (SARL)

Can someone scan the article in May 1950 QST on aluminum anodizing and
coloring, please? Several of us are trying to touch up some old radios.
Thanks. Jim

why save as wav when you can save them as MIDI ?????
a nice program call morse2midi is just what you need

Morse Midi 1.1

Copyright (C) 1999 Alex Shovkoplyas, ex UR5EMI

Overview

Morse Midi generates Morse messages from text and saves them in a MIDI file.
Calibrated transmission speed, MIDI playback, automatic text generation option.

MOTOROLA JEDI HT1000/MT2000/MTS2000 CLONING CABLE
Original Motorola product, mates to accessory ports on JEDI HT1000,
MT2000, MTS2000 portables, allows cloning radio personalities from one
radio to another. Like new but has one bent pin on one
connector...works, but you have to be careful when you mate the pins
and secure the connector. $30 shipped anywhere CONUS. Respond and
attach this message to dt0124@comcast.net

Some of this is inevitable.

In industry, noisy things are often placed in a service chase or well vented closet, to keep heat and noise away from the work area. Perhaps you can find a way to remote your PS to a basement, and run some conduit and large enough wiring to your shack. For wires inside the walls, check with your local electrical code, as you are talking big amperage.

Is is the air/fan noise, or is it vibration of the unit on the floor?
Try putting some closed cell foam under the little feet.

Happy trails,

I need the following listening frequencies for my Bearcat III scanner...

155.415
153.980
157.450
155.340

155.055
  39.500
162.400
159.210
453.250

If you have more than one of the above, please let me know as I might also restore another Bearcat III and a Bearcat IV. I would like to trade or buy cheaply. I have the following 10.8 IF Bearcat crystals (listening frequencies) for trade...

  33.940
  33.940
  39.780
  39.820
  45.220
  46.380
154.250
154.860
155.010
155.085
155.100
155.250
155.250
155.595
159.090
159.890
162.475
453.500

Thanks,
BTJustice

I have old QST Magazines from early 70's, 60's, and possiblely earlier.

Also have a few Amatuer Radio Handbooks (1968, etc)

The Radio Amateurs Journal from early 70's, 60's, and possiblely earlier.

Have a Antenna Relay Unit BC-442 AM manu by Colonial Radio Corp for the Army (Not sure of working cond.)

IC Active Filter-QF1 - Manu Autek Research (Not sure of working cond.)

Philmore Junior Microphone in Box (Not sure of working cond.)

Also have a bunch of vacuum tubes and electron tubes, pretty sure they do not work (look blown)

Location: North of Boston, MA

Email me,

Can email pictures if you want to see the stuff

I have been DESPERATELY looking for 10.8 IF crystals for my Bearcat III
scanner. I need the following listening frequencies...

155.415
153.980
157.450
155.340
155.055
 39.500
162.400
159.210
453.250

I suppose 10.7 IF crystals would work in it if I used...

155.315
153.880
157.350
155.240
154.955
 39.600
162.300
159.110
453.150

I would either like to trade 1 for 1 with crystals I have now that I cannot use in my area or buy cheaply.

Sincerely,
BTJustice

Press "transmit" hold it on .
Press "*"
Un-key transmit (ie let go of it)

Have the following items for sale or trade:

Kenwood TS-680S HF + 6 Meter Rig - All modes, all bands, full coverage
$475.00

MFJ 1278T (Turbo w/2400 Baud modem) VHF, HF all mode, Packet, Amtor, Rtty, Cw, Fax and more w/cables no power supply (uses 12v DC).
$75.00

Icom HM-14 Touch tone hand mike w/no connector (works on any rig w/8v supply, Kenwood, Icom, Yaesu ect.)
$50.00

Kenwood SP-120 matching speaker for 120/130/140/430/440/450/680 etc rigs
$50.00

Radio Shack HXT-202 2 meter handheld w/no so great Icom BP-8 battery (radio used very little, excellent cond)
$80.00

BC-350 Icom quick desktop charger for BP and Super BP series batteries
$40.00

IC-U12 Commercial UHF handheld in non-working cond. had touch tone pad etc. (no idea what it does & don't want to waste time finding out)
$15.00

Diamond HomeFree 802.11 wireless cards - One PCMCIA and Two ISA cards, perfect cond. upgraded to Cisco aironet and don't need these.
$25.00 for ALL three cards!

IBM type 4707 (10"??) VGA monochrome monitor in excellent cond. Great for tight spaces and communications use (cw, rtty, packet etc.) VGA modes upto 640x480
$50.00

RF Concepts VHF Amplifier model 2-315, rated at 20 in, 150 out and 40 in 170+ watts out, great amp. GasFet preamplifier in excellent cond., used very little and bought new.
$250.00

Considering trades on some items for the following:

Icom IC-706 MK II G
Alinco DX70TH
or something on that line...

Also looking for a 10 meter mobile like a Magnum 257, RS HTX-10, or one of those clones like those rigs

Shipping for 78258 extra...

Thanks for all the suggestions. My shack is in a small room, on a small desk so there is no room to relocate the power supply.

The noise was both the fan itself, and the air movement. I made an executive decision to return the power supply and pay the restocking fee; the noise bothered me that much. In my view, a power supply - like a spouse - is for life. Both should be strong, reliable and quiet. My wife is; my power supply isn't.

Actually, I wimped out. I had a 7/5 amp Astron power supply that I used to power a 50 watt 2m mobile rig indoors. I hooked it up to my new Kenwood TS-570DG and it let me run 15 watts on both CW and PSK. I've been having a ball with QRP. The first weekend I worked 15 states and 24 countries on 80-10m with a 80m dipole fed with ladder line. No one will accuse me of dominating the frequency, but no one will accuse me of not having fun, either.

I may get an Astron eventually, but for now 5-15 watts does the job.

Could use some help from some of our more technically minded antenna buffs.

Several years back, I came up with a general use dipole for SWL's that I named the "Tri-Di-Pole". The "Tri" meant a third wire element connected to the ground side of the dipole at the appex, with this wire running straight done to be connected to a ground rod. This was invented more for practicality purposes, so SWL's didn't have to fiddle with ground wires soldered to those tiny little external antenna phone plugs that are in common use for most portable shortwave radios.

But over the years, several hams have called me about using this same antenna for transmitting. To be honest, I've never tried it for transmit. I just don't have the real estate to experiment with it. But now I'm curious, how well would it work for transmitting purposes?

My devices are born more out of a practical design than technical. I freely admit I'm not all that antenna theory book smart. My questions: What kind of a pattern would this antenna have? Would the take off angle make it highly suitable for DX on certain freq bands? And what would I have to trim? Just the two standard dipole elements? Or would I also have to trim the third ground element? Anybody ever try such a design for transmit and on what freqs?

Thanks for any/all input.

Ham Radio operators tend to be fat, in a greater percentage than the general population. One just has to attend a random Hamfest and this would confirm this.

I saw a survey on eham.com on fat Hams and I could not believe it.

Are you a FAT HAM? Calculate your BMI! (Body Mass Index) Divide your weight in Kilograms by your height in metres squared. eg. BMI 100/(1.8 x 1.8) = 30.86

The results will make you think...

18.5 - 24.9 - Normal   33% (284)
25.0 - 29.9 - Overweight   25% (217)
30.0 - 39.9 - Obese   11% (92)
40 or Greater Extremely Obese   7% (56)
I hate surveys!   23% (195)

I suspect that many of those that hate surveys would be fat also. These results, along with visual observation, and one can conclude that a significant percentage of Hams are fat.

Being overweight makes one less capable for emergency communications (regardless of test scores) activities. Here's a quote. "What I find the most interesting going to various hamfests including Dayton. The amount of hams who can barely get around. And these are the operators who are going to save the world! "

Here's another quote from a licenced Ham. "Just judging from my observations at hamfests I think a higher than average number of hams are overweight. However, remember that the average ham is about 60 years gold and ham radio is a sedentary hobby anyway."

Ham Radio operators tend to be overweight. There is a logical reason for this. Lack of physical exercise and poor restraint in one's diet makes one overweight. Spending hours on contests,nets, CW, etc requires little physical activity. If one is in a hobby with little physical activity one tends to gain weight. So, "active" contesters tend to be inactive.

Here another quote. "I was amazed when I found out how big I'd become - 130kg! Most likely due to lots of sitting around operating and listening on the radio, so I did some research and was quite suprised that I will need to lose around 50 kilograms to get back to a normal weight. I haven't weighed that since high school! But I have gone on a diet and am now getting regular exersize (I'm walking 4 km a day at the moment) If your not careful, Ham radio can be hazardous to you health! (apologies to the fit hams out there!) Cheers!"

Please keep in mind that this simple calculation does not take into account
percent body fat. The body builders for example would come out "fat" on
this calculation yet many have a percent body fat that puts them in the lean
category. This calculation is, at best, a rough guide.

Also, Americans in general are overweight and underactive. Many people
(self included) would be better off by getting more exercise and
losing weight.

Talk to your primary care physician. I am sure he or she would
recommend weight loss for many of their patients, and have a list of
reasons why.

Happy trails,
Gary (net.yogi.bear)

Go to URL:
http://www.adrenalineadventures.net/news/330.html
And find nearly 20% of americans are obese
QUOTE:The 2000 national obesity average of 19.8 percent is up from 12
percent in 1991, according to a government survey. Twenty-two states had a
rate last year of 20 percent or higher, while no state had a rate that high
in 1991, the authors said in Wednesday's Journal of the American Medical
Association.

According to the statistics you quoted only 18% of hams owned up to
obesity -- less than the national average !!!!!!

So why would you single out Amateur Radio Operators ???

Besides what the hell difference does it make ???

Take your generalizations to rec.obese.overweight -- perhaps

Rod 6'1" 71 years old and 195 lbs.

This kind of uninformed post places a bad rap on Amateur Radio -- why do you
want to do this ????
--
I Doubt, Therefore I Might Be

Hey,

Anyone interested ? I got this from a dead valve pH meter, it is a
high precision pH meter, horizontal scale from 0 to 14 pH and from 0
to 800 mV . Meter impedance 13.5 ohms .

I also have the following valves, from the same meter .
CV4024 dual triode, seems OK, heaters work . Good condition.

Mullard EF37A, unknown condition

Mullard ME 1400, unknown condition

-Andre

I have one left of these units I evaluated. The video transmitter is a 1.2GHz, 800mW (.8W), very small, will fit in matchbox, runs on 9-12VDC, 125mA. Receiver is tunable with antenna / power supply. No audio, just crisp video. photos upon request. I will sell unit with color or B&W CCD camera if you like. Unit is small enough to fit anywhere.
Size (mm) 43 x 32 x 4

Asking $300 free shipping, lower 48 states, paypal or POSTAL mo only.

Amateur Radio Newsline™ Report 1311 – September 27, 2002

Amateur Radio Newsline report number 1311 with a release date of Friday, September 27th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Unlicensed stations invade the low end of 20 meters and a tower finding in California highlight this weeks Amateur Radio Newsline report number 1311 coming your way right now.

(Billboard Cart Here)

**

INTRUDER WATCH: WORLDWIDE QRM FROM INDONESIA

Unlicensed stations allegedly operating from Indonesia are causing havoc to the D-X beacon monitoring system on 20 meters. Its interference being heard around the world as we hear from Q-News Graham Kemp, VK4BB:

--

The presence of Indonesian non amateur groups on the various amateur band frequencies in the 40 and 20 meter bands is causing severe concern for all the amateurs of Region 3 and the world over. While they use amateur radio frequencies for their regular communications, you will never miss the many calls for Prayers and the many jokes and Kookaburra pattern of laughing with old men and young ladies together.

The 40 meter band has several channels of 5 kHz intervals from the lower edge and these stations have their breeding grounds here. They graduate to other frequencies and move to 20 meter band, where they are on either side of the International Beacon frequency of 14100 kHz.   Many of us in Region 3, cannot monitor any NCDXF/IARU beacons on this frequency.

Even though this QRM from Indonesians has been reported month after month to telecommunications authorities, so far nothing seems to be happening get them off the air.

--

If you hear this QRM, please report it to your nations Intruder Watch coordinator.

(Q-News)

RADIO LAW: COURT RULES CITY CANNOT RESTRICT BUSINESS ANTENNA USE

A California Court of Appeals has ruled that a city cannot regulate the type of transmissions that an FCC license holder can broadcast. It also says that a city ordinance that prohibited a license holder from broadcasting commercially is preempted by federal law. Amateur Radio Newsline’s Bruce Tennant, K6PZW, says what the city of Rancho Palos Verdes was trying to write its own rules on this one:

--

Mark Abrams, WA6DPB, lives in Rancho Palos Verdes California. He is an amateur radio operator and with city approval, Abrams built a 40-foot antenna and 52-foot antenna in the backyard of his home. The city’s approval of the towers was contingent on their use being limited to non-commercial applications only. Abrams is also the owner of a business that sells and services two-way radio equipment and holds 76 licenses issued by the FCC which permitted the use of his antennas for commercial purposes.

--

Abrams: Audio Onlt at www.arnewsline.org.

--

Abrams says that he never used the two city-approved towers to receive or transmit on frequencies for commercial use. Instead, he used portable antennas mounted on tripods in his backyard and on a mobile tower trailer which he parked in his side yard.

But in 1998 and 1999, the City of Rancho Palos Verdes monitored radio transmissions from Abrams's property and detected the commercial use of frequencies. The City stated that these transmissions were in violation of an ordinance that required FCC licensees to obtain a conditional use permit from the city's planning commission to operate commercially.

--

Abrams: Audio only at www.arnewsline.org

--

The City of Rancho Palos Verdes and State of California filed an action seeking an injunction to bar Abrams from, among other things, operating his antennas for commercial purposes. Abrams answered the complaint and filed a cross-complaint of his own. It he claimed that federal law preempted the City's ordinance because it prohibited the use of frequencies allocated to him and his customers by the FCC.

--

Abrams: Audio only at www.arnewsline.org

--

The court says that he can use his antennas for commercial purposes without a city permit. It says that federal law preempts the City's ordinance banning such use because the Rancho Palos Verdes requirement that Abrams obtain a permit to transmit a commercial broadcast was preempted by federal regulation. It says that Abrams's FCC licenses enable him to operate commercially on certain frequencies and the City of Rancho Palos Verdes limitation on his rights are in conflict with federal law. And that’s good news for WA6DPB.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.

--

The Court concluded the City does hold zoning authority, but such authority is limited to the placement, construction, and modification of facilities used for commercial mobile radio services only. (ARNewsline™)

**

RADIO RULES: UPDATE ON NTIA VS. PROPOSED 5 MHZ HAM BAND

Some good news concerning the National Telecommunications and Information

Administration opposition to a new Amateur service allocation at 5 Mhz. This from ARRL President Jim Haynie, W5JBP, and General Counsel Chris Imlay, W3KD who say that they are now optimistic about reaching a resolution to issues that could otherwise block plans for the band.

The two met with representatives of the government agency to discuss the NTIA concerns. Haynie says that they came away with a feeling that the NTIA was willing to work with the ARRL to resolve concerns. Until surprise opposition surfaced the FCC appeared to have put ARRL's request for a new, domestic-only, secondary amateur allocation at 60 meters on the political fast track. (ARRL Bulletin)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Three Rivers Amateur Radio Club repeater serving Philadelphia Pennsylvania.

(5 sec pause here)

**

RESCUE RADIO: HURRICANE ISADORE STRIKS

On Tuesday, September 24th, the FCC declared that a general communications emergency existed for Alabama, Florida, Louisiana, Mississippi, and Texas. This as hurricane Isadore approached the region.

The declaration requires amateurs not use 3.873 MHz during hours of darkness and 7.285 MHz during daylight. Both frequencies are to be protected plus or minus 3 kHz. Only amateurs taking part in the handling of emergency traffic are to use these 6 kilohertz slots.

The FCC said the communications emergency could last as long as 14 days but it actually remains in force until its rescinded. Keep an eye on the ARRL website newspages for ongoing updates on ham radio involvement in this emergency. Its in cyberspace at www.arl.org (From ARRL bulletin.)

**

HAM RADIO IN SPACE: V-U-SAT’S MESSAGES FROM ORBIT

A new ham radio satellite to be launched by India wants to carry your message. This, according to VU2NUD who is the coordinator for Amsat-India.

VU2NUD says that V-U-SAT will carry a beacon system with the ability to play back pre recorded messages on command. They will be transmitted in F-M voice for all the world to hear and your words could be among those it broadcasts from space. Here’s how:

Think of short, meaningful and apropos messages no longer than 15 seconds in duration. It could be related to ham radio space operations, amateur satellites, famous quotes, sayings or whatever. Then send it along to VU2SBJ by e- mail to sri@ebhats.com and a copy to ham@vsnl.com. Mark clearly in the subject: Message for Beacon. Then wait to see what V-U-SAT eventually has to say. (ANS)

**

ENFORCEMENT: FCC SETS ASIDE LICENSE RENEWAL

The FCC has notified Scott E. Kamm, of Sioux City Iowa that it has set aside the renewal of his Technician class license grant for N0UGN. The Commission said it took the action based on recent complaints about the operation of Kamm’s station and questions regarding his qualifications to be a licensee.

The FCC notes a Warning Notice by the Enforcement Bureau sent to Kamm last February 5th. The agency says that the warning was related to Kamm’s alleged use of transmitting equipment on 156.300 and 174.000 MHz without a license, and deliberate interference to an Amateur repeater operating on 146.910 MHz. The letter also pointed out that Kamm’s address in the database was incorrect. And subsequent to that warning notice the FCC says that information came to its attention that Kamm had apparently provided radio equipment to an unlicensed minor residing in Waterbury, Nebraska, and had instructed him on how to operate on the Marine Band and other frequencies.

In his February 11th response to the FCC Warning Notice, Kamm denied setting up radio equipment for the minor, and also stated that he had sold all of his radio equipment. But the FCC says that it has all of these complaints under review and that Kamm will be hearing from the agency again in the not to distant future. (FCC)

**

SAFETY ALERT: FLUKE METER RECALL

Test equipment manufacturer Fluke Corporation has announced a voluntary recall of certain models of its digital multimeters. This because of a delay in readings on the A-C scale above 500 volts.

According to a company release, the meters can take more than 18 seconds to reach a final reading. This could lead users to think that the voltage is lower than it actually is.

The meters involved in the recall are models 175, 177 and 179 of which 17000 were sold in the United States. All of the recalled units have a serial number below 79000000 and were sold between January and October 2001. If you have one, please call Fluke toll-free at 800-260-4819 between 8 AM and 7 PM weekdays Eastern time. More information on the recall can be found in cyberspace at www.fluke.com/rma/default.asp. (Fluke press release forwarded by WA6ILQ)

**

SAFETY ALERT: KODAK DC5000 DIGI CAMERA RECALL

A recall on a popular digital camera. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the shocking details:

--
If you own a Kodak brand digital camera model D C 5000, listen up. Eastman Kodak Co. is recalling about 75,000 of these cameras because of a possible manufacturing defect that can cause electrical shock.

According to news reports, the recalled cameras bear the model number DC5000 on the lower front right-hand corner. The cameras also carry a plate on the bottom containing the Kodak product identifier code KJCAA, followed by an eight-digit serial number ranging from 01800001 to 11700825.

The cameras were sold at department, electronic, computer and camera stores as well as mail-order and Web sites from June 2000 through August 2002. Consumers can return the cameras for free inspection and repair by contacting the company at 1-888-793-2977 between 9 a.m. and 8 p.m. Monday through Friday Eastern Daylight Time.
--

Again, if you own one of these cameras, please contact Kodak at 1-888-793-2977 between 9 a.m. and 8 p.m. Monday through Friday Eastern Daylight Time. (Kodak press release)

**

HAM RADIO ON TV: ICOM JOINS “THE HUMAN RACE”

ICOM America has been named the high frequency communications provider for the television shoe The Human Race. ICOM America has already shipped an IC-706 Mark II G to Boston for use by the show. The IC-706 and additional equipment will be used during an upcoming trek along the actual travel route to be used. The donation is the result of an agreement recently reached between ICOM America's National Sales Manager Ray Novak, KC7JPA, and the shows producer Bill Desjardins, W1ZY. (THR)

**

CONFRENCES: WSWSS IN CERRITOS CA

The Western States VHF-UHF and Microwave Conference is slated for October 11, 12 and 13 at the Sheraton Cerritos Hotel Towne Center in Cerritos California. Hosted by the Western States Weak Signal Society, the conference provides VHF and UHF enthusiasts the knowledge and tools to work DX and contests on 6 meters and up. This years banquet speaker is ARRL 1st Vice-President and VHF/UHF contester Joel Harrison, W5ZN. More information is on the web at www.wswss.org. (WSWSS)

**

RADIO HISTORY: PEARL HARBOR REPORTER S.K.

He wasn't a ham, but Hugh Lytle was a communicator in his own right. History remembers Lytle as the man whose teletype message provided The Associated Press and the world with the first account of Japan's sneak attack on Pearl Harbor back in 1941.

Lytle was the news services Honolulu correspondent and a reserve Army officer. He was awakened by the Army on December 7th as Japanese planes bombed the U.S. fleet. According to his son David, Lytle quickly left for his A-P office at the Honolulu Star-Bulletin, where he filed a brief account of the attack in progress. He then reported for military duty with the Army.

A few weeks ago on August 16th Hugh Lytle passed away. He was 100 years old. (Published reports)

**

HAM TRAVEL: FREE ACCOMMODATIONS FOR HAMS ON THE GO

From across the Atlantic comes word of an interesting program for hams who like to move around. The International Travel Host Exchange, or I-T-H-E is a program administered by the German national society, D.A.R.C. It provides radio amateurs with the possibility of free accommodation with other amateurs around the world in exchange for other hams offering accommodation to overseas amateurs.

Most International Travel Host Exchange members are in Europe, but there are also amateurs registered in Australia, Canada, India, Indonesia, Japan, Malaysia, New Zealand, Syria, Thailand and the USA. Once registered, postal or e-mail addresses are made available so that contact can be established well before any visit takes place. For more information please contact Thilo Kootz, DL9KCE by e-mail to dl9kce@darc.de.

**

SCIENCE AND TECHNOLOGY: NEW GRAYLINE STUDY REMAILER

A new Internet newsgroup has been set up to discuss and coordinate the current research into greyline propagation by the RSGB Propagation Studies Committee. It is with Yahoo and people can subscribe by sending an empty e-mail to greyline-subscribe@yahoogroups.co.uk

Yahoogroups is also the home of the Amateur Radio Newsline e-mail list you subscribe to it by sending a similar empty e-mail to arnewsline-subscribe@yahoogroups.com. ARNewsline is one word spelled a-r-n-e-w-s-l-i-n-e.

**

HAM RADIO IN SPACE: RS-12/13 - S.K.

The AMSAT News Service and the ARRL Letter both report that the Russian Radiosport RS-12/13 ham satellite appears to have died.   Jerry Brown, K5OE, reports he's received word from Russian sources that RS-12/13 went dark as a result of severe solar flare activity in July and August.

At airtime, efforts are under way to restore the satellite, but hopes for success are dim, according to Brown's Russian acquaintances. RS-12/13 were integrated into the COSMOS 2123 Russian navigation satellite, launched February 5, 1991. It’s beacons have not been heard since August 20. (ANS, ARRL Letter)

**

INTERNATIONAL - AUSTRALIA: CB RULES ARE CHANGING

The Australian UHF CB equipment standard is to change. The new standard will require that CTCSS equipment include facilities to reduce interference to non CTCSS users. Required features include a 'channel busy' warning light and a 'listen before transmit' function. The changes were required by the Australian Communications Authority following changes that legalized CTCSS signaling on UHF CB channels. The A-C-A has also informed the Australian Association of Citizens Band Radio Operators that once the standards are approved by Standards Australia, they will become compulsory for equipment manufacturers. (Q-News)

**

DX

In D-X, word that KF2XN is active as KH2 slash KF2XN from Guam for at least the next month. He operates mostly SSB in his spare time. QSL as directed on the air. (RSGB)

And BI7DX is an Isands on the Air expedition that will operate from Weizhou Island throuhgh the 4th of October. Weizhou Island is located in the Gulf of Tongking in South China with team members comming from four different Chinese provences. The operation will be on SSB and CW from 40 to 10 meters, including the WARC bands. (RSGB)

**

THAT FINAL ITEM: THE BIRDS ARE BACK

And finally this week, our favorite flying T-Hunt is about to start. This, as the famed radio tagged burrowing owls take flight once again. With the details, here’s Joe Moell, K0OV.

--

It's that time again -- migratory birds in the Northern Hemisphere are heading south for the winter. For the fifth year, ham radio operators and scanner fans are being asked to use their equipment to help wildlife biologists figure out the routes and final destinations of endangered Burrowing Owls. In previous years, hams helped determine that owls hatching during summer months in the Canadian provinces of Saskatchewan and Alberta travel over central states from North Dakota to Oklahoma, ending up in southeast Texas and northern states of Mexico. They sometimes fly over 2000 miles to their winter homes.

There aren't any radio-tagged Canadian owls to listen for this fall, but the University of Arizona is asking for ham help with 53 transmittered owls from eastern Washington state. If you live in the western USA and can receive 150 MHz signals, you could help. Your scanner or extended-range hand-held ham radio transceiver, plus an outside antenna, are all you need to join in. If you have radio direction finding equipment for VHF, so much the better.

For all the frequencies and monitoring information, go to the usual place on the Web, www.homingin.com (HomingIn is one word.) If you aren't on the Web, send postal mail to my callbook address. Again, the Web site is homingin.com

Thanks in advance for your help. From southern California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline

--

Once again, more information is in cyberspace at www.homingin.com.
(ARNewsline™)

Apparently not.

From the website:

http://www.rparker.com/Products/TwoWayRadio/FRS225.htm

The FRS radios shown here are manufactured to US and Canadian product specifications and can be used legally in these two countries only. Cobra PMR and MT model radios which are being sold and used in Europe which appear similar in design are in fact built to a different specification (Ref. ETSI 300 296) and operate in a different frequency and channel range. Likewise product specifications for similar radios in Australia, New Zealand, and South Africa also differ from those for The US and Canada and Europe. Accordingly the sale and use of FRS radios manufactured and operating under the US and Canadian approved frequency and channel ranges are ILLEGAL in Europe, Australia, New Zealand and

South Africa.

Hi,
I'm a telecommunications student at Conestoga College. I am in my
last year and am currently working on my final project. I am
designing hybrid ring mixers to upconvert a signal to 4GHz, transmit
it, then demodulate it. I need to find specifications for hybrid ring
mixers that have already been made. The reason being my professor
wants me to take one of the specifications like insertion losses,
conversion losses noise etc. and improve on it in my design. I have
looked all over for documented specifications of ring mixers but can't
find anything anywhere. Any help would be greatly appreciated!
Thanks,
Matt

Common on Bruce. I bet Bob Walker, Ron Adams or Mike Briley has something.

If all you need is specifications, try the Anaren catalog. They have well
documented specifications for the quantaties you are looking for.

On my Kenwood TS 120 hf rig, I have a problem on the 15 and 10 meter bands.
First of all when I transmit on 20, 40, or 80, I can see the meter moving on
the radio when I talk. When I use the 15 or 10 meter band, it pegs the
meter when I have the ALC button pushed in. I turn down the mic gain until
it does not do that, but then it doesn't move at all. I have not been able
to get any kind of contacts from anyone on these bands. Can anyone tell me
what might be wrong? I would appreciate it.

Hi all,

I'm a new ham and am interested in joining a closed/private repeater system. I live in San Diego and here's what I'm looking for, listed by priority:

1) Good San Diego coverage, from Oceanside to Chula Vista to El Cajon

2) Common input frequency ("voting" system)

3) Relatively small system; San Diego and maybe some of OC/Riverside coverage is plenty. It seems that a larger system might be better suited to more important communications. Correct me if I'm wrong.

4) Would like IRLP access.

5) 6m/2m/70cm - any should be fine, I care less about the band; whatever it takes to get the coverage.

Other nice things such as a private tone, or voice mail boxes, or sister system agreements would just be icing on the cake I guess. I don't so much care about an autopatch being available, but it seems that nearly all systems have this anyway.

I've read the web sites of ALERT, CalNet, WINsystem, etc. With so many systems out there, I'm a little bit overwhelmed.

As it is I already plan on joining SANDRA and PARC since it seems that they each provide some excellent repeaters. I can't imagine not sending some financial support their way!

Thanks for your help!

--Steve

Amateur Radio Newsline™ Report 1312 – October 4, 2002

Amateur Radio Newsline report number 1312 with a release date of Friday, October 4th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A new world-wide threat to ham radio on 70 centimeters tops this weeks Amateur Radio Newsline report number 1312 coming your way right now.

(Billboard Cart Here)

**

RADIO REGULATIONS: A WORLDWIDE CHALLENGE TO 70 CM

If you operate on 70 centimeters anyplace in the world, listen up. Your future access to that band is in peril. Q-News Graham Kemp, VK4BB, has the details on how a proposed satellite system could run hams off of the band:

--

It has come to the attention of the South African Radio League, SARL that the threat to the 70-cm band -- world wide -- is once again very real.   The SARL has just received a discussion paper which will be tabled at the World Radio Conference next year -- WRC-03 -- which directly targets the portion of 432 to 438 MHz for exclusive use by the planned Earth Exploration Satellite Service or EESS, due to be launched soon.

If this proposal is carried at the World Radio Conference next year it, will see this portion of spectrum allocated on a worldwide basis and this spells the death knell of all 70-cm ham radio operation.

The section of the proposal and the motivation is as follows: Agenda Item 1.38: '...to consider provision of up to 6 MHz of frequency spectrum to the Earth exploration-satellite service active in the frequency band 420-470 MHz, in accordance with Resolution 727 that was revised at WRC-2000.

--

But why target the Amateur Radio allocation at 70 centimeters? The researchers who want it say its the only frequency that will work. Again, Q-News Graham Kemp, VK4BB:

--

According to the United Nations Conference on Environment and Development -- UNCED -- held in Rio de Janeiro in 1992, there is an urgent need for assessment and systematic observations of forest cover and rate of forest degradation in tropical and temperate regions. Active space borne sensors Synthetic Aperture Radars (SARs) are needed to enable the monitoring of forest biomass.

Systems operating on frequencies around 450 MHz can penetrate the canopy of forests, and have the capability to determine the ground-trunk interaction and are in the context of forest cover information of particular importance.

Systems operating at 1.3 GHz, or higher frequencies cannot penetrate the canopy. The spectrum around 450 MHz is also optimal for monitoring of continental ice and for monitoring of vegetation and soil surfaces for desert and tropical areas.

--

More on this story in future Amateur Radio Newsline reports. (Q-News, SARL, ARNewsline™)

**

HAM POLITICS: HAM-CONGRESSMAN APPOINTED TO KEY HOUSE SUBCOMMITTEE

Back here in the U-S-A the ARRL Letter reports that Oregon Republican Congressman Greg Walden, WB7OCE, has been appointed to fill a vacancy on the House Subcommittee on Telecommunications and the Internet. Walden is one of only two amateurs in the U-S House of Representatives, and his appointment to the key House panel dealing with communications matters is considered good news for the ham radio community. Walden's selection was announced by Republican House Energy and Commerce Committee Chairman Billy Tauzin of Louisiana. (ARRL)

**

RADIO LAW: CONGRESS MANDATES DIGITAL ANTI-PIRACY

Meantime, congressional lawmakers have ordered the Federal Communications Commission to mandate technology preventing digital TV signals from being hooked up to the Internet and made vulnerable to piracy. The directive is viewed as a major victory for Hollywood film makers and other copyright owners at a time when the music business is being ravaged by Internet piracy. (Published news reports)

**

RADIO LAW: FEDERAL COURT RULES IN RF BRAIN CANCER CASE

A Federal District Court has dismissed an RF related mobile telephone brain cancer suit. According to the C-G-C Communicator, the court ruled that the plaintiffs had not provided any reliable and relevant scientific evidence to prove their case. The complete finding can be found in cyberspace at http://www.mdd.uscourts.gov/Opinions152/Opinions/newman0902.pdf (CGC Communicator)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the KA5GLX repeater serving Clear Lake Texas.

(5 sec pause here)

**

RESCUE RADIO: HAM RADIO READY FOR HURRICANE LILI

Following quickly in the wake of Hurricane Isidore, a Category 2 storm named Lili made its way across western Cuba and then took aim at the U-S Gulf Coast shoreline. Amateur Radio Newsline's Don Wilbanks, KC5MFA, has more from New Orleans:

--

According to an ARRL Bulletin, the Hurricane Watch Net and W4EHW at the National Hurricane Center in Miami are again gathering ground-level reports using ham radio for communications into and out of the affected areas.

The Hurricane Watch Net is currently activated on 14.325 MHz with traffic coming in from numerous stations. Meantime W4EHW continues to exchange meteorological data and Spanish advisories with Cuban amateurs. Many of the reports received via ham radio have proven to be valuable to forecasters at the National Hurricane Center.

Right now all eyes are on Lili as she makes her way toward the U-S mainland. On Wednesday October 2nd the FCC declared a communications emergency as Lili approached the Louisiana and Texas shoreline. As we go to air, all hams not directly involved in hurricane related emergency communications are required to avoid using 7.285 MHz daytime and 3.873 MHz from sundown to sun up. These frequencies are protected plus or minus 3 kHz. The FCC declaration will remain in effect until rescinded and could be in effect for as long as two weeks.

Monitoring the storm and ham radio traffic from one of Lili's probable targets near New Orleans, I'm Don Wilbanks, KC5MFA, reporting.

--

Official advisories on Lili and other tropical storms can be found at the National Hurricane Web site. Its in cyberspace at www.nhc.noaa.gov. Late breaking ham radio operational advisories are at www.arrl.org. (ARRL, others)

**

SPACE AND SCIENCE: HURRICANE LILI CAUSES SHUTTLE LAUNCH DELAY

And a potential threat from Hurricane Lili to the Mission Control Center at Johnson Space Center in Houston has forced a delay in the launch of the STS-112 shuttle mission. Atlantis and its six member crew are now slated to lift off no earlier than 1800 to 2200 GMT on Monday October 7th. Once on-orbit, Atlantis will deliver the S-1 Truss to the International Space Station. The crew will perform three spacewalks at the station and will transfer supplies and equipment between the two vehicles. (NASA)

**

RESCUE RADIO: VK HAMS THERE AS PHONES GO OUT

Amateur Radio has come to the rescue after the town of Bindoon in Western Australia was isolated by communications failure.

For reasons yet to be explained, the failure of the phone system on Sunday September 22nd was total. Both mobile and fixed services went dead. No calls were possible.

A ham radio knight in shining armor in the form of VK6HGM rode to the rescue. Actually he drove to a hilltop and used the Roleystone repeater on 146.700 MHz in the hills above the city of Perth to report the telephone outage. This of itself is quite a feat, as both Bindoon and Roleystone are in the Darling Mountain Range and are out of line-of-sight from one another.

Be that as it may, the call for assistance was answered by VK6AX. He had telephone service and used it to alert the authorities and brought about a happy end to the story. Within half an hour, all telephone services in Bindoon were back on line.

**

ENFORCEMENT: NET UNDER FCC SCRUTINY

Turning to news from the FCC, word that the agency is taking a close look at a 20 meter net and its control operator. The FCC’s Daryl Duckworth, NN0W, explains:

--

“The Enforcement Bureau has opened an inquirey into the Mobile Emergency and County Hunters Net operating on 14.336 Mhz. We have requested that James Grandinetti, who uses the call signs KZ2P and K2JG to respond to seven complaints about the operation of the net. The Enforcement Bureau also requested documentation supporting the club call sign of K2JG which is assigned to the Atlantic Amateur Association.”

--

The FCC’s letter to Grandinetti alleges that he harassed certain operators and banned other hams from using 14.336 MHz while he was operating as a net control station. The letter told Grandinetti that the frequency 14.336 MHz is a shared amateur frequency. As such, the operation of a net on that frequency conveys no greater rights regarding its use by Grandinetti than any other licensed radio amateur. Grandinetti was given the customary 30 days to reply.

**

ENFORCEMENT: PRIVILEGES REINSTATED

And still in the enforcement arena, some good news for a Martinsville Virginia ham. Again, the FCC's Daryl Duckworth, N-N-Zero-W:

--

"We notified Theodore Crutchfield, K4TFC, that since he has taken and passed an Element 1 code test as requested, his license remains Extra class and that he is in good standing."

--

By way of background, back on December 20, 2001, the FCC had notified Crutchfield that it was requiring him to re-take Amateur Element 1 under the supervision of the W4VEC Volunteer Examination Coordinator. This, on or before February 15th of this year. Crutchfield appeared for the exam session but did not pass. As a result, he was notified on July 16th that the Wireless Telecommunications Bureau would downgrade his license from Extra to Technician Class. A few days later on July 21st, Crutchfield successfully completed an Element I examination in Roanoke, Virginia. Now, as Daryl Duckworth put it, Crutchfield remains Extra Class and his license is in good standing with the FCC.

RADIO ACCIDENTS: HAM INJURED IN TOWER ACCIDENT

A Michigan ham has been seriously hurt in a tower fall. According to an Internet report from Allen Stap, N8OKU , the accident involved the removal of a 160 foot tower.

Stap says that the top 120 feet was removed without incident. Daylight ran out so removal of the remaining 40 feet was deferred to the following morning. On inspection, the last 40 feet appeared to be safe and the removal work began. But the base of the tower broke apart and the tower fell with the ham on board. It landed on a polebarn with the ham crushed between the tower and the roof.

The accident happened near the town of Lawton. The ham involved was not identified by full name or call sign but was described as a long time and experienced tower climber. His injuries included a broken jaw, two broken arms and a broken leg. The good news is that he is expected to make a full recovery after extensive rehabilitation.

**

RADIO ACCIDENTS: NEBRASKA TOWER COLLAPSE KILLS TWO

And a 1,965-foot television tower collapsed Tuesday September 24th in a western

Nebraska field. Two workers were killed and three others were injured.

The tower was located near the town of Hemingford. A spokesman for its owner, Duhamel Broadcasting Enterprises of Rapid City, South Dakota, said two of the workers were repairing the roof of the near-by transmission building. The others were strengthening the tower so it could be equipped with high-definition television antennas.

The structure was built in the late 1960's and was used to transmit the signal for Scottsbluff television station KDUH throughout most of the states panhandle area. It and was the tallest structure in Nebraska, and was some 500 feet taller than the Sears Tower in Chicago and 700 feet higher than the Empire State Building in New York. The cause of its collapse is not yet known. (K0NEB)

**

OPERATING EVENTS: ARRL DEVELOPING JOTA DATABASE

Jean Wolfgang, WB3IOS, of the ARRL Field and Educational Services Department writes to say that the League has set up a first ever scouting Jamboree On The Air event database. It comes as the result of requests to Jean from scouting groups looking for hams who plan to offer their services to the event. You can register your JOTA event by taking your browser to the rather complex U-R-L you will find on the web at http://www.arrl.org/FandES/ead/jota.html. T his years Jamboree On The Air takes place October 19th and 20th, local time. (ARRL)

**

OPERATING EVENTS: SHIPS ON THE AIR

The USS Cassin Young, a museum ship in Boston on a turn around cruise will operate an Amateur Radio station from her radio room during the voyage on Saturday, October 12th. Operators will pass commemorative US Naval style messages between that ship and the USS Salem. The Salem is another museum ship berthed in Quincy Massachusetts. Operation will be on 20 and 40 meters. For a commemorative certificate send an SASE and a copy of the message you hear to Bob Callahan, W1QWT, 56 Acorn Street, Scituate, Massachusetts 02166. And less we forget, of the two ships involved the USS Cassin Young is a Destroyer and the USS Salem is a heavy cruiser. (W1QWT)

EMERGING TECHNOLOGY: THE SCIENCE REPORT

Two interesting items from this weeks science page. Here are Jim Damron, N8TMW and Jeff Clark, K8JAC.

--

EMERGING TECHNOLOGY: TECHNO-JUNK PILING UP

A new study called Waste in the Wireless World: The Challenge of Cell Phones says that 130 million wireless devices will be discarded annually in the United States. This equals 65,000 tons of two-way radio garbage.

The study makes several recommendations regarding both the design of cell phones and the disposal of them. It says that the use of toxic substances in them be reduced. It also suggests that device standardization be implemented so users are not forced to purchase new phones when they change service providers or for travel. Finally, the study says that cellular telephones should be designed for disassembly, reuse and recycling.

It should be noted that the study was limited to cellular phones and other two way radio devices. It does not include the tons of VCR’s and TV sets that are disposed of each year. (Supplied by several ARNewsline(tm) listeners)

**

EMERGING TECHNOLOGY: BARCODES CAN SAVE LIVES

You know those bar codes that grocery workers scan to let you know how much your cereal costs? Well, hospitals are now using the same technology to help save lives, thanks to a computerized medication system. A nurse scans the bar code on a patient's I-D bracelet, along with a bar code found on the medication itself before administering the drug. This enables the computer to verifies and checks the bar codes to make sure the patient is getting the correct medication. A green signal tells the nurse it's okay to precede. An error warning, and red signal, alerts the nurse if something's not right.

To date, only about two percent of the nation's medical facilities use bar code technology to verify medication administration, but that number is expected to rise. Statistics show the system prevents anywhere from 84 to 264 potential errors a week at one hospital alone. (Science Today)

--

More emerging technology news, next week.

SPACE AND SCIENCE: JAPAN DELAY COMPLETION OF ISS MODULE

Completion of the international space station hit another snag. This as Japan's cash-strapped space program announces that it would delay launch of the bus-sized research module it is building for the project.

The research capsule called Kibo is the only part of the space station developed and run by an Asian country. It was scheduled for launch sometime in 2004. Liftoff of that module is now planned for April 2005 at the earliest. (Published reports)

**

INTERNATIONAL - GERMANY: DDH47 CELEBRATES 50 YEARS OF SERVICE

November 8th and 9th will see a special station on the air from Pinneberg Germany. This as Weather Service's station DDH47 will be operating crossband on 147 kHz and listening on 80, 40 and 20 meters CW to celebrate its 50th anniversary of the service. Slow speed Morse transmissions to North America are also planned. (G4NJH)

**

INTERNATIONAL: FIRST UK TO VE CONTACT

Sunday, September 22nd marked the 84th anniversary of the first radio message from the United Kingdom being received in Australia. On the 22nd of September 1918, a message of goodwill was sent in Morse code from the Marconi station located near Caernarfon. The callsign was M-U-U, and the 200-kilowatt transmitter was on 21 kHz, a wavelength of 14,300 meters. The signal was received at
Wahroonga near Sydney by Sir Ernest Fisk, an Englishman who had served under Marconi in England. The message of goodwill was published the following day on the front pages of the Australian morning newspapers. (GB2RS)

**

DX

In DX, word of the first 6 Meter contact from Afghanistan. Nick Peckett, G4KUX, writes that he made what he says is the first-ever contact on 6 metes from Kabul at 15:15 UTC on Tuesday
the 24th of September. Peckett, operating as YA4F, contacted YF1OO in Indonesia. G4KUX says that he hopes to be able to give many others their first opportunity to contact Afghanistan on 6 meters over the next few weeks. (GB2RS)

And lower in frequency, TM4ENN is a special event station in France to commemorate the 60th anniversary of the creation of the 'Normandy Niemen' air flotilla by General de Gaulle. It will be active on 40, 20, 15 and 10 meters internationally. QSL direct with an stamped and self addressed envelope to F6BZH, or via the bureau. (GB2RS)

**

THAT FINAL ITEM: BY-BY BETAMAX

And finally this week, a legend is being put to rest. After twenty-seven years in production Sony Corporation says that it will finally put its famed Betamax tape format to bed forever. Our producer Bill Pasternak, WA6ITF, takes a nostalgic look back:

--

Its said that Betamax opened the world of home video as the first practical consumer format. Sony, J-V-C and Panasonic first tried with the famed 3/4 inch U-Matic machines, but consumers were reluctant to buy a videotape machine that was bigger than most T-V sets of that era and looked more at home in a television station than their livingroom.

My own first home VCR was a Sony SL-7200 Betamax. It would record a whole hour of pretty high quality video and audio on a tape cassette that was only 3 1/2 by 6 inches in size. I paid almost $2000 for the machine and each cassette cost me close to $25. That was in the late 1970’s and despite loosing the 1980’s video format war to   VHS, Betamax held on as a niche product all these years.

Now, according to Larry Bloomfield’s Tech Notes news service, Betamax for consumer use is being phased out. This is because of the new consumer digital tape formats like Mini D V that are literally delivering a death blow to Betamax’ future prospects.

Sony reportedly will manufacture only 2,000 more Betamax machines before discontinuing the product altogether. But Beta will live on in the world of television journalism. Thats where a spinoff tape format called Betacam with suffixes like S-X and S-P became the defacto news gathering videotape of choice and have remained so for the past decade and a half.

With an SL 7200 Betamax still sitting someplace out in the garage -- gathering dust -- I’m Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.

--

And you thought that the Betamax died a quiet death many years ago!
(Tech-Notes, ARNewsline™)

Hi,

Using a 35m longwire (sloper), a mix of indoor/oudoors antenna, I experiment much QRM in my LX appartment, S5-7 or even above S9 on all HF bands.
I did several "measurements" using my TS570D RTX in a (trans)portable configuration - it is rather heavy with a mini dry battery but that works fine, Hi, - and I discovered what I suspected : the QRM I am experimenting is well located one floor up (generated by a air conditionner probably) and vanishes a few meters from the home.

As suggested a UK OM, I experiment well QRM not QRN, hopefully in a way.

Now what to do ? How can I suppress it from my radio ? How can I determine if they are direct waves, omnidirectional waves, or something else in order to know my "ennemy" ? Is there a way to determine that ?

NB. Correct me if necessary, but if this QRM is directional I could suppress it using devices like MFJ noise canceler and similar products that cancel QRM in phase opposition (using a second antenna as reference).
But if the QRM is omnidirectional there is no solution excepting moving away from the source.

Now that I know where does the QRM come from, in both cases is a dipole cut on specific bands be of some use to reduce such QRM in place of my longwire that capture all noises (if I well understood a multiband dipole catches less QRM than a vertical and of course than a longwire, so I hope such antenna could help me in solving my problem if I place it outside, in the opposite corner from the source noise, about 25m away) ? I think it is an utopic solution, do you confirm... (:-(()

What's your advice : the MFJ, a dipole, give up and go away from the QRM source... (a good idea to work during field days ! I pleasant but this is very frustrated)

Thanks for comments

73

Yes, I'm a new ham, as I stated in my post. Appreciate your comments.
I have found several systems with membership open to all. Enjoy your
private system.

With such attitude, who'd want to join your group anyway?

Private repeaters, in the context you mentioned, have NO place in the
ham bands. If you need that kind of control, go get licensed in the
GMRS band and put a repeater there.

What he was obviously looking for is a system that is run by a local
club, and open only to club members. Probably a little used one where

he can keep an HT on in case he's called, and not have to listen to chatter on end.

>So, someone adapted this joke to the ham world.... go figures...

You have to admit, the state of Ham Radio is pretty bad. Hams tend to be the people that have nothing better in their life. They tend to make (radio) contacts, when others are socializing. They tend to be overweight, and mostly male group. At the club closest to me, it is held at the Senior Center, and coincidentally >80% of the members are old.

The average non-Ham does not respect Hams. Ocasionally I have mentioned Ham Radio in conversations, and have tried to get some interest by non Hams to Ham Radio or to justify belonging to one. Most Hams do not know this, they feel the average non-Ham thinks "Hams" are CBers. Hams do not see that the public does not see them as Cbers, just plain weird. A non-Ham asked me if Hamfests are like Star-Trek conventions. Originally I went to a Hamfest with a co-worker who is a Ham. In some Hamfests are like Star-Trek conventions, but I was surprised to hear this perception by a non-Ham.

They are not respected as volunteers, and some Hams seek out volunteer opportunities, rather than being asked to volunteer. The EE Hams I know tend to be the ones that have switched over to software, or happy to not apply their skills, (not the ambitions type).

Hams tend not to do anything interesting with their hobby, despite the wide range of activities that could involve amateur radio. Ham Radio does not stand for anything really. The promise of Ham Radio in education has not been utilized. Propagation, geography, navigation, etc could be well demonstrated using an Amateur Radio theme. Part of this lies with the educational systems, they tend not to want to include this type of education, although it could be a good learning experience.

Ham Radio is mostly an appliance operator hobby. "Amateur Radio" clubs are meetings of Hams to share their interest in appliance operation, similar to a computer user club. Hams have developed a set of procedures, traditions, and jargon, many of them unnecessary. Knowing and believing in some of these traditions is what makes Ham Radio a kind of cult. There are Ham Radio secret societies and "stories" of other Hams. Some of these traditions make Hams feel like they are part of "Ham Radio".

Hello everyone

While looking at the list of Callsign Trustees with 2 or more calls at:
http://www.ah0a.org/FCC/Clubs5.htm
I put a number of the calls in the Repeater search engine at:
http://www.artscipub.com/repeaters/showrepeaters.asp

I noticed that a number of the clubs listed in the top 10% of the list
do not have a repeater listed even though they are listed as
networked clubs, repeater groups, systems and associations.
I found that to be really strange.. Dont you?
Then I looked at some of the club names and calls
This is what I found.
1) A number of different clubs have the same prefix's.
I find that confusing as it must be hard in that area
that quite a number of groups have the same suffix calls..
2) Some of the names of the clubs just scream out "Question Me"
These clubs that are named after sports heroes, the trustee or
their qth address, or other names such as the Jammers for Jesus
or the Richard Burton ARC (both who are finally being questioned
by Riley).
3) A number of different clubs that have the same issuance date
for the callsigns.. Is that strange that the boards and members
of these clubs can all agree on their calls at the same time?
4) If some of these trustees are supposed to monitor the repeaters
and other transmissions of these clubs, it must be hell to monitor
5 different repeaters at once to police the frequencies.

Ham Radio is supposed to take care of itself.. It seems that the only times
Riley
and others have anything s after pressure has been applied by many
individuals or threats of government intervention by political officals
has been used as a last result.

I know of a few cases where Riley has questioned calls and clubs in this
matter and has taken action.. That has to be applauded.

Of course there are the clubs that have provided the correct information
of the groups existance and even though these clubs have constitutions,
membership lists, participated in contests and other social events,
and even issued nice membership certificates, these clubs were
not viewed as offical due to public misguided pressures.

Riley has alot to do to clean up this hobby and he needs our help.
Some of the things that need to be done is
1) The clean up of the repeaters and airways of Jammers and
action taken when such offenders have been identified.
(In South Florida a number of offenders have been identified, taped
claiming that they were the jammer, and have been verified
but credible folks such as offical observers, ect but nothing has been
done by the FCC. And We are not talking about Flippo.)
2) Actions taken by League Officals and other Amateurs who conduct
VEC exams, Emergency Coordinators ect, that violate laws, the amateur
code and even normal decency standards that nothing is done by the
amateur Supervisory folks (ARRL, Riley ect) until threats of
legal intervention are involved.
3) The groups on the airwaves who believe that they own their
frequency because the repeater is there or that their net happens
there daily (10-10 anyone?) who do nothing when their members
openly jam QSO's on such frequency in a malicious manner..
I have been in a number of QSO's and have listened to them also.
Then these folks have the audacity to claim that the stations in the
QSO are openly Jamming them because of being on their frequency.
4) These clubs that have to be questioned.. I have written to Riley
about a few clubs that are very suspicious due to content (some on
a personal family level) and even one that on Usenet posted the true
nature of their club.. Some of these clubs have a smearing nature to
destroy certain hams and have posted that.. even using previous calls
of that ham to ensure that.

Perhaps all of this is too much for Riley to handle?
I am not here to bash Riley but if it takes public pressure to get
things to happen, perhaps we should let Riley know of this concern
so we can get action taken before this hobby gets an even blacker eye.
Some of these actions and officals belong back on CB.

You can write Riley at rhollings@fcc.gov

Im not out to start a flame war or anything which is why I didnt name
names or clubs but you can search on groups.google.com of such
occurances of what I listed above.. One such example is
"Something Smells in West Palm Beach" about a VEC exam about 4 years ago
where a handicapped VE was intimidated by the Head VE and others in the
hopes of chasing the ham from the hobby.
Riley does a good job and is not to be bashed by this letter but this
is written with the hopes that Riley will realize what the ham community
is concerned about and will focus his efforts.

If you have any questions, email me and we can discuss.. there is no need
to get into name callings or anything else.

without keying es telling, I've done well @ the past few FD's I've participated in. there are more Babes into AR than you might think......
they/she were/was weird, too. and quite bored w/ the wknd pill-pool hoppin' that goes on the other 51 weekends of the year.

luckey me....."))) es 73

PS> Hint= sked a ISS flyover(better yet- a ISS/STS dock-up(how frueidian), or an Iridium Flash to make your move............
Just another Oral Sport, IMHO.

Nice troll. You know what? I decided to study for my ticket because it was
something I WANTED to
do my whole life. In my last several decades, I've found a wonderful woman,
raised two daughters to

adulthood, published several dozen scientific papers, all of which gave me great satisfaction. But
even getting my no-code gave me plenty of satisfaction. Does that mean I have no life? I don't
think so. I think it just means I'm motivated. Motivated enough to not sit still with that
license, but you have to start somewhere.

I am MALE, but not particularly overweight. I socialize outside of radio. I don't belong to a
senior center because I'm not old enough. I guess that means I'm the 20% exception that proves your
rule?

I don't really know what your issues or agenda are, but I think that your stereotypes are not only
sad, but just plain WRONG.

Then again, getting a response like mine gave you a little bit of attention, which I suppose is why
people like you troll in the first place.

Hi,

In order to demonstrate to newbies what can be a message sent in morse
code, I am (desperately) searching waves files of CW sounds, and
specially "words" like
"73 de ON4LDU" or full custom sentences at low to medium speeds (5 to

20 words/min).

Can someone provide me such files or give me some idea on how to
record such files ?
NB. software like supermorse can do that reading external .txt files
but it cannot save the file as .wav.

My only alternative is to place my digital camera nearby my RTX
speaker and recording on the air but the .wav file is attached to a
mpeg that I cannot remove.

Thanks in advance

Thierry

Thierry:

Have you tried using a microphone on the sound card to record off the air or from a code practice oscillator?

Take a look at the scanner recorder freeware at http://www.davee.com/scanrec/index.html It outputs to a .WAV file. All you need to do is provide an input-microphone, on the air, etc.

73,

Ken

I suggest downloading one of the many free Morse teaching programs. You can usually set them to play text files, so you can demonstrate whatever you want, without the trouble of recording.

Hi Thierry
NU Morse will input text and save as a wave file.
This may be what you are looking for.

FS/T TEN-TEC 705 MICROPHONE

I have a like new Ten-Tec 705 mic has a 2 tone SSB Pulser to tune your
amp installed. Does not have the Goofy Beer Can foam head I put a
Brand new Black Round Bullet style foam Ball on the head. I hate Those
Grey beer can foam heads!. I think i still have it here if you want it

though.
I put a Brand new 12 foot Heavy Duty Motorola High Way Patrol type
Coiled cord on it Also. So you can move around in the shack. It is
currently wired for a Kenwood TS-930.
I would like to eithier sell it or trade it for maybe a Kenwood mic or
a Shure 526T. Or sell out right for 80.00 + shipping. paypal check
etc.

Thanks to all.
It seems there is also another program to download :
http://www.qsl.net/kt4av/winmorse/

I will check all that.

Subject: WTB: NON-working scanner for PARTS..........
Message-ID: <20021014214018.00293.00000154@mb-fj.aol.com>
Xref: archiver1.google.com rec.radio.amateur:4311

WANTED TO BUY...A NON-working older ELECTRA/Bearcat base scanner, model BC-20/20 (preferred) OR an older NON-working Electra/Bearcat BC-220 base scanner FOR PARTS. Need the FACEPLATE to replace broken one on mine that the USPS "killed" with a FORKLIFT!!! Will buy either JUST the faceplate OR the entire NON-WORKING scanner for parts but....the faceplate MUST be complete, intact, not cracked or broken, and in VERY good to EXCELLENT condition (no deep gouges, scratches, etc., but OK for faded silver paint around edges...)as it is THE part I'm seeking. Will pay decent price for the right one. IF POSSIBLE, pic of your unit would be MUCH appreciated WITH your Email reply. Please remember I want to REUSE the faceplate so it MUST be restorable, VERY intact, AND USEABLE !!I will answer ALL replies. Also have some vintage scanner parts for trade/barter to "sweeten" the deal as well IF DESIRED...LMK your needs.Otherwise, will buy radio or faceplate only outrite from you.

THANKS IN ADVANCE to all who reply. (<:

Subject: BEWARE!!..Doug Calladonato......
Message-ID: <20021015195657.19555.00000128@mb-fs.aol.com>
Xref: archiver1.google.com rec.radio.amateur:4313

..Be aware that a gent by the name of Doug Calladonato (njscanner@comcast.net)is selling several scanners (approx. 21 of them..) and, is willfully and maliciously misrepresenting the condition of these units to obtain a sale on them.He sold me two that he represented as in "excellent working order" and, that he "tested himself before sending them to me" that are BOTH totally non-working, useless units. I am out a SUBSTANTIAL SUM OF $$$ and he denies they were non-working at time of sale.Mr. Calladonato outright lied and denied several Emails he initially sent me that represented theses radios I got from him as TOTALLY WORKING UNITS...he says one thing IN PRINT in the original Emails then DENIES IT in the later ones..even tho' I have it IN PRINT IN MY FILES FROM HIM !! (???!!)

Upon opening the units, they were filled with poor-quality solder (attempted) repairs and had obviously been tampered with prior to the sale. The one unit has a squelch that will not close, and the unit wont even scan. The second one has such poor reception as to make it useless. If both units HAD been tested as seller stated, these problems would have been painfully obvious.
I have contacted this gent asking him for a refund and he ignores my efforts entirely. I am posting this to advise any potential customers of this seller to AVOID doing business with him Currently, I am in the process of legal action againt this crook.His actions are obviously dishonest in nature and I have adequate proof in the form of Emails from him and, two DOA radios to prove it.

Buyers beware AVOID THIS CLOWN !!.Dont get SCREWED like I did by this jerk !

HI I know that I am opening a big can of worms, but I am trying to do research and I am not having any luck. I am looking for my first rig. I live in an apartment and an outdoor antenna is going to be a big problem. There are strict rules here about them and even my satellite dish is in direct violation of them. I was thinking about getting a HTX-420 for a handheld and something like a HTX-252 for a base/mobile unit. I don't want much power because I am not going to be able to use it anyway. Any suggestions or feed back on these two radios would be great thank you.

I have a similar situation, so I placed a mobile mount antenna for 2 meters and 10 meters in the attic. The difficult thing is to get the SWR down since a vertical antenna wants a ground plane. I got around this by placing the antenna on an old computer case. I have no problems hitting every repeater in my county, and all the surounding counties with this setup.

I have no experience with the HTX-420, so I can't comment there. But I did have 2 HTX-252's both of which had to be returned because they were faulty. My recommendation would be to get a Yaesu FT-1500M. It is about $20 cheaper, has twice the power output, a TNC port, over 10 times as many memory channels, and many more features.

Hope this helps

```

FS: MFJ-9406 6-meter SSB QRP transceiver, new, unused with manual and mike in mint condition. $175.
Also an Astron switching power supply - model SS-30M - with dual meters, also in mint condition. $100
If you're in NJ area I have an assembled MFJ-1796 halfwave vertical antenna, bottom bracket cracked but can be easily repaired. Antenna works but I've changed to a G5RV antenna.
Power supply or 9406 rig shipped three-day priority mail for postal money order only. Thank you,
Harold, N2RLL

> >system then cross-checks with other eQSL users and when a match comes up
> >it automatically "sends" an eQSL.
>
> I wasn't even an eQSL user though...

Doesn't matter. The record was in the database from the log uploaded by the other operator, which of course included your callsign. Once you joined eQSL with your callsign included in your membership record, the system automatically did a search through the existing database for any records of that callsign. In that search, it picked up on the record in

the database from the other person's upload and automatically generated
the QSL.

Now JJ, something's you post are pretty good, but
this constant bashing of Cb'rs make you sound like Dave.
He's always calling people communist, you keep calling
anyone that posts drivel from anon accounts as "illegal operating cber". If
you haven't realized it yet, both sides are playing
the game, some for and some against, so it isn't to far fetched
that some are stirring the pot purposely.

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

Amateur Radio Newsline™ Report 1308 – September 6th, 2002

Amateur Radio Newsline report number 1307 with a release date of Friday, September 6th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. 222 to 225 MHz comes under attack once again, N Sync’s Bass may not fly to the I-S-S after all and an Ohio city regulates 11 meter C-B. Find out the details exclusively on Amateur Radio Newsline report number 1308 coming your way right now.

(Billboard Cart Here)

**

THE WAR TO SAVE OUR BANDS: A NEW ATTACK ON 222 - 225 MHZ

Some are calling it Deja Vous. This as big business once again sets its eyes on grabbing a ham band and converting it into a money making machine. And once again its the old 220 MHz band. David Black, KB4KCH, is here with the details:

--

Once again, amateur radio frequencies may be under siege. Large corporations wanting to become even bigger want hams off the 222 to 225 MHz band, so they can make money. This time, the challenge comes from Data Commlink Incorporated and its twenty electrical cooperatives. Data Commlink filed comments in W T Docket 02-224.

That's an FCC proposal that began innocently enough. The proposal sought to gather comments on requests for waivers to provide band management services in the 220 to 222 MHz band. That's the piece of spectrum that used to belong to Amateur Radio but which hams say was stolen by greedy businesses over a decade ago.

But page 10 of DataComlink's filing holds comments that strike straight at amateur radio. The company says quote--the spectrum at 222 to 225 MHz that is currently held by the Amateur Radio Service is being underutilized. In the early days of 220 MHz commercial regulations, amateur Service licensees argued that their spectrum was necessary and important in order to provide communications in the event of disaster or emergency. Although we take no issue with this claim, we do not feel that the 222 to 225 MHz band has been utilized as well as Amateur Radio claimed it would by so-called no-code hams in their efforts to keep a foothold in the 220 MHz arena.

The filing then presents a direct challenge to ham radio. Without citing any evidence, Data Comlink asserts that in nearly all densely populated areas, the 222 to 225 MHz band is largely quiet. The company claims that only what it terms as handful of individuals in the Amateur Radio Service even use the spectrum. Data Comlink then says hundreds of thousands of potential commercial users wait with no alternatives.

Data Comlink tells the FCC that--with considerable commercial interest already in the 222 to 225 MHz band because of waiver requests--it feels that the frequencies amateur radio holds would be much better utilized for commercial use. The company says existing users of the spectrum -- ham radio operators -- are so few in number that the economic impact on those affected would be minimal.

As for where the thousands of US hams who actually do use 220 to 225 would wind up, Data Comlink says nothing. Another issue is left unaddressed. If the FCC were to actually give the Data Comlink proposal any serious consideration, who would reimburse repeater owners the hundreds of thousands of dollars invested in their systems? DataComlink is silent on that one.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.
--

What credence will the FCC give the Data Comlink idea? That’s hard to say. Since it comes in the context of comments on another matter the Commission could simply rule that anything dealing with 222 to 225 MHz is not germane to the issue. On the other hand, the FCC could use the Data Comlink commentary as the basis for a Notice of Inquiry aimed at reallocating the 222 to 225 MHz band to commercial use. Which way they will go will not be known for a few months at the latest. In the meantime ham radio had better keep a close eye on the situation so that nothing is covertly slipped by.

The complete Data Comlink filing is on the web at http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6513289200 (From comments filed to FCC by Data Comlink)

**

RADIO RULES: BAND SHARING REQUEST FOR 70 CM

The ARRL news reports that an amateur from Virginia has petitioned the FCC to allocate eight channels in the 70-cm band for use by visitors from Europe and the United Kingdom with Personal Mobile Radio transceivers. The recently authorized PMR 446 is similar to the US Family Radio Service. Dr. Michael Trahos, KB4PGC, a physician from Alexandria, filed the petition last January, saying it would help to promote international goodwill. The FCC has designated the petition as RM-10521. (ARRL)

**

ENFORCEMENT: HAM CHARGED WITH MISDEMEANOR IN ILLINOIS TRAGEDY

An Inverness Illinois man who authorities say misused a police radio channel has been ordered to turn over all the radio gear that he owns to local authorities. Bruce Tennant, K6PZW, has more:

--

According to a report in the Chicago Tribune Cook County Judge Joseph Urso has ordered that William Bily turn over all his transmitting equipment to Barrington-Inverness police. This, as a condition of his release on bond while awaiting trial on misdemeanor charges.

Bily appeared August 30th in the Rolling Meadows branch of Cook County Circuit Court in connection with misdemeanor charges of resisting a peace officer and interfering with emergency communications. A longtime amateur radio enthusiast, Bily is said to have disrupted police communications Sunday August 25th by transmitting over the Barrington-Inverness police radio channel. When Officer Steven Graham came to his home, Bily allegedly resisted arrest. Authorities say that a struggle ensued and that during their tussle Officer Graham who was only 53 suffered a fatal heart attack.

Asserting the heart attack resulted from the scuffle, the Cook County medical examiner's office ruled Graham's death to a homicide. But Assistant State's Attorney Steven Rosenblum said that his office does not intend to seek more serious charges against Bily.

Bily's attorney, Frank Cece, asked that his client only be forced to hand over radio gear that could be used to transmit on the police radio band. He maintained that Bily, a Marine veteran who saw combat during the Vietnam War, has much equipment that poses no risk to police radio frequencies.

But States Attorney Rosenblum countered that this is not the first occasion police had visited Bily's house. The first time was on July 4th of 2000, also for allegedly interrupting the police frequency.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.

--

As part of the bond agreement Judge Urso also ordered that Bily not possess any firearms and that he not contact the family of the deceased officer. A trial is set to take place on October 2nd in the Rolling Meadows courthouse. (Adapted from information supplied by KC9RP, W9FS and others)

**

ENFORCEMENT: “RABBIT EARS” THE HAM JAMMER GETS JAIL

A CB operator from Florida with an apparent hatred of hams will spend the next year in a federal prison. Amateur Radio Newsline’s Bill Burnett, KT4SB, reports from Miami.

--

He called himself Rabbit Ears on the C-B two-way. He also harassed ham radio communications on several bands. And now, Jupiter Florida Citizens Band operator William Flippo will spend a total of 15 months in federal prison. He will also pay a $25,000 fine for jamming Amateur Radio communications and transmitting without a license.

According to the ARRL Letter, Federal District Court Judge Daniel Hurley imposed the sentence August 29th. This, following a guilty verdict on June 19th on four counts of operating a radio transmitter without a license and another four counts of deliberate and malicious interference.

According to trial testimony, Flippo primarily had targeted members of the Jupiter-Tequesta Repeater Group for jamming and regularly interfered with amateur operations, especially on 10 and 2 meters, over an approximately three-year period. He has been in custody since the guilty verdict and underwent a psychiatric evaluation prior to sentencing.

At the sentencing, Flippo reportedly wept. He said that he had turned over a new leaf and claimed he was sole support for his wife and two daughters. But Judge Hurley was not impressed. He told the 60 year old Flippo that he was old enough to have considered the consequences of his actions. Hurley also alleged numerous incidents of perjury in the course of Flippo's testimony during his six-and-one-half day trial.

Judge Hurley also told Flippo that wants a full financial disclosure from him. And when he does get out of jail, Flippo will spend another year on supervised probation during which he cannot own radio gear or firearms. In other words, for the next two years the law will be watching this C-B’er like a hawk.

In Miami, I’m Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.

--

Judge Hurley ordered Flippo to immediately start serving his sentence. The former C-B operator was reportedly led into and out of the courtroom in shackles and leg irons. (ARRL, others)

RESCUE RADIO: HAMS, CB’ERS, GMRS AID AFTER TORNADO

Hams, C-B’s, and just about anyone with a radio system not dependent on phone lines is pitching in to provide emergency communications in Ladysmith Wisconsin. This follows a devastating tornado on Monday, September 2nd that destroyed a major part of the town and completely knocked out the areas communications infrastructure. Twenty people were injured.

As we go to air, there is still no wireline telephone service and cellular service is spotty at best. The personal communications teams are reportedly augmenting local law enforcement and fire services in relief efforts. Wisconsin Governor Scott McCallum declared the Ladysmith a disaster area. (Published news reports, on-air reports)

HAM RADIO IN SPACE: RUSSIA TELLS BASS HES OUT OF ISS TRIP

A Russian space official said on Tuesday September 3rd that N Sync singer Lance Bass has been asked to leave Russia's cosmonaut training program and will not be the world's third space tourist. Sergei Gorbunov, a spokesman for the Russian Space Agency, said the decision to end negotiations with Bass was made in connection with what was termed as violations of his contract to fly on a supply mission to the orbiting outpost.

Bass began training in July at Star City, and just returned to Russia on Sunday after spending a week at NASA's Johnson Space Center in Houston with the other two crew members. There, Bass was trained in use of several station systems including the ARISS ham radio station. Now, Gorbunov said Bass, who had hoped to fly to the Space Station aboard a Russian Soyuz rocket on October 28th, would be leaving and would not be permitted to return.

Gorbunov said that in place of Bass, the Russians would likely send up a cargo container with extra equipment needed on the International Space Station. Gorbunov said the container has already been prepared and is ready to go.

But Bass’s representatives have a different story. They say that that its all a misunderstanding and that the 23 year old singer should be back in training shortly. If he does make it to orbit, Bass will become the youngest person to ever fly in space. (Published news reports)

RADIO LAW: LANCASTER OHIO HAS NEW CB CONTROL LAW

Lancaster Ohio now has a new City Ordinance to put teeth into local enforcement of the FCC’s Part 95 CB radio rules. The measure was passed on August 26th and is the handi-work of Lancaster City Law Director David Trimmer and a local area radio amateur named John Hilliard, W8OF. The two put the legislation together over the last several months and sent it twice to the FCC office in Farmington Hills, Michigan for review and comments.

Under the law, CB radio users who operate on what’s termed as an unlawful frequency or using excessively powerful equipment could be cited for a misdemeanor, with a maximum penalty of 180 days in jail and a $1,000 fine. Ham radio operators are exempted because the city says that they are trained, licensed, are regulated differently under federal law.

City officials estimate there are at least 250 people operating 11 meter Class D CB radios in Lancaster and not all follow FCC rules. The city's law will give prosecutors a tool to fight these abuses. The FCC believes that Lancaster is the first municipality to enact such a far-reaching ordinance to regulate CB radio within the city limits. (ARNewsline™ from information supplied by W8OF)

**

ENFORCEMENT: YUCAIPA CALIFORNIA TEST SESSION INVESTIGATION CONTINUES

The FCC audit of a W5YI-VEC Amateur Radio test session in California is continuing. The ARRL Letter reports that so far, the probe into a September 1, 2001, examination session in the city of Yucaipa has led to the suspension of seven volunteer examiners and the cancellation of five Amateur Radio licenses.

The W5YI-VEC's Larry Pollock, NB5X, said possible irregularities surfaced earlier this year in the form of an e-mail and a telephone call concerning two candidates at VE sessions in Yucaipa. Pollock said that one of the reports was that a license had been purchased in California. The other was that the individual in question could not copy code, and that if he had passed the exam, he had done so fraudulently.

After considerable investigation on his own, Pollock said he saw enough questionable data that he felt retesting was in order. That’s the remedy he proposed to FCC Special Counsel for Enforcement Riley Hollingsworth, K4ZDH. That was the action taken and also the action which lead to the five cancellations. The FCC’s Hollingsworth said the agency would continue to investigate other examinations administered by the VEs involved in the September 1, 2001, session in Yucaipa. (ARRL)

**

ENFORCEMENT: MAN MADE QRM ON 20 METERS

The Maritime nets on 14.315 MHz are reporting problems with interference. VK2UW says that the interference appears to be man made and regularly appears as both noises and CW type transmissions. The Australian Communications Agency has been notified and is monitoring. (Q-News)

**

HAMFESTS: TRW SWAP MEET FOR SEPTEMBER CANCELED

A reminder. If you are planning to travel to Los Angeles this September to attend the famed TRW Swap Meet, choose some other month. This is because the giant swap-feast has been canceled because a corporate event will be held at the Space Park Facility on Saturday, September 28th.

Only this month, September, is canceled. There will be a TRW Swap Meet the last Saturday of the month in October, November and December. For more information visit http://w6trw.com on the world wide web. (TRW ARC)

**

CONVENTIONS & HAMFESTS: BOXBORO MASS GROWS

Attendance at this years Boxboro Massachusetts Hamfest seemed to be back to its normal level of about 3,000. This continues an upward spiral first noted a few weeks ago at the Huntsville Hamfest in Alabama.

According to observers, the exhibit hall was busy all day Saturday and there seemed to be an increased number of big-ticket sales. This again mirrors what happened at the shows in Huntsville and to a lesser degree in Escondido California that same weekend.

The biggest draw in the forums area was once again Bob Heil, K9EID, and his audio clinic road show. Bob had about 100 people in the room, many of whom left the session and immediately hit the dealers to buy the appropriate peripheral gear.

Boxboro is one a dwindling number of hamfests and conventions that still has an annual banquet. This years speaker was ARRL President Jim Haynie, W5JBP. Also on the program was live music from a four piece band.

How good was this years Boxboro Hamfest? Vertex-Standard’s Chip Margelli, K7JA sums it up this way. He says that he couldn't leave the booth or take a break until 4:15 Saturday afternoon. And that kind of says it all. (K7JA, others)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

INTERNATIONAL - SOUTH AFRICA: HAMS CONTINUE TO ASSIST AT WORLD SUMMINT

Ham radio is continuing its support effort at the U-N Sponsored World Summit on Sustainable Development. With the latest, to Johannesburg and Hans van der

Gronnendal, ZS6AKV:

--

AUDIO REPORT ONLY: You can hear it at http://www.arnewsline.org

--

More on ham radio at this important world summit next week.

**

INTERNATIONAL – SOUTH AFRICA : JOHNNY NEETHLING, ZS1GB – S.K.

Still from South Africa comes the sad news that Johnny Neethling, ZS1GB, passed away on Friday 19 July. Neethling as 80 and was licensed just after World War 2. ZS1GB was well known in Radio and TV circles. He was also involved in maintaining equipment in the first the first heart transplant operation to take place in South Africa. (RSGB)

**

INTERNATIONAL - GIBRALTER: WILFRED GUERRERO, ZB2IB – S.K.

Q-News reports the unexpected death of well known Gibraltar radio amateur Wilfred Guerrero, ZB2IB.   Guerrero was 55 years of age and for many years was the mainstay of amateur radio in Gibraltar. Most recently he pioneered, virtually single-handedly, the introduction of the Foundation License in that nation. (Q-News)

**

INTERNATIONAL - AUSTRALIA: VK UHF CB TECH STANDARDS CHANGE

The technical standards for C-B gear used in Australia are changing. Q-News Graham Kemp, V-K-4-B-B, reports from down-under:

--

APCNews says the VK UHF CB equipment standard is to change. The standard will require that CTCSS equipment include facilities to reduce interference to non CTCSS users.   Required features include a 'channel busy' warning light and a 'listen before transmit' function. The changes were required by the Australian Communications Authority following changes that legalized CTCSS signaling on UHF CB channels. From Q-News Australia, I’m Graham Kemp, VK4BB.

--

The change affects only the Australian U-H-F Citizens Radio Service. No other bands are affected. (APC News, Q-News)

**

INTERNATIONAL – SCANDINAVIA: NEW MAJOR HAMFEST IN EU

A major new European amateur radio event will take place in Gothenburg Sweden for the first time in April next year. The Scandinavian HamVention 2003 will be a big hamfest where Scandinavian and other European radio amateurs can get together. There will be a large exhibition with amateur radio dealers from all over Europe and it is planned to offer Scandinavia's biggest flea-market yet, allowing radio amateurs to trade, buy and sell everything to do with our hobby. A traditional Scandinavian amateur radio dinner will be held and there will also be a special ladies' program. The Swedish national amateur radio organization, the SSA, will hold its annual meeting at the same time. Further details are on the Scandinavian HamVention website http://www.scandiham.com/. (GB2RS)

**

DX

In D-X, the Canadian licensing authority, Industry Canada, has authorized the use of special prefixes to celebrate the 125th anniversary of Japanese immigration to Canada. The special prefixes will be on the air from the 1st of September until the 31st of October.

And this for those listening across the Atlantic a lot higher in frequency. Word from the Radio Society of Great Britain that the G-B-3-N-W-K microwave beacons located in North West Kent are currently non-operational. The beacons, which usually transmit on 1296.81 and 2320.85MHz are off the air until further notice due to site problems.

**

THAT FINAL ITEM: 911 REMEMBERED

And finally this week, we pause to remember the tragedy of Tuesday September 11th 2001. Here’s Amateur Radio Newsline producer Bill Pasternak, WA6ITF.

--
I’m going to tile this as an editorial. Ill also promise to keep it short.

We have all heard these words before. “September 11th, 2001 is a day that changed all of our lives forever.”

The pictures are still there in our minds eye. The giant Boeing jets crashing into the World Trade Center. The buildings crumbling to the ground. The fire at the Pentagon. The scorched earth in Pennsylvania.

And the other scenes. The ones only known to ham radio. Those of the radio amateurs from New York, Washington and Pennsylvania who sprang immediately into action. The hams from across America who dropped everything, grabbed their H-T and traveled sometimes thousands of miles -- paying their own way -- to become the second, third and forth wave of relief operators and volunteers.

No, ham radio was not on the front page of newspapers. Hams were not the lead story on the evening news. The tragedy of 911 was the story. The job of ham radio was to be the carrier of the message so that aid and comfort could be brought to the victims of this horrific and cowardly act of terrorism.

What 911 showed is that our loose knit fraternity can come together when the need arises. That we maybe called radio amateurs, but that we are communications professionals. That ham radio is there when it is needed.

On 911, ham radio did the job its people have trained themselves to do. The hobby has since moved on. So has our nation. But neither will ever be the same.

I’m Bill Pasternak, WA6ITF
--

We pray that a tragedy like 911 never happens again.

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Hi all,
Have my 8100R for abt 2 years. Beenm back to the UK already once and would
you beleive it - they lost it!! Unfortunatly for me they found it when I put
the pressure on.
Anyway up to the present - The rig transmits for abt 1 minute then loses
power, even though the fan stays on and red led stays lighting.This happen
all the time. no problem with RX.
Any thoughts ???

Could someone suggest a weblink on how to pursue Federal prosecution of illegal and unlawful operators? I'm in the Philadelphia are and have heard (on 2 meter frequecies) explicit sexual discussions on how to have sex with children, music broadcasts, singing, extremely crude language, and even CB radio (channel 19's audio) being transmitted on the 2 meter frequencies. All those I heard (about 10 individuals) appear to know each other and some are actually giving their licenses identifications. If I'm just wasting my time in seeking to bring these individuals to justice and clean up my local 2 meter frequencies, please be honest and let me know and I'll just sell my new 2 meter radio.

I believe the FCC likes you to say you have recordings of the infringing activities.

Call the FCC regional office in Philadelphia and ask to speak with an agent, give them the freq. and time; recordings do help.

From the FCC.gov website:

The Northeast Region consists of six District Offices located in Boston, MA; Chicago, IL; Columbia, MD; Detroit, MI; New York, NY; and Philadelphia, PA; and two Resident Agent Offices located in Buffalo, NY and Saint Paul, MN

Phone given is (888) 225-5322, but that may just be the main general line. Check the local phone directory.

Let us know if they respond to resolve this!

A

There is a new Ham Radio Portal online at http://www.hamradio-portal.com

This Portal contains news, Information and=20

special topics like Echolink software and many more.

It has a Weblink and download database.

A new Webboard to discuss topics is also there.

You can also submit news and topics what

comes available on the top of the page!

It should not to be in compete with other Portals.

Just a new one with a new look and nice features.

We hope to see you there!

Andre

Proud to be 13wpm Generals? I just got General last month and I'm a
30wpm General, although I only had to take the 5wpm test.

The good news is that you can now take the Extra class exam and not
have to worry that you have only passed 13wpm.

David

It was long ago.
Most of the things they mention are illegal in Michigan. Due to the public
service provided by the Amateur Service (which has a very good reputation in
the state) we receive exceptions to much. However, no TV screens are
allowed in the front seat.   Navigation devices are in a grey area. They
had to change the law to allow for the new electronic dashboard displays.
No scanners unlee you are a ham, or have a license for it.

I don't think they'll say anything about packet either, unless you are wobbling all over the road. However anyone who is operation packet while driving is running about half a battery short of a full pack. Even in Emergency Services we pull over.

That is quite understandable. Imagine if there is a short when you plug the
new one in. <:-))

Our department blew up a substation by leaving the grounds on.

How so?
It doesn't matter what they are running in the course of business. They all
cary guns too.
What they cary has no effect on what you or I can cary, or use.

I did!

Here anything over 80 feet needs to be engineered. I was going 100 with a
mast out the top to 127. Considering I put the entire thing up by hand,
that would have been too many hours to lose.
I showed the engineer the ROHN catelog figures, what I planned, he said
"Looks good to me" and gave me a permit. He stopped by once to look at he
guy anchors and tower base...Never came back.

Ever hear of tuning to a different frequency? You are not required to listen to them, you know.

from an OLD MFJ 1278B manual (1993), The MFJ-1278 J2 pinouts are
1=microphone audio
2=Receiver audio
3=PTT
4=Ground
Is that what you need?

forrest

SIMPLE MOD

You change all crystals in the 10 meter position to 1mhz LOWER

That gives 26 to 28 mhz operation and that is all you need to do 98% of the time.

This is what this hypocrite promotes for himself but chastises others for doing. BEGIN OF QUOTED MATERIAL:
****
08/23/99

rec.radio.cb

O4AT trade proposal...

Hi Steve

I have a MINT Radio Shack TRC 457 base ssb unit. It was made in 78!

Has the Uniden 858 PLL chip. I also have the SECRET CB modification info for this radio, The radio itself has NEVER been opened up. It works and looks like new. Comes with a RS amplified base station mike ta boot!

I would take $50.00 cash and the 04AT for it, if the HT is in good shape. Obviously we would each pay our own shipping.

n8wwm@aol.com

****
10/22/00

alt.ham-radio.mods

Re: ft 102 cb mod details required

Take all 4 10 meter crystals out...replace each one with one 1mhz lower retune output slightly thats it, then you have 26.0 to 28.0 radio

n8wwm@aol.com

****

Lots more there Doug, so don't lie about how you don't do illegal activities.

Hi,

I'm searching a japanese ham or a ham reading Katakana char. and that
could access to the JA callbook in order to help me to associate some

dozen JA callsigns (max 100) with their respective prefectures, cities
and guns.
My objective is to complete the JCC and JCG awards.

Please send your proposal to my personal email.

Thanks

Thierry

Allot of different parts for the builder. Turns counter, Verinier
Dial, National RF 175A plate choke, 3 blowers, several potentiometers,
several PJ-068B mic plugs for collins and drake, dow key relay,
several other relays for your amp or radio project. 2 coil forms, 8 HV
caps, ! filament transformer 5v@20 amps, a HV diode board, 2 pill
transistor amp with a 13.8 volt power supply built in to run a mobile
in the house unit runs off 110 volts. A nice collection of different
sized coils. A couple more small transformers. More items you will get
everything in the pic

FS CERAMIC/WIRE WOUND RESISTORS
    I have a nice lot of 75 wire wound/ceramic resistors. They are
different values and wattages. All checked and marked. this is for the
whole lot.
    They are all pretty good size,high wattages. Just what you need
for a good stout amp.
    i have a pic.
30.00 + shipping or make me a offer.

     FS 2 BIG Neutralizing Capacitors
    Two neutralizing capacitors for controling the stability of that
big amplifier project your planning, These are VERY NICE AND BIG.

    Capacitors stand 6" high and disk diameter is 2". Both caps are in
very good condition and I would rate at a 8+. There are no pits on the
aluminum or chips on the ceramic.
    20.00 each +shipping

Amateur Radio Newsline™ Report 1309 – September 13th, 2002

Amateur Radio Newsline report number 1309 with a release date of Friday, September 13th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A world ham radio license inches closer while the N-T-I-A says no to 5 MHz for U-S hams. These stories are first on Amateur Radio Newsline report number 1309 coming your way right now.

(Billboard Cart Here)

**

RADIO REGULATIONS: WORLD HAM LICENSE A BIT CLOSER

A world wide universal ham radio license is a bit closer. Q-News Graham Kemp, VK4BB, reports on a meeting that has opened yet another door:

--
AUDIO REPORT ONLY: NO TEXT AVAILABLE. Audio is at http://www.arnewsline.org
--

It had been hoped that a world license would have been in place by the turn of last century two years ago. Now pundits are suggesting the end of 2009 or maybe 2010. (Q-News)

**

AMERICA AT WAR: HAM RADIO COMMEMORATES 911

Amateur radio was at ground zero in New York, Washington and Pennsylvania a year ago. And on the first anniversary of the terror attack that felled the World Trade Center, hams were there once again as the nation paused to reflect. The day before the 911 commemorative ceremonies were held the United States was put on a heightened state of alert for terrorist activity. Color orange the government calls it. And since 911 the words to live by all around the world have been – be vigilant.

Ed Note: From the President of the ARRL addressing the hams of the world on an Internet link-up, to hams in Florida operating air-mobile carrying American Flags to hams in NYC assisting at ceremonies, the Amateur Radio community involved itself in 9-11-2002. Much of it appeared to be planned at the last minute and only now are reports coming into our newsroom. Rather than rush together a report that would not do justice to all that was done, we plan to do in-depth coverage in next weeks newscast. (ARNewsline™ from listener reports)

**

THE CHALLANGE TO OUR BANDS: ARRL EXPECTED TO FILE ON THE 222 MHZ ISSUE

The American Radio Relay League is expected to file reply comments in opposition to the initial comments of Data Commlink Incorporated. This, in FCC W T Docket 02-224.

As reported last week, W T Docket 02-224 merely sought to gather comments on requests for waivers on spectrum management services in the 220 to 222 MHz band. But Data Commlink decided to use it as an opportunity to strongly suggest that the FCC remove 222 to 225 MHz from use by radio amateurs and transfer it over to commercial service. Primarily for use by the electric power cooperatives that it represents.

Word is that the League will vigorously defend the 222 to 225 MHz spectrum. Keep an eye on the ARRL website news pages at www.arrl.org for the latest. (ARNewsline™)

**

THE SPECTRUM FIGHT: NTIA HEAVES POTENTIAL MONKEY WRENCH INTO 5-MHZ BAND PROPOSAL

The National Telecommunications and Information Administration -- the N-T-I-A -- has recommended that the FCC not grant an ARRL petition for a domestic-only secondary Amateur Radio allocation at 5 MHz. Amateur Radio Newsline’s David Black, KB4KCH, has the details:

--

The N-T-I-A regulates radio spectrum allocated to the federal government. According to the ARRL Letter, the last-minute negative recommendation from that agency followed hundreds of largely favorable comments and reply comments from all sorts of organizations and from many individuals.

But in an August 21st letter, the N-T-I-A's Fredrick R. Wentland wrote that federal agencies are making extensive use of High Frequencies for emergency services. This, Wentland says, includes communications support for the Department of Defense, the Coast Guard and Department of Justice.

Wentland, , who is the agency’s Acting Associate Administrator for Spectrum Management went on to say that the N-T-I-A believes the Commission's current proposal does not adequately provide for protection from harmful interference to these critical government operations primary in the band. He says that without a more complete understanding of the interference potential to federal operations, the N-T-I-A believes the secondary amateur allocation would be "premature.”

But Wentland did offer up a carrot so as to speak. He said that N-T-I-A was willing to work with federal agencies, the FCC and the amateur community to determine whether some future accommodation for amateurs at 5 MHz would be possible. However that could include limitations on power or emission types, a reduction in the size of the proposed band, the use of discrete frequencies or geographical restrictions.

From the South-East Bureau, I’m David Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

Wentland's letter arrived at the FCC beyond the cut-off date for reply comments for ET Docket 02-98. None-the-less, the N-T-I-A is a powerful agency and when it speaks, all other agencies tend to listen and to obey. (ARRL)

RADIOSPORTS: US TEAM RETURNS FROM ARDF CHAMPIONSHIPS

This year's team of eleven American on-foot foxhunting enthusiasts were up against more than 300 competitors from 28 other nations, and they came within two minutes of bringing home our first medal. Nadia Mayeva from Mooresville, North Carolina took fourth place in her age category by finding all her required transmitters in 109:02. She was edged out by a YL from China, who won the category bronze medal in 107:20.

Gyuri Nagi KF6YKN of Maspeth, New York placed fifth out of 50 in the hotly-contested M40 category. Tthat's males ages 40 through 49. He and his family put on a one-week training camp for members of Team USA near his native hometown in Hungary during the week before the championships.

This was USA's third trip to the World Championships, which are held in even-numbered years at locations chosen by the International Amateur Radio Union. Team members ranged in age from 33 to 60. Co-captains were Dick Arnett WB4SUV of Erlanger, Kentucky and Bob Frey WA6EZV of Cincinnati, Ohio. Karla Leach KC7BLA of Bozeman, Montana represented USA and IARU Region 2 on the International Jury overseeing the competitions. Her assignment was Course Marshal at one of the foxes.

Complete results for all ARDF Team USA members plus lots more information about the sport are now at Team USA's official Web site: www.homingin.com That's homingin -- one word -- homingin.com

From sunny southern California, this is Joe Moell K-zero-Oscar-Victor, for Amateur Radio Newsline. (K0OV, ARNewsline™)

HAM RADIO IN SPACE: BASS OFFICIALLY OFF OCTOBER ISS FLIGHT

It’s now official. The Russian Space Agency has notified NASA that 'N Sync singer Lance Bass, KG4UYY, won't fly to the international space station next month because his backers were unable to raise the $20 million fare.

With backing from corporate sponsors that included Radio Shack and MTV, Bass had hoped to blast off from the Bikenour Cosmodrome in Kazakhstan on October 28th. But the producer of a seven part documentary on Bass experience in space failed to raise the full amount of money needed. The result is that the pop star was grounded by the Russians and a cargo container substituted on the flight in his place.

Had he flown Bass who is age 23 would have been the youngest person and youngest ham radio operator ever in space. He also would have been the third paying space tourist to visit the I-S-S. We’ll have more ham radio space related news later in this weeks newscast. (ARNewsline™ from published reports)

**

ENFORCEMENT: DONT TAKE 10 ON THE ROAD AGAIN

The FCC has told Cheetah Transportation Company to keep its trucking operation off of the 10 meter Amateur band. In a letter to the Monroesville North Carolina company the FCC says a driver for a vehicle licensed to Cheetah was operating unlicensed radio transmitting equipment on 28.085 MHz. This, while driving on Interstate 77 in South Carolina last June 5th.

In its letter to the company the FCC tells Cheetah Transportation that this operation will subject the person operating the radio to fine or imprisonment if the violation continues. Fines normally range from $7500 to $10,000. (FCC)

**

ENFORCEMENT: FCC SAYS NYC REPEATER PROBLEM IS SOLVED

The FCC says that a repeater problem in the New York City area has been put to rest. This as the agency places primary responsibility for solving interference on the shoulders of the operator of an uncoordinated repeater. The agency’s Daryl Duckwoth, NNZ0W, explains:

--

Duckworth: “We closed the case involving a repeater operated by Ramon Floriman, KB2PRV, of Elmhurst New York. Florimam was unable to show coordination and the Enforcement Bureau pointed out that he would be primerilly responsible for resolving any interfertence to a coordinated repeater; that a Control Operator must be present during the operation of the station and that the repeater is to be used only by licensed operators.”

--

The FCC hopes that closes the book on this one. (RAIN, FCC)

**

HAM RADIO EDUCATION: THE BIG PROJECT WORKS

The ARRL Education and Technology Initiative, better known as "The Big Project," has been getting big donations. More important, its getting big results.

The Big Project was created by ARRL President Jim Haynie, W5JBP. League Vice President Kay Cragie, WT3P, made it all work. Its primary objective is the spreading of Amateur Radio into the nation's schools.

The Big Project support fund has already received $198,000 in donations from approximately 3,400 individual ARRL members. The average donation has been about $50. (ARRL Great Lakes Div. Release)

**

HAM RADIO TRAINING: HAMTESTONLINE.COM

J. Cunningham and Associates has launched a new subscription website for aspiring radio amateurs and those wanting to upgrade. Called www.hamtestonline.com, the company says that the site is designed to help both new and experienced ham radio enthusiasts prepare for U.S. amateur radio

written exams.
According to a press release, HamTestOnline operates entirely online. There is no software to download or install. One click records your answer, provides feedback, and presents the next question. The Website includes all questions from the latest Technician, General, and Amateur Extra question pools.
J. Cunningham & Assoc. is a small software development and consulting firm located on the outskirts of Boston, Massachusetts. They can be contacted by e-mail to webmaster @hamtestonline.com. (Hamtestonline)

**

BROADCAST COMMUNICATIONS TRAINING: SBE OFFERS CERTIFICATION

The Society of Broadcast Engineers - the SBE - is offering a program of certification for broadcast engineers. Certificates range from the entry-level Broadcast Technologist to the 20-plus-years-of-experience-needed Professional Broadcast Engineer. The program includes certification for Audio and Video Engineers. There is also a Broadcast Network Technologist which does not include any RF related questions. For more information about SBE Certification contact the SBE chapter nearest to you. (SBE PDX)

**

CELEBRATIONS: SCADS AT YEAR 29

The 29th Birthday Meeting of the Southern California Area D-X’ers is slated for September 21st at 12 noon. The venue is the Community Room of the F&M Bank in suburban city of Seal Beach. The meeting is open to the general public. Contact Bill Fisher by e-mail to billfishernow@netzero.net for more information on this special gathering. (SCADS)

**

SPECIAL EVENT STATIONS: GB2RAF ON THE AIR

And the permanent special event station GB2RAF located at the UK Royal Air Force Air Defense Radar Museum was to be operational on Saturday the 14th of September between 09:00 and 14:00 UTC in the 80 or 40 meter bands. QSL will be sent to all amateurs who make contact and request one. (GB2RS)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

EDUCATION: HOME SCHOOLING HAD HAM RADIO

In California where Amateur Radio Newsline is located, some 150,000 youngsters each year are getting their primary education at home. They are home schoolers. Their teachers are primarily their parents and similar percentages hold for most other states. And there’s a growing question: Has ham radio become a part of the home schooling movement? Bill Pasternak, WA6ITF, has more:

--

Rumors abound that ham radio has become an important addition to the nations home schooling movement but only those involved in home schooling can really tell us -- and you -- what’s happening. To try to find out, Amateur Radio Newsline is going to run one of our “mini surveys.”

To take part is simple. First you need to be a ham radio operator who is home schooling his or her children or a ham radio kid who is being home schooled. If you fit either category, take a moment to send us a note explaining how you are using ham radio in your home schooling curriculum and why you chose it.

Please send your electronic response to newsline@arnewsline.org and be sure to put the words home schooling in the subject line. We will collect the data for the next three weeks and then post some of it to our website. If we get enough input we may even try to write an article on ham radio and home schooling for one of the mainline Amateur Radio magazines -- if they are interested. Lets face it: This could make for a rather interesting project.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF

--

Again, if you are a home schooler who uses ham radio in the teaching process please send your e-mail response to newsline@arnewsline.org and be sure to put the words home schooling in the subject line. We thank you for taking part in this survey.

**

HAM RADIO IN SPACE: U-O-SAT 11 HEARD AGAIN

In the world of ham radio in space, word that U-O-SAT 11's V-H-F beacon has been heard once again. Paul Roeder, KK5ET in Houston reports via the AMSAT News Service that he copied the 2 Meter downlink on 145.826 MHz FM. This is a 1200-baud A-F-S-K signal and he heard it between 21:25 and 21:38 UTC pass on September 4th. Paul says that the signal was a strong S 3 to S 5. (ANS)

**

HAM RADIO IN SPACE: JAPAN TO DEVELOP SPACE SHUTTLE

Japan's space agency says that it plans to test an unmanned landing and take-off system next month. That nations National Space Development Agency, or NASDA, that it hopes will one day be used in a reusable shuttle or other spacecraft.

The five-part tests are to begin next month on Christmas Island in the Micronesian archipelago of Kiribati. They will be followed by a second set of tests sometime next year. (K6DUE, NASDA)

**

ON THE AIR: THE VHF/UHF FALL SPRINTS

The 2002 Fall Sprints, sponsored by the Southeastern VHF Society, are about to start up. According to Greg Robinson, KB4NVD , the Sprints are a fast paced block of time where all the contest activity is compressed into a short period. That says Robinson makes them a great chance to get on and work lots of stations on your favorite VHF and higher bands.

Robinson says that the bottom four bands all have their own separate evenings for the contest. The microwave bands from 902 MHz and up are grouped together on a weekend morning.

More information about the days of the Sprints , the rules and a list of who is handling the logs for each band will be found on the SVHFS webpage. Its in cyberspace at www.svhfs.org. (VHF Reflector)

**

DX

In D-X, word that G3PYB, G8ACE and G8BKE believe they have re-claimed the United Kingdom distance record for 76 gigahertz. Yes that’s 76 gigahertz -- as in way up there in frequency.

On Sunday September 1st, the trio made contact on 75,976.2MHz over a distance of 79.6 kilometres between Ventnor on the Isle of Wight and Highclere, near Newbury in Berkshire England. Further details are on the world wide web and there's a link from the RSGB site at www.rsgb.org. (RSGB)

And nearly at the other end of the spectrum, on August 30th at 05:50 UTC stations G3MLO, and MW0AQD, were in QSO and taking part in the British 'Fivemegs Experiment' on 5398.5kHz at 05:50 UTC. Afterwards, G3MLO received a reception report from ZL2JR, saying that their signals had been copied in New Zealand. MW0AQD was received at '4 and 4' while G3MLO was copied at '5 and 4'.

While the 'Fivemegs Experiment' is intended to investigate propagation within the U-K, the contact was made shortly after sunrise in Britain and around sunset in New Zealand. This is the time that long-distance 'greyline' propagation can be expected to occur (RSGB)

**

THAT FINAL ITEM: A NEW KIND OF BATTERY

And finally this week, a new battery about to be marketed for home video enthusiasts holds a promise in expanding ham radio emergency communications. It is called Instant Power and Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has more in our technology report:

--

One of the most frustrating experiences for a photographer or a ham radio operator is to be in an acute situation that requires equipment work properly and have the batteries powering the equipment go flat. For the photographer it usually means a lost photo opportunity. To the ham radio operator assigned to provide communications during an emergency it could be a life and death situation.

But power reliability could soon increase dramatically. Steve Crow, K4CPX, passes along word that the nations largest photographic retailer, Ritz Camera has announced plans to begin selling a new battery that can keep a camcorder or digital camera shooting away for half a day.

The new source of portable power is Electric Fuel Corp.'s Instant Power disposable batteries. Based upon Electric Fuel's zinc-air technology platform, the Instant Power camcorder battery connects to the camcorder through its DC jack and offers the user up to 10-hours of running time. Another model designed for digital still cameras offers upward of 12 hours of continuous operation time. As with the camcorder battery, the digital camera battery pack comes with a built-in belt clip and 3-foot cord. Both batteries have a five year shelf life in the original sealed aluminum pouch and come complete with a 3-foot cord and an integral belt clip.

While not directly designed for ham radio needs and not a renewable source, the new battery could augment the needs of ham radio operators in emergency communications situations. And here's where Amateur Radio ingenuity comes in. If models are available that can directly or through some home built regulator adapter be made to power a 5 watt hand-held radio, an Amateur working an emergency situation would have hours of power wll beyond that of his radios normal battery. And depending on how much he transmits, an Electric Fuel battery might run his H-T for several days before requiring replacement. This also gives the possibility of extended operations for low power Field Day stations, QRP treks and similar one-time operations. Best of all it is a date it, put it on the shelf and forget it power source, standing by for the next five years in case it is needed.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

Electric Fuel also manufacturers a smaller version of this battery technology for cellular phones and P-D-A's. You can find out more about this new power source and the technology behind it is on the web at www.electric-fuel.com. (K4CPX)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur

Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Norm Seeley, KI7UP, saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

One day a man, who had been stranded on a desert island for over ten years sees an unusual speck on the horizon. "It's certainly not a ship", he thinks to himself. As the speck gets closer and closer he begins to rule out the possibilities of a small boat, then even a raft.

Suddenly, emerging from the surf, comes a drop dead gorgeous blonde woman wearing a wet suit and scuba gear. She approaches the stunned guy and says to him, "Tell me, how long has it been since you've had a cigarette?" "Ten years," replies the stunned man. With that she reaches over and unzips a waterproof pocket on her left sleeve and pulls out a pack of fresh cigarettes. He takes one, lights it, takes a long drag and says, "Man, oh Man! Is that good!!"

"And how long has it been since you've had a sip of bourbon?" she asks him. Trembling the castaway replies, "Ten years." She reaches over, unzips her right sleeve, pulls out a flask and hands it to him. He opens the flask, takes a long swig and says "WOW, that's absolutely fantastic!"

At this point she starts slowly unzipping the long zipper that runs down the front of her wet suit, looks at the man seductively and asks, "And how long has it been since you've played around?" With tears in his eyes the guy falls to his knees and sobs, "Oh Sweet Jesus! Don't tell me you've got a ham radio in there too?"

This is a silly question, but do you have the right kind of mic? If it takes an electret and you have a dynamic, you may have a problem and visa versa. Just a guess as I don't have the rig or a schematic. Usually the specs are in the front or all the way in the back of the op manual. Gain may also be an issue as well as the silliest thing, wiring. Remember: it's the stupid little things that will get you. Complex things are a piece of cake. :-)

Happy Trails,

Steve WB4CZR

Hi, I am new to the list. I am Ed KD4CBD.

I have a question for the group. I have a DSS LNBF and I was wondering if it can be coverted for use in one of the Amateur microwave bands. Or is it only good for some quality MW parts.

73 Ed KD4CBD

Hello,
  I was playing with a APRS program I downloaded off the web and was wondering
what I need to make it work? I have a PK232 TNC and a VHF radio hooked. What
frequency do I tune too for listening? or transmit on? If you know anything
about APRS please email me with the information.

Thanks so much...

Oh, it's OK for you (Doug Adair N8WWM) to accuse Tim of being a drug dealer or Randy of being a drug addict,
but when I show just a small example of what "you"
were doing for months on this newsgroup, that's not ok.

yawwn, someone always wanting to bring a fight to rec.radio.scanner from
another newsgroup. guess this group has been quiet too long.

Hola:

Tengo el siguiente material para vender. Llamame al tel�fono 606359856 y convenimos un precio. Un saludo.

EQUIPOS
=========

- Emisora 27 MHz Super Jopix 2000 (con frecuenc�metro)

- Walkye Midland Alan Plus 95 con cargador y bater�a

- Emisora President Lincoln (decam�trica con 27MHz)

- Walkye 27 MHz AM COBRA con base magn�tica y antena telesc�pica

ACCESORIOS
===============

- Micro de base Sadelta Echo Master Plus Classic

- Medidor SWR y acoplador de base Zetagi HP-1000

- Preamplificador de recepcion Syncron HP 28S

- Amplificador lineal con previo de recepci�n Syncron B-300 PS

- Amplificador a v�lvulas Syncron AL-250 NLS

- Medidor SWR y acoplador de movil Euro CB TM100

- Fuente de alimentaci�n regulable RM 25V (20 a 25 amperios)

ANTENAS
==========

- Antena base 27 MHz Sirtel 5/8 8 radiales

- Antena base Sirtel 1/2 onda

- Antena m�vil Santiago 1200 5/8 onda

- Antena m�vil Tagra 5/8 onda

- Antena telesc�pica para walkye 27MHz

- Antena para VHF de base magn�tica

- 2 antenas rosaca mariposa para VHF (Radio Taxi)

OTROS
=========

- Manipulador de telegraf�a

- Bater�a seca 12V , 2�2 amperios

- Altavoz exterior 50 ohms

- Soporte para m�vil o walkye sobremesa

- 15 metros cable RG213

- 11 metros de cable paralelo

The only danger you pose is to your pekker from yankin it too hard while watching gay porn videos. What a laugh to even consider you as dangerous. Humorous, yes indeed, tho...

Well, 1st of all...I never said any such thing about dweebqueen. His own words convict him. 2nd, Chapwoman admitted his crack use. 3rd, I really don't care what you say. Prove it was me though. If you don't you will care what you SAID.

Post and accuse all you want. Just have some proof. So far I see none. Just like when you said N8 sells illegal equipment. It is expected though. You are a keyqueen, and keyqueens lie as a function of their lives.

Tell us about you and twithed and FUGGLY kid...twithed is being quiet about it.

Get busy, Markie Beckie...your Master commands.

Crt4239,
```

Please do pursue the matter! The 2 meter band is a prescious resource that
the people of the United States have allocated to the Amateur Radio Service
not to child molestors and other misfits.

In addition to the other good advice on this thread, you may want to contact
the ARRL Section Manager in your area, John Rodgers n3mse@arrl.org who may
be able to provide other recommendations and assistance.

Best regards,

Doug

Hi ,
Anybody have an idea about where I can download the user manual for
the Sony ICF-7600G ?

Thanks in advance
Vasu

Well, if you get into an accident, cops will ask you if cell-phones were a
factor. They are not going to ask if ham radio was a factor, primarily because
there are so many other distractions, but also because they use their two-way's
all the time. They are not as bad as cell-phnes, I can tell you from
experience! But they are still a distraction.

73's,
Mike

I was once browsing through the user's manual for a Motorola mobile radio once
and on the first page was a warning: "Do not operate this equipment while
vehicle is in motion." Kinda silly if you ask me. Ham radio really can be a
distraction, especially if using anything more than a 2m/70cm radio with the
local repeaters programmed in. Once you start doing SSB and have to tune in
stations, or if you're trying to find repeaters that you don't really know
about, it can really get fun. :)

I recently picked up a TS700SP in really nice shape, however the external VFO that I got with it doesn not work. There is nothing coming back from the VFO to show frequency on the TS700SP dial. The VFO looks like new. I'm wondering if there's anyone out there that has had experience with these, and might be able to point me in the right direction.

Organization: Cox Communications
Xref: archiver1.google.com alt.radio.family:7954 rec.radio.amateur:4175

I just purchased a pair of Morotola T5820 Talkabouts. My experience so far has been mixed. For comparison, my last radio was Motorola Talkabout T289.

In case you don't know (as it's not on Motorla's website yet) the T5820s offer 14 FRS channels and 8 GMRS channels, supposedly with 0.5 (FRS) and 1.0 watt (GMRS) power levels, and a vibrate mode.

Other functions are fairly standard for this level of radio: 38 privacy codes, scan mode, backlit LCD. Although bulkier than my T289, the overall length is the same. I was considering a T6400 or T7200.

Posivitve:

+ I like the analog volume knob. On my T289 it was a pain to adjust the volume level. The T6400 has been docked by reviewers because it has digital volume controls only.
+ Good price ($99/pair, although the T6400 has the same price with mail-in rebate)
+ Construction seems fairly sturdy.
+ Interface is straightforward.
+ Speaker volume is loud (too loud?)
+ The T7200 is huge by comparison.
+ Vibrate mode may be useful.

Negative:

- No weather channels.

- The LED is supposed to blink 2x/sec if the channel is busy. This seemed to only work sporadically.

- The lowest volume level is still quite loud (in a quiet room it wouldn't be usable in polite company).

- A recent in-city test gave about 0.6 miles on channel 8 (FRS) and about 1.0 miles on channel 7 (GMRS)
  One radio was standing on the hilltop, the other was driving in a car. There were some low (1-2 story) buildings in the sightline, but much less than if both radios had been at ground level.
  There was a noticeable improvement when we switched from channel 8 to 7, but the claims of "2 mile" and "5 mile" range seem hopelessly optimistic. I'd say a more realistic rating would be "0.5 mile" and "1 mile" for FRS/GMRS. (Unless one radio being in a car would severely compromise the range...I didn't test that possibility).

- I put a set of freshly recharded AA NIMH rechargeables in both radios. One radio showed 3 bars of charge, the other showed 2 bars. There doesn't appear to be a setting to reflect battery type.

- Scan mode is not fast (About 2.5 seconds to cover 22 channels)
  I put one radio in scan and transmitted
  on the other radio, and with short transmissions the other
  radio often failed to pick up the transmission. Also,
  scan appears to only search for code 0 OR code X.
  You can't scan for all codes at once.

andy
the police have to be real careful in throwing stones like that have you seen the inside of a modern police car they have several radios a computer and video camera and god knows what else
so they cant say to much about us running a couple of radios in our cars

The companies have to try and cover all the bases when it comes to anyting that can cause an accident. Do you remember the woman that dropped coffey on her lap in the car and got burned because it was hot ?

I have to sit in several half day classes every year at work on safety just because of things like this.

I was in one meeting being held by a company that makes big motor starter equipment. One of the selling points was that if a breaker cubical went bad it could be swapped out with out taking the power off all the others. Then in the book there is a great big warning about not doing that. It is normally safe enough but when dealing with 480 volts at 1000 amps they have to cover the bases. They tell you how to do it but if you do they are not responsiable for what hapens.

>

Hello,

I just bought this radio at a hamfest the other day. I have read varying opinions on the net about it. However, for the money, it seems like a decent 2m/440 radio.

Anyways, my question is this. While on the AIR band in AM mode, why does it seem that you can't fully disengage the squelch??? On FM, you can turn the squelch all the way down and get white noise. However, in AM, it seems to always be there (no turning it down or off to get white noise and static). Futhermore, the display shows the message "Busy" and you can see some meter activity, but no breakthru YET you can get hear just fine those signals that go beyond a certain signal strength.

Am I missing something here? Do I have a problem with the radio? Is there some other parameter or mod to address this?

Thanks very much.

Mark

>
> Anyways, my question is this. While on the AIR band in AM mode, why does it seem that you can't fully disengage the squelch??? On FM, you can turn the squelch all the way down and get white noise. However, in AM, it seems to always be there (no turning it down or off to get white noise and static). Futhermore, the display shows the message "Busy" and you can see some meter activity, but no breakthru YET you can get hear just fine those signals that go beyond a certain signal strength.
>

I have a pair of 207's and both perform exactly like yours. I also have a pair of T7's which do the same. And two different HF xcvrs which do the same thing when I switch from AM to FM. The white noise with the squelch open on FM is MUCH louder than on AM.

While writing this I decided to try a scanner, and changing modes on my Radio Shack scanner causes exactly the same effect.

Unless I am missing something I think your rig is performing just fine.

I find that I have to listen carefully to hear the noise if I turn the squelch down, a better clue is that the "Busy" indicator comes on when the squelch is open.

Sorry to use this group but I haven't found a better group.
Two weeks ago I found a Dishnet satellite TV receiver and antenna at a garage
sale. It's brand new. I checked the az and el to Dishnet's 110W and 119W
satellites and it looks as if I can see them so I installed the antenna today.
I'd appreciate hearing from someone who knows how this system works. I have
the manuals and plan to activate it about 1 October. The manual mentions
another satellite at 67 or 68W. I wonder if that satellite is still used.

For general DBS TV there are 6 positions for the satellites between the DBS providers. These are 61.5, 101 110 119 129 and 148.

Currently Dish uses 110 and 119 for their Americas Top 200, America's Top 150, and smaller programming packages. This sat dish they use is a parabolic (DISH 500) to pick up both 110 and 119 at the same time. They use the 61.5, 129, and 148 birds for HDTV, international, and local channels, but they need a seperate dishes.

Amateur Radio Newsline™ Report 1307 - August 30th, 2002

Amateur Radio Newsline report number 1307 with a release date of Friday, August 30th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio assists at a world development summit in Africa and hams in Michigan aid in the search for two missing girls. These stories are first on Amateur Radio Newsline report number 1307 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN ACTION: SUMMIT IN SOUTH AFRICA

Ham radio has played a vital role in a World Summit for Sustainable Development held in South Africa. It began on Monday August 26th. Just before the opening gavel fell Hans van de Groenendaal, ZS6AKV, filed this report from Johannesburg:

--

"Radio amateurs will be providing communications assistance at three main operational centers. Members of the South African Radio League's emergency communications arm Hamnet will set up facilities alongside the National Defense Force and the South African Police Services. They will be operating at the main convention center, at Campton Park near Johannesburg International Airport and in Pretoria near the Woodcliff airbase.

Radio amateurs will be using the extensive repeater network in the city as well as H.F.. ZS6BUU, the National Director for the South Africa Radio League's Hamnet has more details:

--

ZS6BUU: "There will also be at least two mobile stations fully equipped to be available should the necessity arise. More vehicles can be called upon if needed.

One vehicle will be on stand-by should we need communications from Lancerial Airport. Now, Lancerial is an alternative airport should Woodcliff Airbase become clogged up with aircraft coming in from al over the world.

Hamnet is required to render emergency communications in association with the SANDF -- that's the defense force as well as our local police. Hamnet regards this as a good exercise to test our preparedness and how we will be able to handle any emergency -- if and when one should come up."

--

It goes without saying that many other radio amateurs will be available should the need arise.

I'm Hans van de Groenendaal, ZS6AKV, reporting from Johannesburg.

--

The 10-day summit is being billed as the largest in U.N. history. It has been nicknamed Rio+10 because it marks the 10th anniversary of the landmark 1992 Earth Summit in Rio de Janeiro.

**

RESCUE RADIO: MICHIGAN HAMS HUNT FOR MISSING KIDS

They did not plan to get involved but a group of Michigan hams swung into action after a policeman in the town of Grand Haven knocked on the door of Andrew Young, N8ARY. The officer was going door to door looking for two missing area youngsters. On learning of the situation, Young decided to see what he could do to help:

--
Young: "I called a friend of mine who is also an Amateur Radio person because he had a park across from his house where kids generally play. I asked him to keep an eye open for the two children. A few minutes later he called someone else on the repeater and asked them to do the same thing and a few guys heard it and just kind of assembled as a loose knit net."
--

The person that Young called was Donald Smith, N8HCS, also of Grand Haven. He enlisted Smith to keep his eyes open for the two young girls. N8HCS assisted by David Cross, N3WJF, then called up an informal net that grew in size to about a dozen area hams. Most of the action was in the search:

--
Young: "We sort of just stayed out on the street and interacted with people and reported anything we heard back to the net control."
--

As the informal net grew into a formal operation, John Sundstrom, N8YQD was dispatched to be at the girls parents home. His job was to maintain contact after the net turned into a formal search. Coordination and central dispatch where in the hands of Don Meyer, KB8ODB.

The good news came when the girls were located by the police about two hours after the start of the net. This, thanks to a report from a neighbor who saw the girls and called in.

Young says that with all of the recent abductions in the news, it is nice to see a community mobilize like this to find the missing children. Even better: In this case the search was a complete success. (ARNewsline™)

**

EMERGENCY COMMS: GRANT AIDED ARRL TRAINING TO BEGIN

Word from the American Radio Relay League, that its Amateur Radio Emergency Communications Training Courses supported by a $181,900 federal Homeland Security grant will begin within a few weeks. As previously reported from an ARRL bulletin the League was among several dozen nonprofit organizations designated to receive some $10.3 million in federal money to boost homeland defense volunteer programs. During its first year, the grant will reimburse the cost of Level I ARRL Amateur Radio Emergency Communications Course training for up to 1700 volunteers. More information is on the web at www.arrl.org. (ARRL)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Amateur Radio Club of El Cajon in El Cajon California.

(5 sec pause here)

**

RADIO RULES: VANITY FEE GOES UP SEPTEMBER 9TH

A new and slightly higher fee for vanity call sign applications will go into effect on September 9th. According to the FCC, applications received on or after that date will be subject to a $14.50 fee for a full ten year license term. (FCC, RAIN)

**

ENFORCEMENT: FCC WEIGHS INTO REPEATER FRAY

The FCC is weighing in on an ongoing repeater versus repeater dispute in Arkansas. The Agency's Daryl Duckworth, NN0W, explains:

--
Duckworth: "We requested further information from Gerald Hogue, KD5CYA, of Conway Arkansas regarding continuing interference between his repeater and the AC5RU repeater. We had notified both parties some time sago that each was responsible for taking steps to minimize interference, but we are seeing no cooperation on the part of the KD5CYA repeater. Hogue has 20 days to respond."
--

But the problem seems to have gone past the repeater versus repeater stage. Now users are getting involved and the FCC is taking action there as well. Again, the FCC's Daryl Duckworth:

--
Duckworth: "On the same topic, the Enforcement Bureau has warned Ronald Lewis of Morrilton Arkansas, KC5BNN, about interference to users of the AC5RU repeater. I was pointed out Lewis that his license renewal comes up in June 2003 and that this matter must be resolved if he is to receive a routine renewal."
--

In its letter to Lewis the FCC said that it will not tolerate deliberate interference between the two repeaters. Also that it does not care if the interference is from a transmission by one of the repeaters or by a user of one of the repeaters making a broadcast intended to degrade the other repeater. Either way, it must stop. (FCC, RAIN)

**

ENFORCEMENT: MORE TROUBLES FOR FAX.COM

More problems for fax.com - the direct fax advertising company recently hit with a 5 point 4 million dollar fine by the FCC. Now a California businessman says that he wants a lot more from the firm in punitive damages for being spammed.

Steve Kirsch, a Silicon Valley executive is suing fax.com for two-point-two trillion dollars. Yes we said trillion with a capitol T. And Kirsch says that he has filed the litigation because he believes that to be the amount consumers should get if the proper penalty is assessed for each and every junk fax ever sent by fax.com, plus triple damages as permitted under federal law.

Kirsch is founder and chief executive of Propel Software in San Jose. He decided to pursue the class action suit after he got a torrent of unsolicited faxed ads. Kirsch estimates an unwanted fax wastes ten cents for the cost of paper, ink and fax machine wear and tear. (Published news reports)

**

NAMES IN THE NEWS: BASS WILL FLY IN OCTOBER

According to the latest news reports, Lance Bass of the boy band 'N Sync will fly to the International Space Station in October. Hollywood producer David Krieff, who has arranged financial backing for the performer's space venture, says that Russian space agency executives and attorneys recently flew to Los Angeles and spent eight days hammering out a 400-page flight agreement with Bass' representatives. Krieff said Bass is slated to blast off October 28th from the Baikonur Cosmodrome in Kazakhstan with two cosmonauts on an eight-day Soyuz "taxi" and resupply mission to the space station. Krieff also disputed remarks attributed to a Rosaviakosmos spokesman Sergei Gorbunov that the Russian space agency might scrub Bass from the mission because he had failed to meet a payment deadline.

Bass hopes to follow in the footsteps of the world's first two space tourists -- American businessman Dennis Tito and South African millionaire Mark Shuttleworth. There is still no word as to whether or not Bass might operate the ham station on board the I-S-S, but the entertainer was scheduled to talk with school children from the Johnson Space Center in Houston on August 29th over the Internet. This, using NASA's Distance Learning Outpost and Education Web Portal. (Published news reports, NASA release)

**

NAMES IN THE NEWS: FORMER HAM TO HOST REVIVAL OF TV GAME SHOW

Donny Osmond, the former KA7EVD, will be helping to bring a legendary television game show back to the small screen. USA Today reports that starting in September, Osmond will be the host of Pyramid, a syndicated revival of the game shows created and hosted by Dick Clark in the 1970s and '80s.

According to Los Angeles ham radio lore, Osmond was reportedly mentored into ham radio in the early 1980's by the late Art Gentry, W6MEP. This, when Osmond and his sister were taping the Donnie and Marie Show at the Golden West Studios in Hollywood. Gentry, who was employed there as a Broadcast Engineer is best known for his development of the FM repeater - a device that changed the way most hams operate on the VHF and UHF Amateur Service bands. He and his wife Millie, K6JJN, were also mentors to many Los Angeles youngsters wanting to enter ham radio. (USA Today, ARNewsline™)

**

NAMES IN THE NEWS: DARA NAMES SCHOLARSHIP WINNERS

Gary Des Combes, N8EMO Chairman of the Dayton Amateur Radio Association Scholarship Committee has announced the recipients of the clubs 2002 scholarship program. Named to receive financial support for their future education are Thomas Tenaglia, K3TAT; William Bailey, KF4VAU; Victoria Morgan, KF4PNI; Nicholas Bishop, KG6JSA; Jeanne Hansen, KB2RAP; Sara Hanna, KE6MWX; Jeffrey Doub, KC8IOC; Michael J. Haessler, KB9TGF and Amy Morris, KI6F. Scholarship awards run between $1000 and $2000. (DARA)

**

HAM RADIO BUSINESS: NEW LINK-COMM SOFTWARE ENHANCES REPEATER CONTROLLERS

Attention repeater owners. If your system uses a Link-Comm controller, have we got good news for you.

Steve Srobel of Link Communications has announced that new programming software for the RLC-1 Plus, RLC-2, RLC-3, RLC-4, and RLC-Club is now available. The new software allows you to program messages, timers, autodial numbers, etc. with a point-and-click interface. It also provides a way to manually edit and upload a file of other advanced commands.

The best part is that it can be downloaded for free from www.linkcomm.com/quickstart.html. You can email feedback about the program to mark@l... (Repeater Owners Remailer)

**

HAM RADIO BUSINESS: COMMEMORATIVE PIN FROM KENWOOD

Kenwood Communications is offering a commemorative "United We Stand" pin with the purchase of any new Kenwood Amateur radio. The offer is good in the United States only and began on August 20th. It runs till further notice. More information as on the web at www.kenwood.net/ama_page.cfm (Kenwood Communications)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

CONVENTIONS: CB'ERS TO MEET DOWN-UNDER

Are you into C-B radio? Do you like to travel? Would you like to go to a week long C-B Break? Well here's a convention for you.

Q-News reports that the Albatros C-B Radio Club will be holding its annual convention the week of September 14th to the 21st. That's right it is a week long C-B show with all the trimmings. New gear. lectures and what have you.

It all takes place in the city of Ballina. That's down-under -- in Australia. (Q-News)

**

HAMFESTS: LIMARC IN NEW YORK SEPTEMBER 15TH

Closer to home, LIMARC, the Long Island Mobile Amateur Radio Club will be holding its fall hamfest on Sunday, September 15th. The venue is Briarcliffe College in Bethpage, New York. Gates open at 6:30 AM for vendors and for the general public at 8:30 AM Eastern time. More information is in cyberspace at www.limarc.org or call the 24-hour info line at 516-520-9311. (LIMARC)

**

HAMFESTS AND CONVENTIONS: NRC TO WEBCAST

The National Radio Club will hold its annual convention the Saturday and Sunday prior to Labor Day. N-R-C is a group made up of Medium Wave D-X radio listeners with the club founded back in 1933. And in past years the club has set up a carrier current radio station in the hotel where its conventions are held. Normally you cannot hear the broadcast outside the hotel grounds, but this year could be different. This is because the carrier current station will be helped by a broadcast remote pick-up channel that will be used to send the audio across town to a server that will distribute it as a webcast. The frequency to be used belongs to WLIO television in Lima Ohio. Fred Vobbe, W8HDU, explains what will happen.

--

W8HDU: "At the hotel we're going to place a small walkman radio connected to an old remote pickup unit. The transmitter is on 26.410 in narrowband FM, and it will relay back to WLIO's studios where the club will have its server encoding the data stream. The transmitter runs about 40 watts into a CB type antenna, and it IDs every 10 minutes with the call WPLP549. The ID won't be heard on the webcast as it's filtered out at the receiver."

--

If you hear this broadcast, you can get a QSL by sending an accurate report to Fred Vobbe, W8HDU, in care of WLIO Television, 1424 Rice Avenue, Lima Ohio 45805. (NRC, W8HDU)

**

INTERNATIONAL-AUSTRALIA: VANDALISM AND BULLETS ON THE AM BAND

On the international scene, the staff of Brisbane Australia commercial AM station 4BH are in shock after what appears to have been a deliberate attack on the radio station's twin broadcasting towers. Q-News Graham Kemp, VK4BB, has the details:

--

4BH broadcasts on 882 kHz and although now a DMG music station is probably better known from it's "glory days" as the Queensland Key Station of the Macquarie Broadcasting Network.

Police are investigating an incident just before 9 o'clock Monday

August 19 which saw both broadcasting towers have their guys cut with what appears to have been bolt cutters, which sent them crashing to the ground, putting the radio station off air, and coming to rest just meters away from a caravan park.

The broadcast industry in Brisbane rallied around, SWITCH AM a public community access station at Long Pocket on 1053 kHz has gone "off air", donating their transmission facility to the Commercial station. 4BH was back on air just 27 hrs later at just some 800 watts, instead of their 5kW, using a retuned 1053 TX and tower, retuned thanks to Radio TAB engineering staff winding some 11 heavy duty inductors.

This incident is unprecedented and has ramifications for all commercial radio broadcasters and the Commercial Broadcasters Industry Association has said "While it is hoped that this situation will not occur again it may be advisable for stations to review, and where necessary, upgrade security arrangements at their transmission facilities".

This is the same site which saw thieves using bolt cutters gain entry to steal some 2 dozen satellite dishes belonging to Radio TAB early in the year. Allegedly the 4BH studios in suburban Stones Corner were fired upon recently, at least one bullet penetrating an office.

From Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

Investigators have not been disclosed whether the three incidents are related. (Q-News)

**

SPECIAL EVENT: DRAKE ON THE LAKE

Back on this side of the Pacific, Greg Compton, N5ZFW, reports over the Internet that the Cherokee County, Texas Amateur Radio Club will be operating special event station called "Drakes On the Lake." This taking place the weekend on September 14th and Sunday the 15th.

The station, using all vintage R.L. Drake gear will be operated on the shore of Lake Jacksonville, which is near Jacksonville, Texas on 20, 40 and 80 meters. Callsigns to be used are AD5KM or KI5P. QSL with a 9 by 12 SASE to Brad Low, AD5KM, 840 Henderson Street Jacksonville, Texas, 75766. (From Internet posting)

**

DX

In D-X, members of the 8Q7ZZ youngsters' DXpedition to the Maldives have returned home after a highly successful operation. Mark Haynes, M0DXR, reports that the group made over 25,000 QSOs between the 30th of July and 10th of August, including around 330 on 6 meters. The QSL manager for 8Q7ZZ is Phil Whitchurch, G3SWH. (GB2RS)

**

THAT FINAL ITEM: CELL PHONE RELIABILITY

And finally this week, a graphic example of how the cellular telephone network can hiccup at the most inopportune time. Earlier in this newscast, we talked to Andrew Young, N8ARY, up in Grand Haven Michigan. Andrew was using a cellular phone. One of the topics that he and our Producer Bill Pasternak, WA6ITF, were discussing was the reliability of these devices. Guess what happened next:

--
Pasternak: "It seems to me that more and more hams are carrying cellphones than HT's. Have you noticed that also?

Young: "Yes. Myself, I have a cellphone that rarely works when there is a busy time -- like during some sort of event. When a lot of people get in one area mu cellphone almost never works and usually I have t...."

Phone line sound: "click. click."

Pasternak. Hello.... Hello.... I think your cellphone stopped working."
--

Talk about a graphic example happening at the most convenient time. Thats right. The cellular phone system up in Michigan did what so many seem to do. It abruptly went away.

Ham radio is always there when you need it. Another good reason to always carry your H-T when you are out and about. (ARNewsline™)

I have a OptElectronics FC-50 counter that has 7 of 8 bad ones

This counter'd be a $11 hamfest treat as-is.

Does anyone have a bag or these diaplays that'd part with a half-handfull for a couple of bux & postage?

Thanks

Marty

If I was trying to fix this, assuming this is just a 7-segment readout and not one of those readouts with decoder+latch+counter, would be to find out what it is. Find out the size, whether it's common cathode or common anode, what side the decimal point is on, and perhaps even current consumption. Find the data sheet, and you'll get this information.

Then, find some available readout that matches the necessary requirements,
and buy those. Buy a full set, and replace them all, to avoid
differences between types.

I just checked my ECG replacement guide, and it wasn't listed
in there. That would have made it really easy to check.

It seems a tad odd that 7 out of 8 have gone bad. If the one
that still works is the right most readout (ie the least significant
digit), you might look elsewhere assuming you have verified bad
readouts. The circuit might have blanking on unused readouts,
and the LSD is on simply to show that things are working; when you
apply a signal, the needed digits will light up. Or, the circuit
may multiplex, and the portion that does the multiplexing isn't
working properly.

An excellent first rig is the Kenwood TS-520. I still have one as a backup. Full power rating is 100 watts, but you can always step that down. Supports CW and SSB operation on 80, 40, 20, 15 and 10 meters. All solid state except the final amplifier stage, which uses a tube.

You can usually find these for around $250 in good condition. Check eBay and the rec.radio.swap newsgroup.

Probably from a lack of proper Elmer-ing, or too much exposure to CB....

Rumor has it that prolonged exposure to RF energy in the 11-meter range
causes severe brain damage.... ;-)

What probably happened was that someone just uploaded their logbook in ADIF format to the eQSL server. I do that on a routine basis. The system then cross-checks with other eQSL users and when a match comes up it automatically "sends" an eQSL.

Hi,

Some weeks ago I found on Internet, may be trough the QRZ links but I can nomore find it, a provider of badges.

This company sold metallic badges (oval, about 8cm x 5cm or so) made probably by electrolyse displaying your callsign, a date plus some text. The badge looks like the one of the police and can be attached in a wallet or on any other support to be displayed on your desk for example.

Does someone know the URL of this manufacturer, in USA I think.

Thanks

Thierry

Hi,

I have a problem. I'd like to connect my Kenwood TH-F6A HT to my computer's Line In so that I may decode some signals I receive. I went to Radio Shack, and bought a regular Audio Cable and Connected it to the Radio, and my computer. But for some reason the Radio starts to act weird, it will switch

VFOs, it will change Frequencies. Also it produces alot of noise on the Input. When I unplug it the radio is quiet, but when I plug the cable back in, it's loud and lots of interference.

I realize that the interference is coming from the Computer. But is there a quick fix for this? Or is there a commercial product i can purchase that will easily allow me to connect my radio to my computer?

Thank you very much,
Felix

Don't do that! A straight cable is not going to work - two different electrical interfaces despite having the same mechanical interface. Look at your owner's manual, there is a diagram of the pinouts (guess you've looked

at that) note the ":Level Convertor" in the schematic. You need RS-232 on
the PC side and TTL on the radio side, thus the level convertor. Search the
web, they (convertors) are out there.

But all i want to do is just get the audio to the line in on my computer why
do i need to connect it to the serial port on my computer?

Thanks,
Felix

Oh, interpreted it as the usual PC-to-radio connection for programming the
memory, etc. D'oh.

In that case, I'd slap some ferrite cores on the cable.

Hello Everyone,

I would like to let you all know that there is a new website that caters to Amateur Radio Items wanted and forsale.

At this time, it is for items located within the Ottawa, Ontario Canada region. However if it is successfull, it may be opened up for items across Canada.

Special thanks goes to http://Auction-Ottawa.Com for their services and helping out our Amateur Radio Community by providing this new & FREE service.

If you are looking for various Amateur Radio related equipment, feel free to visit this new site.

http://www.auction-ottawa.com/cgi-bin/ham_radio/suite/classifieds/classifieds.cgi

Enjoy!

James

I am looking for some help on indtalling my rohn 50' tower.

PROBLEM IS THE BUILDING INSPECTOR

He wants a current engineer stamp on a print rohn is 1988 and they said it has not change but he wants a current stamp.

Without sending a lots of $$$$$$$$$$$
I am just trying to get my ares/races sykwarn station back on the air

help

bob

well i dont think your going to do it cheap
what the inspector wants in the installtion engineered you will need to find a
structural engineer so him the plans and he will stamp them as being up to code
what you might try doing is calling the local EOC or the county and see if they
have an engineer on staff who might do it probono since its for ares/racees and
emergancy communications
if not its going to cost you around $500
i think if you go to rohns website you can get the details on the tower base and
such but with out the stamp the inspector wont pass ya and since you already asked
about it your screwed if you would have just put it up its easier to beg for
forgiveness than it is to fight city hall
good luck

Enjoy Randy! I liked how it "consumed" me, I
post twice a day, when George Busch WA3MOJ is
on here all during the day, posting on average 200+ times in a
month........ROTFLMAO!............what a troll George is. All the harassing,
sexual innuendo, racist, accusatory style posts made towards practically
everyone here.
He's an extra class ham operator that talks like this here,
because he can't on the ham bands and in person, the true
epitome of a troll, why else would he have some 250+
screen nics and change it on average every 6 days.
So please George, spew your normal foul language
and have fun troll........................

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

I wonder how many actually apply for a building permit and deal with a
building inspector when putting up a tower?? I never have.

Thanks all but so far it's all still laying on the ground.

I think what it is he wants to cover his butt

What is the differnce 1988 or 2002?

Rohn should be able to provide you with a copy with a current stamp.
It'll cost you a few dollars, but should be considerably cheaper than
having a local engineer do it.

You might want to look at radio shack HTX10 for 10 meters. It was my
first radio and still my favorite on 10 meters . RS has come out with a
improved and up dated HTX 100 for 10 meters. I have both RS models and
enjoy their simplicity. More time talking and less time trying to
figure out how the radio works.

Local building codes change. I used to wire houses, so I'm quite
familiar with changing building codes.

i think you guys are miss reading this or i am
the building inspector wants a engeneered plan before he will approve the
install this plan has to detail how this tower will be installed on this
site and you cant get that from Rohn
a state engineer in his state will have to draw that up and place his
stamp on the plans before the inspector will pass it thru
would have been a lot easier to have not asking the inspector in the
first place and just put it up according to rohns directions and be done
with it and no one would have said a thing but now since he brought it

up to the inspector he is screwed into having to get the engineers
stamped plans

Paul What happen was i moved to a new home and the city makes you get a permit
to install a tower for ham radio.

I went to them and asked for a permit but the person said i don't know much
about.

He than ask be to get a drawing of what i wanted to do.

I did and gave him a pier drawing 4' deep with 6" of gravel base for drainage
and cement 4' deep 24" wide.
But he looked at the print and than said i need to get a strcture engieer to
look it over and put then stamp on it.

This is nonecents there mixed up with all the celluar towers.

I might go the there engineers of the mayor's office next

All for a 40' tower to get back onnthe air for ares/races and skywarn.

maybe i migh have to get a corp grant for $500.00

bob

> Lou
> KB6FFT

I've had an HTX-100 myself and it was a fine rig. Several years ago, a friend of mine from work and I used to yak on 10m on the way to work. We also chatted with other operators on the band, even had a roundtable with a gent in Russia on the way in to the office. Definitely put me in a pleasant frame of mind for the rest of the morning! ;-)

The problem, though, is that the current sunspot cycle is on the downward side, and as it drops the 10m band will start to fade out in terms of good propagation. If you're going to only get a single-band HF radio, that's probably a good choice, BUT a better choice would be a rig that offers full HF coverage on all of the bands, not just 10m.

The low bands (below 30 mhz) are good for long range chats. To meet the local hams and to find out what is going on locally you can get on the 2M/440 repeaters.

There is jsut too much to do in ham radio to give a good answer as what to recommend. Do yo like to just talk , expirement , get into local or othe

activities ?   What do you like to do ?   For the equipment, how much money do you plan on putting into the hobby for the initial investment and how much for each year for the next several years ?
Just as most any hobby you can spend a little or a lot and either have the same ammount of fun.   Just like fishing, some have to have a big boat and truck to pull it with and lots of high dollar equipment or some will have just a flyrod (I admit they can cost a bunch) and a pair of waders and have just as much fun.

Hi Steve
Sounds like the wrong jumper
http://www.geocities.com/kb8qfl/htx242.htm
Shows
One jumper as 144 - 146 European band, (what you have ?)
One jumper 136 - 174 US emergency services
Both jumpers untouched as 144 - 148
Both cut radio does not work
These mods appear to be different from the one at mods.dk.

I work with a local (Canadian) Saint John Ambulance division, which (among other things) provides volunteer first aid services to local public events. Some of these events (e.g. "walkathon" fund-raisers) also rely on the local amateur radio club for communications.

We have our own commercial frequency and transceivers (both mobile and hand-held) which operate in the 160 MHz range, well outside of ham frequencies. Currently, I'm the only member (out of 5 divisions) who has a ham license; I've tried to generate interest among the other members but have had very limited success, and it does not appear as though we'll have enough of a response for the local ARA to run a course, at least not this year.

However, most 2m rigs will be able to receive on our commercial frequency. If we were to purchase a 2m rig for our use, we could use that to monitor the ham frequency in use for the event, even though they're not licensed to transmit; is that correct?

Picture the following scenario: We are monitoring the ham frequency for the event when an injury occurs. The ham operator on scene reports the incident and the location; then switches to our commercial frequency (or has a second rig tuned to listen on our frequency).

We transmit on our (commercial) frequency and listen on the amateur frequency. The ham operator transmits on the amateur frequency and listens on our commercial frequency.

It's kludgy; but is it legal? I can't think of any regulations we'd be violating. (And it might generate some interest in our members to sign up for a ham radio course, too ;-)

Dunno about Canada, but in the US it's illegal to utilize Amateur
radio frequencies to communicate with unlicensed operators.

You wouldn't know specifically what regulation would be invoked here, by
any chance?

--
In accordance with a first aspect of the present invention, there is provided a transportation facilitation device including a circular rim, a bearing in which a hollow cylindrical member is rotatable about a rod situated within the hollow cylindrical member, and a series of connecting members connecting the circular rim with the hollow cylindrical member to maintain the circular rim and the hollow cylindrical member in substantially fixed relation, wherein the rod is positioned on an axis perpendicular to the plane of the circular rim, and substantially central of the circular rim.

Abstract from John Keogh's successful 2001 application for an Australian patent (Innovation Patent #2001100012) for the "Circular transportation facilitation device" (aka "wheel").

As a former member of the BC Provincial Emergency Program, Deputy Communications Chief and a Ham I know the dilemma. Do any of your people have the Restricted Radio Operators License? It is a quick one day class that can get the interest going. Some hams are qualified to teach. The license is good for life and is one that everyone that uses a radio should have. I am off topic a bit but it is a suggestion. The other thing is to have the Licensed Ham having both radios and relaying. This can keep the confusion down but you must remember that in the case of an emergency you can use any means to communicate and that includes non-licensed operators. After listening to the Vancouver fireworks last Saturday I can tell you the Hams tend to give too much useless detail in the case of these events. A scanner in your communications center tuned to the ham frequency would also help. Most ham 2 meter radios will tune up to 160 MHz but do you want the Hams on your frequency? It is best to keep the communications apart and relay from a central dispatch. Too much help can cause confusion. I hope I helped

That is absolutely not true.

The most obvious example of this is the ARRL's Morse code practice
transmissions. You'll have a tough time convincing me that the 5 WPM
session in the pre-No Code days wasn't directed to unlicensed people.

As another example, there is the annual MARS event. Hams talk to MARS
stations. The hams transmit on Amateur frequencies, and the MARS people
talk on MARS frequencies.

It's the *retransmission* of non-Amateur services (such as NOAA Weather
Radio) on the ham bands that's illegal. (The sole exception is audio from
NASA's space missions.)

As previously announced I plan to be operational from Dassen Island Lighthouse (IOTA AF-064, ARLHS SAF-042, WLA LH-0423) from 1600 UTC on Friday 16 August until 1200 UTC on Sunday 18 August for International Lighthouse and Lightship Weekend 2002. This message is the final announcement and includes the latest weather and operating information.

WORLD LIGHTHOUSE AWARD

The World Lighthouse Award has issued the number LH-0423 for Dassen Island lighthouse. This will be its first activation for the WLA. My thanks to Don W9DC for facilitating this. My QSL card will include the WLA number as well as ARLHS and IOTA information.

WEATHER

I have discussed the latest weather forecast with the skipper of the boat which will be taking me to the island. Although it is somewhat windier than hoped it is still likely that we will be able to make the trip on Friday afternoon and be operational by 1600 UTC on 16 August as planned. If the weather does not play ball on Friday then I will go on Saturday morning instead, in which case I should be operational by 0800 UTC on 17 August. I plan to operate until 1200 UTC on Sunday 18 August; however it is possible that the weather will keep me on the island longer than expected in which case I will remain operational until I am able to leave the island.

OPERATING SCHEDULE

I have updated my operating schedule to take into account the latest solar flux index forecasts for the weekend, which are substantially better than the forecasts I used previously. My planned schedule is as follows (all times UTC):

```
0500-0600  7026 CW
0600-0800 14026 CW
```

0800-0900 No operation
0900-1000 14026 CW
1000-1100 14226 USB (primarily for ZS lighthouses)
1100-1200 No operation
1200-1500 21026 CW
1500-1600 14026 CW
1600-1900 21026 CW
1900-2100 14026 CW
2100-2200 7026 CW

This schedule will be repeated on all days for which I am operational. Please see it as a guide only as my operating times and frequencies will take into account actual propagation conditions and I will take breaks to walk on the island etc.

Further information, including propagation forecasts, can be found at http://www.qsl.net/zs1an/dassen.html

QSL INFORMATION

Please QSL direct to

PO Box 350
Newlands 7725
South Africa

Please include a green stamp or IRC if you would like a direct reply; all others will be sent via the bureau.

If you are a FISTS member and your QSL card (with your FISTS membership number) reaches me before the end of September then I will QSL via the FISTS bureau at no charge. I intend to send a single parcel of cards to the FISTS bureau in early October. My FISTS number is 8921.

Come on get it right.

Part 97.113

e) No station shall retransmit programs or signals emanating from any type of radio station other than an amateur station, except propagation and weather forecast information intended for use by the general public and originated from United States Government stations and communications, including incidental music, originating on United States Government frequencies between a space shuttle and its associated Earth stations. Prior approval for shuttle retransmissions must be obtained from the National Aeronautics and Space Administration. Such retransmissions must be for the exclusive use of amateur operators. Propagation, weather forecasts, and shuttle retransmissions may not be conducted on a regular basis, but only occasionally, as an incident of normal amateur radio communications.

This speciffically states the WX transmissions are ok.

Part 5 probably applys in this case.

(5) Communications, on a regular basis, which could reasonably be furnished alternatively through other radio services.

However this is for the United states.   I am sure that Canadian rules are differant.

Hello, friends -

Here is a story that may give you something to think about if you are considering a radio purchase.

Some years ago I bought a Yaesu FT-5100 dual band (2m/70cm) transceiver. It has worked quite well for me. However, over the past two years I have noticed that the liquid crystal display has begun to show a crescent shaped black mark in the upper center. So far this has not caused any problems, but I can foresee that it will grow and eventually the display will be unreadable.

I spoke to my favorite dealer and he told me that he could get it repaired with a shorter turn around time than if it went directly to Yaesu. OK, I said let's give it a try. Unfortunately, his technician promptly sent it to Yaesu.

After nearly six weeks, Yaesu told the dealer that there was more wrong than just the display. It had also lost power - that is it was putting out about 20-25 watts instead of the expected 50. Cost of total repair would run in the neighborhood of $450.

My response was "just fix what I asked for, no more"

Yaesu's reply was to the effect that it was an "all or nothing deal". They would not just replace the display.

At that point I said don't bother, just send it back. Consider that I can at this time buy any of the following from AES:

Yaesu FT-7100M $300
Kenwood TM-G707A $300
Icom IC-207H $300

Why in the world would I spring for half again as much to repair the 5100 when all three of these mentioned have more bells and whistles?

If someone from Yaesu wishes to defend their all or nothing policy, I will be happy to listen. Until then it will be a cold day in Hades before I purchase another Yaesu product. In the meantime, buyer beware.

Chuck

Nothing..

If you had read the post I made to the bottom, you would have seen the disclamer. I was just correcting another post that was made by another US ham. Don't know how the topic ever got off to the US FCC rules anyway.

On disassembleing my 225A h t for repair, a black wire that was connected from the front case assembly to the I F board became disconected from the front case board. There are also 2 ribbon cables that connect betwen these boards. They are ok. One end of the black wire is soldered to a lug which is held to the I F board with one of the I F board mounting screws. I dont know at what point the other end is soldered on the front case board. The schematic or pictorial doesnt show this wire. May be a static ground. Everything seems to work ok without it. Can anyone help on this?
Thank You

Thanks to everyone who responded.

I did suspect that what I was suggesting wasn't quite cricket, but I couldn't recall reading any regulations that actually spelled it out. I probably did read the regulation (that Peter Hodgson cited) at one point, but it's likely that it was such an "obvious" rule that, at the time, I made little mental note of it.

As far as your suggestions go, WG, it's all good stuff. Personally, if both Amateur Radio and Saint John Ambulance are providing volunteer services, I fully intend to pull double duty, both as a First Aider and as a Ham operator. (At many of our duties, there's only one or two First Aiders on duty anyway.) My hope is to get other First Aiders qualified so we'll have a pool of "double duty" personnel available. (I'm not always available.)

Possibly a rx-only scanner would be a good solution, as you suggest. (Although it does get into a nit-picky legal definition of "What is 'communication'?" - i.e. if VA3ABC calls VA3XYZ, knowing that Saint John base station is listening in, in the hope that SJ base will get the message and act on it, is that "communication" as understood by Radio Regulations 47(a)? I would say it is, but I also think the chances of someone being zealous enough to pursue disciplinary action over it would be close to nil :-)

I have a Radiotelephone Operator's Restricted Certificate (Aeronautical) myself. Saint John Ambulance also runs their own Radio Operator's course, which is a pre-requisite to being allowed to use their radios (and which I'm also qualified to instruct).

I've arranged for a guest speaker from the local ARES branch to bring their Mobile Command Post out and give a demo/presentation/Q&A session on their role in Emergency and Disaster Response, which I'm hoping will drum up some more interest. (We just have to set a date for it.) Also, our youth groups have "Proficiencies" (similar to Boy Scout badges), of which two are "Radio Communications" and "Electronics". Looking at the requirements, those two together seem to meet almost all the criteria for the Basic Amateur license. So if nothing else works, I may see if I can teach the two proficiencies over the course of a training year, and then point out (near the end of the course :-) that they could get their Ham Radio license if they wanted.

Sometimes, you just have to be sneaky.....

Earth Wolf (VA6UE)

--
In accordance with a first aspect of the present invention, there is provided a transportation facilitation device including a circular rim, a bearing in which a hollow cylindrical member is rotatable about a rod situated within the hollow cylindrical member, and a series of connecting members connecting the circular rim with the hollow cylindrical member to maintain the circular rim and the hollow cylindrical member in substantially fixed relation, wherein the rod is positioned on an axis perpendicular to the plane of the circular rim, and substantially central of the circular rim.

Abstract from John Keogh's successful 2001 application for an Australian patent (Innovation Patent #2001100012) for the "Circular transportation facilitation device" aka "wheel".

Remember a ham can dispatch for the Service but the Service dispatcher can't dispatch the Hams. That is why you need the ham in the dispatch center then you will have no trouble even if the dispatcher is un-licensed so long as the ham is in control. The police ware I was made it mandatory that everyone on our teem including the hams had a Restricted Land ticket to use their radios. It is a good first level license to get and useful.
About the scanner I take it that your people know not to act on anything unless it is right in front of them unless they are dispatched to do so?
I would also recommend that you take up most of your questions with Industry Canada. They are a good bunch of guys and a great source of information.

I have for sale a radio shack pro 34 scanner in excellent electronic condition.

Emphasis is on electronic because the battery door is broken (flops around) and there are marks on the side of the unit.

This scanner picks up real good, has good audio, squelch kicks in a
Around 20 - 25% and of course, naturally no gaps!!!!

Items included: one (1) pro 34 scanner
one (1) repaired ac adapter
one (1) standard rubber duck antenna

I will pay the ground shipping charges!!!!!!

First offer over $55 gets it !!!!!!!!!!!!!

Sorry only payments via paypal accepted for this one time offer.

You may check my ebay feed back by using the user id jammtc on ebay.

Please make paypal payment as well as inquiries to jammtc2000@yahoo.com.

I will reply to all email within fourty-eight (48) hours.

Thanks,

jodia

Hmm - sounds like I need to go back and re-read the regulations before I shoot myself in the foot :-)

>About the scanner I take it that your people know not to act on anything unless it is right in front of them unless they are dispatched to do so?
>

Probably not. In fairness, it's never come up before - we have our own radios and our own channels and up to now, have worked exclusively amongst ourselves. It's only within the last year (for obvious reasons) that a big fire has been lit to update our Emergency and Disaster Response planning.

>I would also recommend that you take up most of your questions with Industry Canada. They are a good bunch of guys and a great source of information.
>

I will probably also join the local ARES chapter when I get a chance.

Again, thanks to everyone who responded.

I've been inactive as a ham for about 3 years. In that time I moved. I just went to the fcc web page to find form 610 to change my address, and it wasn't even listed. Am I recalling the wrong form, or has it changed or something?

Thanks

Bill -

Welcome back to the hobby. The FCC Form 610 is history, and no longer used.
All of the following information was obtained from the ARRL web site:
www.arrl.org

Here are the "new" necessary FCC forms:
http://www.arrl.org/fcc/forms.html

You may also have to the RF Safety Certification
http://www.arrl.org/fcc/RFSAFIN2.pdf

You may have also missed the FCC Restructuring Order of Amateur Radio on
December 20, 1999
(Something for the new Millennium)
http://www.arrl.org/news/restructuring/

W9GB
ARRL member since 1972

Sounds like you do not own an automobile of this age.
Good luck, you are going to really surprised.

Maybe you should just lease the radio,
most people seem to lease their cars these days, so they always have a new
one.

Greg,

Thanks for the reply, and thanks for the extra info.  I'll dig into it so I
can
be sure to be current.  With today's extra need to be aware and prepared,
my wife and I thought it a good idea to update everything.

I was aware of the license restructuring.  We are both proud to be 13wpm
Generals.  We wish we had gotten the Advanced licence prior to it's
elimination, but didn't have the time.

Thanks again, 73

```

I've recently programmed a 42-50 Mhz Motorola Maxtrac to the 6M amateur band. I used the modification on the "Batlabs" page, adding some solder to get it to transmit beyond 50 Mhz. It helped, but only to the point where I can get full output to about 51.6 mhz. Beyond that, the power folds back to about 20W. Does anyone know of any modifications that can be done to extend the coverage by another 1 Meg or so? How about any other web sites that discuss the issue? Please, if you can help, drop me an E mail at njscan@lycos.com Mt ISP is having issues with USENET so I can't always access it. Thanks

Bob

re: a previous post about a Yo-Yo, or RadioShack reel-in antenna...

Here's another cheap "down in the dirt" way to do it ...

Get a wind-up chalk line from the local hardware store. Take it apart
and
replace the chalk line on the spool with some 28 ga. Wire.   Reel it all
in and
put whatever kind of connector you want, sticking out of the end of it.
You can do much better than just 40 ft.

/Carl

You'll have to obtain an FRN number. Start here:
http://www.qrz.com/i/fccsoup.html

The actual place to apply is:
http://wireless.fcc.gov/uls/

Once you get your FRN and password set up, you can make all the changes to your license online. I fixed a misspelling in my address, and it was simple to do. No cost for hams to do it this way; if you go through a VEC to make the same changes, it will cost you a few dollars.

BTW, you'll need to get an FRN to renew your license... *unless* the FCC changes their system yet again in the next couple years!

The name of the movie was "The Anderson Tapes."

That would be a safe assumption. Definately look for 'original' in description and/or title. If you are in doubt ALWAYS email the seller beforehand and ask.

If you don't mind copies check out www.sarrio.com. Pretty decent: crisp text, clear pics. There is a guy from Canada (eBay ID is VE3VSP) that offers them on eBay. Nothing fancy but very high quality reproduction text/pix.

The best (almost like the original) is from http://www.radioreprints.com/ but they specialize in boatanchors.

Watch out for CD's. One one hand they can be very nice if it's indexed, PDF, etc.. On the other if it's just a bunch of scans/jpegs. it's next to useless.

This is probebly not normal procedure, although break, when said once, can mean
"may I come in" but should not be used on CQ.

At our ARRL convention here in Escondido, I asked a Meteor Scatter expert
about this and he said that "CQ Scatter Break" has been a protocol for many
years.

However, for proper recommended use of break -- see URL:
http://www.arrl.org/tis/info/pdf/repeater1.pdf

--
I Doubt, Therefore I Might Be

The word "break" has been use in meteor scatter propagation for years. It is and has been, an accepted in the

meteor scatter comunity. It is used to
indicate the end of a transmission because
of the very short bursts meteor trails will produce on vhf.

It's funny you say that because what prompted me to ask this question in the first place is because I heard a local using this terminology, but it was after a very long CQ call.. what's the sense in making a long CQ call and ending with break? Since it's intended to be used to signify the end of the call because of the short bursts, shouldn't the CQ itself be short?

Amateur Radio Newsline™ Report 1306 August 23rd, 2002

Amateur Radio Newsline report number 1306 with a release date of Friday, August 23rd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Europe prepares for another ham in space and a technology called AMBER Alert finds another kidnapped youngster. These stories and more are next on Amateur Radio Newsline report number 1306 coming your way right now.

(Billboard Cart Here)

**
HAM RADIO IN SPACE: BELGIUM TO LAUNCH HAM ASTRONAUT

Europe is about to launch another ham radio operator into space. He is from Belgium and the QSL cards are already being prepared as we hear from Jeramy Boot, G4NJH:

--

Belgium's second astronaut to go into space is a radio amateur. Frank De Winne, ON1DWN, will join the International Space Station at the end of October this year. The exact timing of the flight is not yet available.

Gaston Bertels, ON4WF, who is Chairman of ARISS-Europe, has organized an amateur radio contact with the Belgian air force Royal Technical School. Bertels says that there may be other opportunities for operators to make contact with the mission as well. A full color QSL will be available. QSL cards and listener reports should be sent either direct or via the bureau to ON7AQ.

Jeramy Boot, G4NJH.

--

More information will be made available as soon as a launch date is set. (GB2RS)

HAM RADIO IN SPACE: BASS TO FLY

Another flight being watched is a Russian re-supply mission this October. One that may carry a United States pop music star as the third space tourist to the ISS.

After weeks of squabbling, Russian authorities announced late last week that teen heart-throb Lance Bass of the boy-band 'N Sync will probably travel to the international space station after all. Bass still has not paid any of the estimated $20 million for his flight but a spokesman for Russia’s RKK Energia has also confirmed that plans for Bass' seat is being held for him and launch preparations are moving forward.

If Bass makes the trip to the International Space Station, he will become the youngest person ever in space. This title has been held since 1961 by former Soviet Union cosmonaut German Titov who was only 25 when he made his first flight. Bass was born in 1979 and is currently 23.

At airtime, Bass’s sponsors have indicated that his every waking moment on orbit will be pre-planned. This could mean no ham radio using the ARISS Amateur Radio station on board the ISS. (ARNewsline™ from published reports)

EMERGING TECHNOLOGY: UPS NOW NEUTRAL ON RFID TAGS

United Parcel Service now says it's neutral on a SAVI Technology's proposal to permit higher duty cycles than current Part 15 rules permit for Radio Frequency or RF ID tags. These are tags used for tracking shipments and packages, among other applications. The ARRL has said that adopting SAVI's proposals would result in severe and harmful interference to Amateur Radio and has opposed the plan.

And the ARRL Letter now reports that UPS recently clarified its position in an ex parte filing to the FCC. In its statement, the shipper said that it takes no position on the rule changes proposed in the SAVI Petition because they will have virtually no impact on U-P-S's shipping operations. Also, that the requests are inconsistent with efforts to promote international standards for RF ID tags. The change in position is highly significant because United Parcel Service has an equity interest in SAVI through its UPS Strategic Enterprise Fund. (ARRL Letter)

**

EMERGING TECHNOLOGY: AMBER ALERT SAVES ANOTHER KIDNAPPED CHILD

Some hams in California are looking at ways to tie their repeaters in after the states new AMBER Alert system has helped to safely locate yet another kidnapped youngster. Nichole Timmons vanished from her bedroom in Riverside California on Monday night August 19th. She was found the following afternoon in rural Nevada based on tips called in by motorists who recognized the description of the girl, her suspected abductor and the truck they were in.

A description was flashed on electronic road signs across several South-Western states as part of a multi-state alert. At about 2:40 p.m. on August 20th, Nevada police spotted the girl's former baby-sitter, Glen Park, and Nichole driving through the Walker River Indian Reservation north of Reno. A tribal police officer stopped the pair and Park was taken into custody. Riverside Police Chief Russ Leach told reporters that the arrest came about because Nevada state police used their AMBER Alert system and received a tip from a passing motorist.

As previously reported, the AMBER Alert system is based on a program developed by Dallas-area broadcasters and named in memory of nine year-old Amber Hagerman who was kidnapped and murdered in 1996. It uses a combination of two-way radio, telephones, fax and data communications to quickly spread word of a child abduction. In theory it could also be interfaced to ham radio repeaters and packet networking systems. More important, with Nichole Timmons return, the AMBER Alert system is now credited with safely recovering at least eighteen children since 1997. (ARNewsline from news reports)

EMERGENCY COMMS: REPORT SAYS NYC EMERGENCY RADIO SYSTEM FLAWED ON 911

Poor radio systems with no inter-operability contributed to the casualty count in New York City last September 11th. This as a report on the aftermath of the terrorist attack targets the city’s emergency radio system as not being adequate for the task that day. Amateur Radio Newsline’s Bruce Tennant, K6PZW, tells us what that report had to say:

--

The report was prepared by high ranking New York City department officials aided by the management consultant McKinsey & Co.. It found that the rescue effort while highly, successful was hurt by a failure of city departments to work together, poor organization and a faulty radio communications system.

The radio system caught a lot of criticism. It was singled out as being the biggest problem after firefighters had entered the twin towers.

The report found that once inside, radio communications problems left many commanders and firefighters unable to communicate with each other. To make matters worse, the fire department's radios were incompatible with the police radio system and vice-versa. In other words, no inter-operability between police and fire and no direct radio communications between the two agencies.

New York City Mayor Michael Bloomberg has assured the city that the fire department's radios work properly in the future. This, regardless of the cost of improving it. Police are also considering opening the department’s citywide system of repeaters to the fire department in order to help solve the communication problem for future joint efforts.

Even with the radio problems an estimated 25,000 people were evacuated from the twin towers that day. Mayor Bloomberg calls it the most successful urban emergency evacuation in modern history.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW.

--

As widely reported, ham radio operators were among the first on the scene in lower Manhattan. They operated using an array of their own equipment and networks providing communications to all who need it. Hams and their gear performed almost flawlessly in the hours, days and weeks following the September 11th terrorist attacks. (ARNewsline™ from published news reports)

**

ENFORCEMENT: TAKE THAT LINK OFF THE AIR

The FCC has ordered a Los Angeles area ham to get coordinated or remove a repeater link from the air. Daryl Duckworth of the agency’s Consumer and Governmental Affairs Bureau explains the action taken:

--

Duckworth: “We issued a letter to Leobardo Coronado, KC6PXL, of Sun Valley California, ordering that on receipt of this letter to KC6PXL, that an uncoordinated repeater link must be shut down until either coordination is obtained or a detailed plan is submitted that will prevent interference to a coordinated repeater operating on the link frequency.”

--

Coronado was warned that his failure to shut down the uncoordinated link will result in enforcement action that could include license revocation and a monetary forfeiture of up to $7,500. (FCC, RAIN)

**

WITH THE FCC: FCC UNIVERSITY" LAUNCHED - CONTINUING LEARNING FOR THE FCC STAFF

The Federal Communications Commission has launched what it calls FCC University. This is a new program to ensure that FCC staff members have the cutting edge knowledge and skills to respond to the challenges of the communications field in the 21st century.

According to the CGC Communicator, FCC employees can choose from a vast array of courses on generally applicable subjects. There are also sections of FCC University that are specifically geared to meet the educational needs of engineers, economists and lawyers working for the agency. Complete information on FCC University is on the web at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-225430A1.doc (CGC Communicator, FCC)

CONVENTIONS & HAMFESTS: BIG BUSINESS IN HUNTSVILLE

In news from the ham radio business world, last weekends Huntsville Hamfest in Alabama may have signaled a turn-around for those who make their living selling ham radio gear. And that’s good news for more than just Amateur Radio.
David Black, KB4KCH, reports:

--

While a great deal of the world’s Amateur Radio equipment is manufactured in Pacific Rim countries, most of it is sold right here in the United States. The majority of sales are by family-run businesses. And as the U-S economy sagged so did ham gear sales. Slow sales meant the end for some businesses. Others struggled to survive. Now, there appears to be a turnaround with word of a fantastic sales weekend at the Huntsville Hamfest in Alabama. How good was it? Chip Margelli, K7JA sells equipment for Vertex-Standard:

--

Margelli: “Well, it has been a great show this weekend. The crowd was very active, especially Saturday morning and early afternoon. Sunday has been busier than normal and we have had great weather and a good turnout. A lot of

boxes have been going out there door and there has been a lot of interest in the new products.”
--

Good sales aren’t the only encouraging news at Huntsville. Event organizers are thrilled at other figures—the number of people attending. While the exact gate figure was not yet available, Hamfest General Chairman Scotty Neustadter, W4WW says it could be a near record year.

--
Neustadter: “I was a little bit hesitant to think that myself. I try to error on the side of caution. But I was very, very pleased and I am thinking that we are definitely up from last year and the year before. The attendance would be a record for a Huntsville Hamfest with the exception of the year that we were the ARRL National.”
--

Neustadter’s enthusiasm is echoed by Todd Mowery. He’s with ATOC, the company distributing Alinco ham gear. Mowery says Saturday was especially good.

--
Mowery: “Oh, I thought it was a very good weekend. Saturday was very crowded. Very impressive.”

“I enjoyed it a lot. The booth was busy. We have quite a few new products over the last year that we put out -- mostly in the HT realm. And they have done really well for us. And the crowd that showed up yesterday enjoyed seeing those new radios.”
--

The most succinct evaluation of Huntsville probably comes from Gary Green, N4CJX, of Ten-Tech, who needs few words to describe how he feels about this Hamfest:

--
Green: “We love Huntsville.”
--

Green says Ten-Tec will be back next year. Just about everyone else is saying they will, too.

From the Amateur Radio Newsline Southeast Bureau in Birmingam, I’m David Black, KB4KCH.

--

One more word about this years Huntsville Hamfest. It concerns the D-X Banquet. Bill Hall, W4GBF, was one of the banquet planners. He tells Amateur Radio Newsline that for the first time in its history the banquet had more people want to attend than there were seats available. Hall could not talk with us very long. He was out scouting up extra seating. More on Huntsville a bit later in this weeks newscast. (ARNewsline™)

**

CONVENTIONS & HAMFESTS: ARRL IN SOCAL

Successful ham radio conventions are not limited to Alabama. Information out of California indicate that the Southwestern Division Convention was also a success. Reports from San Diego say that there were plenty of vendors doing a brisk business and all of the forums were jammed packed. We spoke with Gordon West who was on the roof doing antenna work. He was one of the presenters at the convention and Gordo says it was two thumbs up show:

--

West: "I'm up on the roof doing ATV antenna work and ATV as well as emergency preparedness was one of the many topics that we talked about at the Southwestern Division Concention. And boy-oh-boy was it busy. The aisles were packed on Saturday morning all of the way through Saturday evening and the outside exhibits of the emergency communications vehicles were well attended"

--

Highlights included the FCC's Riley Hollingswoth, K4ZDH, hosting a two-hour enforcement session and Bob Heil, K9EID, presenting his famed audio conference. One source tells Amateur Radio Newsline that there were about 1500 people who made the trek to San Diego for this show. (ARNewsline™)

YOUTH IN HAM RADIO: 2002 YHOTY AWARD PRESENTED TO KB3GWY

Saturday August 17th was a special day for a Reading Pennsylvania teen. That's when seventeen year old Josh Abramowicz, KB3GWY, became the 2002 Young Ham of the Year. Amateur Radio Newsline's Don Wilbanks, KC5MFA, was at the Huntsville Hamfest where the presentation was made:

--

Abramowicz: "I share the enthusiasm of my colleagues at home when I say that ham radio extends many, many opportunities to the youth of America. There are many young people in our country that take an interest in our great hobby. Unfortunately, there are those who have not heard or seen our hobby and I believe that it is a great thing to spread our hobby as far, as wide and as much as we can."

--

That's 17 year old Josh Abramowicz, KB3GWY, as he accepted the 2002 Amateur

Radio Newsline Young Ham of the Year Award. Abramowicz was honored for his work in promoting Amateur Radio in and through the Boy Scouts of America. He says that its important to let other kids know about ham radio.

--

Abramowicz: “The youth of America are interested, but in to many cases they never see any of the action that our hobby provides. Therefore, I think it is our job -- young and old -- to do our best to pass our hobby on to the next generation and this can be done in a lot of ways.”

--

Abramowicz went on to detail how this can happen:

--

Abramowicz: “I've done it through Venture Crews. There are also many other ways. There is youth groups, families promoting Amateur Radio to the youth in your neighborhood. They are the future of Amateur Radio. Much like a lot of our radios and a lot of our equipment, all it needs is one spark.”

--

And after receiving his gifts from Amateur Radio Newsline, Vertex-Standard and CQ Magazine, KB3GWY turned the tables with a special gift of his own:

--

Abramowicz: “I have here a couple of patches from the K2BSA station from the National Jamboree. These are limited edition patches with “Radio Scouting” written on it. There is K2BSA and it has the world symbol for Scouting. First of all I would like to present one to Mr. Bill Pasternak for his kind generosity. I’d like to give one to Chip from Yaesu for his kind generosity also the gentleman from CQ.”

--

Josh then donated his major gift from Vertex Standard -- a Yaesu FT-817 to the Boy Scout Venture Crew he is involved with:

--

Abramowicz: “I just want to say that the equipment will be going to the Venture Crew and the future efforts of our Venture Crew working with youth and getting them on the air. So thank you. (applause)

--

And Amateur Radio thanks Josh Abramowicz, KB3GWY, for being another excellent example of ham radio youth at its very best.

For the Amateur Radio Newsline, I’m Don Wilbanks, KC5MFA.

--

Want to hear more? Well you can. We have the entire 13 minute ceremony posted as this weeks Newsline Extra. Just go to www.arnewsline.org and click on this weeks newscast number at the top of the main page. (ARNewsline™)

**

INTERNATIONAL-UK: BIG UK 5MHZ EXPERIMENT FOLLOW-UP

The British 5 MHz propagation study using Amateur Radio is picking up speed. This as an increasing number of U-K hams apply for a Notice of Variation or N-O-V to let them take part. Once again, from Nottingham in the U-K here is Jeramy Boot, G4NJH:

--

During the first few days of the 'Fivemegs Experiment' a large number of NoV holders have made contacts with each other across the UK. Radio amateurs in other countries are showing great interest in this experiment, but we must make it absolutely clear that this has been authorized in order that we may carry out propagation investigations, antenna experiments and some emergency radio training within the UK. At the present time a very small number of US radio amateurs are authorized to conduct similar experiments under the group call sign WA2XSY. We know of no other amateur stations outside the UK who have any authority to call in. Jeramy Boot, G4NJH.

--

More on the British 5 MHz experiment in future Amateur Radio Newsline reports. (GB2RS)

**

INTERNATIONAL - CANADA: NEW VE5 SM

From our friends up North comes word that Bruce Donovan, V-E-5-N-D was recently re-elected Radio Amateurs of Canada Section Manager in the Saskatchewan Section. This, for a two-year term that will begin on November 1st. Donovan ran unopposed eliminating the need for a balloted election. (RAC)

**

INTERNATIONAL - JAPAN: HAM-FAIR TOKYO

The 24th and 25th of August, saw one of the world's largest ham radio shows takes place in Japan. It’s the Amateur Radio Festival better known as the Ham Fair and was slated for the giant Tokyo Exhibition Center. Last year Ham Fair attracted over 35,000 visitors. (JARL)

**

DX

In DX, K3TKJ is active on 40 to 6 meters as C6ALW from Andros Island in the Bahamas. He is there until the 18th of September and activity is mainly on SSB, but with some CW on 6 meters. (GB2RS)

HF98JP is a special event call sign activated by SP9HWN through the 31st of August to celebrate the visit of Pope John Paul the Second to Poland. The station is active on 80 to 6 metros CW, SSB, RTTY and PSK31. QSL as directed on the air. (Modern DX)

**

THAT FINAL ITEM: LICENSE DRIVE

And finally the story of a license drive. Not a campaign to get people their ham license. Rather the tale of one determined applicant who could not wait. It took place down-under as we hear from Q-News Graham Kemp, VK4BB:

--

Here's an amazing story of amateur enthusiasm that must be one for the record books. After many years of trying, Roscoe VK3TPJ was overjoyed on receiving news of his pass in CW.   After all Roscoe has had a well-equipped HF station for years but hasn't been able to use it without supervision.

So enthusiastic was our Roscoe that waiting for the call sign in the mail was not for him. So he immediately jumped in his Falcon and drove 1000K up to Sydney to visit the ACA in person. He arrived at around 5am and waited a few hours for the office to open.

When it did, he was told he needed a passport photo to stick onto his new certificate. Undaunted, he went downstairs to an instant photo machine at Wynyard Station. Five minutes later he was back, photo in hand. Another five minutes elapsed and Roscoe was VK3KRH - authorized to operate on all amateur bands. The task achieved, he got in his car and drove straight home again - after just four hours in Sydney and a round trip of approximately 2000 kilometers!

--

Congratulations to the new VK3KRH.   You can catch up with him on 160 meter AM during the morning hours. (Q-News)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). I just came across the eQSL website and found that I had 8 eQSL's waiting for me. Why do people send eQSL's without first checking to see if you use the service?! If I wasn't just browsing the net and stumbled across the site, I never would have known they were there. Maybe I'll pay the $1 per card and have 'em mailed to me. I am not concerned with them being "valid" for any awards as I do not really track awards, but if I DID decide to put in for awards eventually, are they valid?

Subject: The typical Ham
Message-ID: <20020825211859.28630.00002316@mb-mn.aol.com>
Xref: archiver1.google.com rec.radio.amateur:4159

The typical Ham is:
older Male,
overweight,
overly concerned about "Ham politics",
is ritualistic about the way they "Ham",
obcessed with Ham Radio,
non-technical (except about selecting antennas for their "rigs"

Most Hams are old men. There are few females in Ham Radio. The few young people in Ham Radio are often related to older Hams.

Ham Radio today makes one overweight. Otherwise, why would the great majority of Hams be overweight? "Contesting" is the essence of Ham Radio. Contesting is making as many contacts as you can withing a certain time period. Contesting is a low movement activity. As a result of less physical activity, and lack of restraint in one's diet, one becomes overweight.

Go to a Hamfest or Ham Radio meeting and you will see that this is true. The great majority of Hams are overwwight. Not just a little, but very overweight. True, the majority of Americans are overweight. But Hamfests show that a greater percentage of Hams are overweight.

Hams seem to be obcessed about the latest regulation related to their hobby.

Their hobby seems to accomplish nothing. It is a meaningless activity to entertain oneself. Contesters make rapid fire contacts. They only exchange call signs, log in their contact, and then move on to the next contact. Hams seem get a thrill by doing this.

Hams have alot of rituals they follow, secret societies, codeword jargon. And I havent even mentioned Morse Code yet. Hams tend not to be technical, except when it comes to their antennas. Some take great interest and become quite good with antennas. However, the expertise stops there. Antenna knowledge is only useful in that it helps them select the best antennas for their radios. The goal of Ham Radio, dont forget, is to contest - make as many contacts as possible.

Hams are very obcessive about their hobby. The obcession is amazing. Hams try to mention Ham radio whenever they can and try to recruit. Hams get vanity licence plates with their callsigns on their plates. Hams will take a day off work if the Hamfest starts on Friday. One Ham said he moved to a particular state because he was a Dxer and there were better propogation conditions in that state!

The sad thing is Hams tend to find their contests interesting. Ham Radio needs to include more perspectives if it is to attract more members. Ham radio could be more interesting. It could have a variety of people, do interesting activities, have interesting conversations, interesting do more technical things with radio. However, this is not what Ham Radio is today.

Hams do not usually achieve much besides winning "contests", which makes them feel good. Outside of Ham Radio, this means nothing. Within Ham radio, it tends to be forgotten with the next contest. There are many contests and their scores are published regularly in Ham magazines. As a result of their obcession, Hams have little time to accomplish anything else, and therefore are less successful. Ham Radio is a pathetic hobby, and the typical Ham is pathetic.

Thing is, people are either going to ignore this or post an "FU" message, then go on their way. A better troll who wanted to start a real mess would post something that would draw people out, focusing their anger on each other or another group. Here though we can see that it's just you, discount the source, and go about our day.

Try again though. Maybe with practice...

i think at this time they are NOT valid in any contest or award other than what EQSL does themselves
as for why people send cards like that could be laziness or just assuming everyone is on it i know when i went there i too had a bunch there waiting for me
as for paying $1 a card why dont you just bring up the image on your screen and print it out on your printer would look nearly as good and a lot cheaper

Hi Ozzy, try this link http://www.hfradio.org/wb8rcr/ . It's a really nice
and easy to use card maker or you can use Word to make your cards.

Subject: 2m/70cm Rig In House & Antenna On Car????????
Message-ID: <20020718235346.05854.00000490@mb-fm.aol.com>
Xref: archiver1.google.com rec.radio.amateur:3985

I just got my first radio....a Kenwood TM-G707A 2m/70cm dual band. I currently have it installed in my car along with a Radiall/Larsen NMO Magnetic Mount with 12' of coax (which is made with a thin layer of plastic on the magnet to prevent scratching the car) & a Diamond 2m/70cm radialless mobile NR770NMO antenna. The antenna instructions say that the antenna "employs a DC ground structure so that whip element and ground section (outer shell of the impedance matching section) are short-circuited, and center conductor of the feedpoint connector and whip element are isolated."

I'm not sure if I want to use the radio for anything other than moble use. However, I would like to spend time with the radio and learn its many menus. I'd prefer to learn the features of the radio in my home rather than my car. Can I bring the radio in the house, run it off an appropriate power supply but still use the magnetic mount antenna on the car temporarily? If I can, I'd have to of course use a double female connector and 25' of additional coax. I'm not sure if I can add additional coax cable without throwing the SWR off. (I don't have an SWR meter to check). Also, would I have to use the same type cable for the extension or could I use higher quality cable? (I'm aware that the loss is high at VHF and UHF frequencies). I'm also concerned that because the antenna is made short-circuited (see paragraph above) and because the antenna mount isn't touching the car body (because of the plastic covering on the magnet) that I must use the common battery ground off my car to get a proper SWR. If I can use my magnetic mount in this fashion, is it necessary that I keep it on the car??...Perhaps I should temporarily sit it in the attic instead. Thanks for any suggestions.

Put the mag mount on top of a metal file cabinet. You may lose a
little efficiency because it is less than the optimal size ground
plane, but not enough to worry.

Extended coax could create headaches for you.
Happy trails,
Gary (net.yogi.bear)

This is the standard "T" connector being used on almost all new amateur
radios drawing 10 amps of less

Any of the on-line amateur suppliers, every hamfest that I have been to this
year, every dealer that advertises in CQ or QST (e.g. HRO, AES) or
www.packetradio.com has this connector.

I have placed copies of Alled SX-190 service manuals in a .rar file on
my homepage at

http://home.attbi.com/~akikoi/wsb/Allied_SX-190_Service_Manuals.rar

They won't be there long, so get them while you can...

a) I am trying to follow what appears to be a European schematic and the electrolytic capacitors are indicated as two parrallel bars , one as an outline and the other as solid black. Which is positive ?

b) The diode is represented as a triangle with one point touching a bar- The actual diodes only marking is a bar on one end of the body. If I match the actual bar with the schematics bar, will it be in the correct position/direction ?

Thanks !!

Chris

Amateur Radio Newsline™ Report 1301 - July 19, 2002

Amateur Radio Newsline report number 1301 with a release date of Friday, July

19th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The United States takes the gold at W-R-T-C 2002 but ham radio growth in the U-S appears to be standing still. These stories are first on Amateur Radio Newsline report number 1301 coming your way right now.

(Billboard Cart Here)

**
RADIOSPORTS: N5TJ AND K1TO MAKE IT A THREE-PEAT

The Lakers did it in Los Angeles in basketball. Now the Radiosport team of Jeff Steinman, N5TJ, and Dan Street, K1TO have made it three in a row as they win the World Radiosports Team Championship games in Finland. Dave Bell, W6AQ, attended the games. He is just back and we asked him to describe the event:

--
Dave Bell W6AQ: “I got to go out with the camera and watch them in action. And I saw some of thje worlds best contesters and I realized how they win contests: Thst is, they stay focused totally on what it is that they are doing for 24 hours. And other than swap chairs with a co-pilot so that the co-pilot becomes the pilot, those guys are focusted totally on this contest. For me, it is a lesson on how to concentrate and, if you are really into it – how to win.”
--

N5TJ and K1TO operating as OJ3A fended off a very close challenge from Igor Booklan, RA3AUU, and Andrei Karpov, RV1AW, who claimed the silver. The Americans had a score of 1,626,900 to the Russians 1,620,760. A difference of only 6140 points. W6AQ says that regardless of the numbers, these operators are dedicated to the sport of radio:

--

Dave Bell W6AQ: “The two winners this year, Jeff Steinman, N5TJ, and Dan Street, K1TO, also won last year and they won the one before that. And it was not surprising to me, ehen I came to their shack and watched them operate.”

“When I showed up there, Dan Street was the second operator and he noticed me come in and he nodded. I brought the camera up and came right around in front of Jeff Steinman. I was basically between him and his co-pilot. In fact I was actually looking at his face and I am not sure to this day that he even knew I was there – so concentrated was on listening and talking.”

--

The German team made up of Frank Grossman, DL2CC, and Bernd Och, DL6FBL, finished third to claim the bronze with a score of 1,614,591. All of the scores are on the web at www.wrtc2002.org. No announcement yet as to the venue for the 2004 WRTC games. (ARNewsline ™)

**

HAM RADIO STATS: NO GROWTH

The numbers are in and the word is -- stagnant. That about sums up the growth in ham radio since the introduction of a restructured United States Amateur service April of 2000. Amateur Radio Newsline's Henry Feinberg, K2SSQ, takes a close look at the numbers and what they mean:

--

The numbers come from the interpreter of the numbers. And W5YI Report Editor Fred Maia in Dallas Texas says that growth in ham radio is at a standstill.

Maia has been right on the money in his predictions over the years, and he looks back at the past two years in his newsletter. And in it, Fred says that there are just about the same number of Amateur Radio operators under FCC license now as there were in the spring of 2000. That's when the service was restructured.

In April of 2000 there were 678,539 holders of Amateur licensees in the United States and its possessions. In June of 2002 the number was 680,342. Taking into account attrition from people not renewing for any number of reasons, that's a net gain of only 1803 new hams over the past two years. Not allot, but there is a good reason. Keep listening.

Maia breaks the numbers down by license class. In April of 2000 there were 50,077 holders of Novice tickets. In June 2002 there were only 39,930. A loss to the license class of 10,147 but not necessarily gone from ham radio. Why? The numbers for General and Extra kind of tell the story. General is up by 27,037 and Extra by 20,282 since restructuring. Chances are that most of the new holders of General class are probably the results of upgrades by Novices and Technician's wanting a wider range of high frequency operating privileges. This is born out by looking at the numbers for the Tech license which is also down by about the amount General and Extra are up.

So its really been two years of ham radio musical chairs and that was not unexpected. It takes time for as massive a change as the restructuring of 2000 to settle in. It will be the next set of numbers a year from now in 2003 that will really tell the story.

Are we up or are we down? In 12 months we should have the answer.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

The complete set of statistics can be found on pages 7 and 8 of the July 1st W5YI Report. (W5YI Report)

SPECTRUM: FCC PROPOSES ALLOCATION AND SERVICE RULES FOR THE 71-76, 81-86, AND 92-95 GHZ BANDS

New rules may soon be on their way for a set of super high frequencies. David Black, KB4KCH has the details:

--

The FCC has proposed a Notice of Proposed Rule Making designed to promote commercial development and growth of the millimeter wave. This, in the spectrum in the 71-76, 81-86 and 92-95 GHz bands.

This millimeter wave band is also known as the Extremely High Frequency or E-H-F band. It refers to radio signals between 30 and 300 Gigahertz, where the wavelengths range between 1 and 10 millimeters. Research sponsored by the U.S. government has led to the verge of being able to use millimeter waves economically.

One advantage of using this frequency band is that the beams can be tightly collimated, easing channel sharing. Another important consideration is increased path loss due to oxygen and atmospheric absorption which can perhaps be viewed as a positive in terms of frequency reuse for wide dispersal applications such as high speed data transfer.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.

--

If enacted, the new rules will be under Parts 15 and 101 of the Commission's Rules. (FCC, CGC Communicator)

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N7KSO repeater System serving all of Northwest Arizona.

(5 sec pause here)

**

HIGHER AMATEUR VANITY CALL SIGN FEE EFFECTIVE SEPTEMBER 9

The FCC has officially set $14.50 as the cost to apply for, renew or reinstate an Amateur Radio vanity call sign. According to the ARRL Letter, a Report and Order adopted July 3rd says that the new fee schedule will become effective for applications received on or after September 9th.

The current vanity fee is $12 for the 10-year license term. The FCC had proposed the new, higher fee in a Notice of Proposed Rulemaking released March 27th aimed at setting all Fiscal Year 2002 fees. Again, the new higher fee ineffective on September 9th. (ARRL, FCC)

**

ENFORCEMENT: FCC ACTS ON CALIFORNIA REPEATER INTERFERENCE ISSUE

A California ham appears to have decided to quit ham radio rather than fight allegations that he was the source of interference to a repeater. FCC Special Counsel for Amateur Radio Enforcement, Riley Hollingsworth, explains:

--

Riley Hollingsworth: Hollingsworth: “We opened an investigation of interference allegations against Steven Holt, KE6WSJ, of West Hills California. That matter involves interference to the WB6VBV repeater in Palmdale California. We have been contacted by Mr. Holt. He informed us that on the advice of his attorney, he was submitting his license for cancellation.”
(RAIN, FCC)

--

ENFORCEMENT: FCC ACTS ON ANOTHER CALIFORNIA REPEATER INTERFERENCE ISSUE

But Holt is not the only individual involved in a California repeater related issue that the FCC is looking at. Another is Leobardo C. Coronado, KC6PXL, of Sun Valley California. Again, the FCC’s Riley Hollingsworth:

--

Hollingsworth: “Coronado is coordinated for operation on 145.120 Mhz but links to 224.160 Mhz on which there is a coordinated repeater receiving interference.”

--

Hollingsworth’s letter to Coronado said that the FCC had evidence that the repeater operator had taken no action to alleviate the problem even though he had been advised of the interference numerous times. The FCC gave Coronado 20 days from receipt of its letter to write back and advise the regulatory agency about the coordination status of his repeaters and what has been done regarding any complaints. (RAIN, FCC)

**

ENFORCEMENT: FCC QUESTIONS CALIFORNIA CLUB CALL SIGNS

And in yet another California matter, the FCC has requested that Long Beach resident Richard Crow, KB6IAT, justify a pair of club call signs for which he is listed as trustee. The calls are WB6FCC for an organization identified as the Richard Burton Amateur Radio Club and WB6JAM for a club called Jammers for Jesus.

The FCC gave Crow thirty days from the date of its June letter to provide justification as to the need for each of these call signs. He was also directed to furnish the Commission with a list of the names, addresses and telephone numbers of the members of the two clubs. Also, the meeting times and dates within the past year, proposed meeting times and locations within the coming year, and copies of minutes, if any, taken at meetings within the past three months for each club. Crow was told that the FCC would cancel the two call signs if he did not file a satisfactory response. (FCC)

**

EMERGING TECHNOLOGY: WORLDCOM AND UU-NET

Even if WorldComm files for bankruptcy it will have little effect on the way the Intrernet operates. This even though the troubled financially strapped telecommunications giant controls a big chunk of it. Jim Damron, N8TMW and Jeff Clark, K8JAC, have more:

--

WorldComm officials say that even if the company goes under, the Internet will keep running. This, after market analysts predict WorldComm will file for bankruptcy following a major accounting scandal.

The telecom giant handles half of the Internet's U-S traffic through a subsidiary known as U-U- Net. Newly elected WorldCom C-E-O John Sidgmore says that U-U-Net -- will keep going no matter what happens to the WorldCom parent corporation.

According to Sidgmore, U-U-Net handles more than 50 percent of U-S Internet traffic. This includes about 70 percent of all e-mails sent within the United States and half of e-mails sent in the world. Thousands of companies and agencies in more than 100 countries rely on WorldCom for Internet access, including the United States Department of Defense and the U-S Department of State.

--

The bottom line. The Internet and your e-mail are safe even if WorldComm goes away. (Published news reports)

SWAP MEETS: HAM LICENSE A MUST FOR SELLERS AT TRW SWAPMEET

The TRW Radio Club passes along a reminder notice that every seller at its famed monthly Swapmeet must show a copy of his or her valid Amateur Radio license in order to receive a seller's permit. This restriction is for sellers only. Those coming to browse or make purchases are not subject to this rule. The T-R-W swap-meet takes place monthly in the Los Angeles California area but draws buyers and sellers nationwide. (TRW-ARC Via e-Mail)

**

UPCOMING EVENTS: HAM RADIO AT THE SOAP BOX DERBY

Ham radio will be a part of the 65th running of the All-American Soap Box Derby. This, in Akron Ohio on Saturday July 27th. To commemorate the event, members of the Cayahoga Falls Amateur Radio Club will activate special events station W8D from 2000 to 2400 hours U-T-C from July 22nd to the 26th. On the day of the race W8D will be on the air from 1200 to 2000 U-T-C. Look for this one on 7.275, 14.250, 21.275 and 28.340 MHz and Q-S-L to Post Office Box 14, Cayahoga Falls Ohio 44222. (Press release)

**

UPCOMING EVENTS: FORT TUTHILL HAMFEST

And finally one not in Ohio. How about Flagstaff Arizona the weekend of July 26th, 27th and 28th. That’s when the Fort Tuthill Hamfest and Arizona State ARRL convention takes place at Flagstaff Airport oat exit 337 on Arizona State Highway 17. Aside from the usual hamfest fare, the Fort Tuthill gathering has something very special to offer. The clean air of the Arizona mountains and a truly breathtaking majestic nighttime sky. And less we forget, there is the famed Fort Tuthill Saturday evening Barbecue that makes people want to come back for more.

And less we forget, there will also be a wedding taking place at this years Fort Tuthill Hamfest. The groom is James Pastorfield, KB7TBT. The bride is Laura Lindstrom, KD7KYO. They met during an emergency in which the local ham community was involved. Not a ham at the time, Laura was assigned to ride in Jame's vehicle. The wedding is scheduled for 5 PM, Saturday, July 27th. They hope to honeymoon at the Grand Canyon. You can see lots more at www.acra-az.org on the world wide web. (ACRA, ARNewsline™)

POST-IT NOTES CAUSE PROBLEMS

Warning: The effect of Post-It Notes on archived material is devastating. According to the Scripps Institution of Oceanography Library in La Jolla California the glue on Post-It notes eventually hardens and leaves a film that becomes acidic. This results in eventual discoloration and brittleness of the paper. In fact, Post-Its left for more than a month or two on already brittle paper such as old books can cause the paper to tear when the notes are removed. (CGC Communicator)

**

HAM RADIO IN SPACE: LANCE BASS IN TRAINING FOR ISS VISIT

Will a teen heart-throb be the next tourist in space? Possibly as Russian space officials soften their previously tough line on the much-hyped plans for a commercial flight to the international space station this October by pop singer Lance Bass.

Bass has already undergone at least two medical examinations and is now doing a round of intensive training at Russian space facilities. Two weeks ago, the 23 year old member of the group N SYNC began training in Russia at the Star City Cosmonaut Center near Moscow. A few days later, Music Television News reported that as part of his training, Bass would be dropped into the Black Sea for an emergency-splashdown test. He was also to be left in a Russian forest without food and supplies. He must also become fluent in the Russian language, spacecraft flight control systems and standard operations of the International Space Station as a pre-requisite to fly.

The decision by the Russian agency to explore the possibility of Bass' flight was based on the idea that the $20 million ride would have one or more corporate sponsors. So far there is no word as to whether or not Bass would be willing to get his ham license and operate the ham station on board the I-S-S. (Published reports)

INTERNATIONAL - CANADA: VE1QJ APPOINTED ASSISTANT DIRECTOR

Maurice Le Blanc, VE1QJ, has been appointed as an Assistant Director for Radio Amateurs of Canada’s Atlantic Region. Le Blanc lives in St. Basile, New Brunswick province and is retired from the Université de Moncton where he taught English as a second language. He is also fluent in French, English, Spanish and German and has been licensed as an amateur since 1950. (RAC)

**

INTERNATIONAL: UK CONTEST WINNERS ANNOUNCED

The UK results of the special Marconi Centenary Contest that took place in December last year have now been released. This was a 'one-off' event to commemorate the centenary of Marconi's first trans-Atlantic contact between Canada and Great Britain.

The overall U-K winner was Dave Cree, G3TBK, with a total of exactly 400 VE QSOs. The UK winner of the 100-watt section was GI0KVQ with 149 Canadian contacts, while G4ELZ made an excellent 110 VE QSO’s and took the QRP prize. (GB2RS)

**

HAM HELP NEEDED: QSL’S LOST AS LIGHTNING STRIKES

Back here in the U-S-A, Don Moss, NL7CO reports over the VHF Reflector that

Scot Sharp, KD5OMJ, was away on vacation when his house was hit by lightening. Moss says that it appears as though it entered the house through the ham shack modem line.

As a result of the ensuing fire, KD5OMJ has lost all of his logs and QSL cards and he is asking hams who had a QSO with him, to please send him a new QSL. This, because without logs he is not able to determine who he has talked with. Both Sharp and Moss are residents of Lawton Oklahoma. (VHF Reflector)

**

DX

In D-X, word from Ron Moorefield, W8ILC, that he along with K8FL, K8LEE, N9NS, W8GEX and WA8NJR will be operating between 40 and 6 metres as C6AJR from Eleuthera, Bahamas, between the 24th and the 31st of July. Modes will be on SSB, CW and PSK31. The team will also be in the IOTA Contest operating as C6DX. QSL is via N8QET. (W8ILC)

Also word that DL4FCH, will be active, as DL4FCH/P from Pellworm Island from the 20th of July to the 2nd of August. Operation will be mostly on CW, and will include the IOTA Contest. (RSGB)

And word that W2SGX has become a VUCC awards checker in the central New York area. Carl says over the VHF Reflector that he will be available to check cards for VUCC awards at the Fingerlakes Hamfest on Saturday August 3rd. The venue is the Tompkins County Airport in Ithaca, New York from 10:00 AM until 2:00 PM Eastern Daylight Time. (VHF Reflector)

SUPPORT FUND REPORT WITH ANDY JAREMA, N6TCQ

And finally this week, its time for another Support Fund report from Administrator Andy Jarema. This time N6TCQ is not asking for funds. Just some advice:

--

Hi. I'm Andy Jarema, N6TCQ, your Amateur Radio Newsline Support Fund Administrator.

For the past several months, a number of you have written to us -- asking why we are not using on-line payments for Amateur Radio Newsline donations? Well, we have given it a lot of thought. And each time, we end up asking ourselves the same question: does the price tag to establish and maintain this service justify the additional cost?

No matter whose services we use, there are set-up and monthly usage fees for the secure e-commerce web server. And our bank will charge us 3 to 5 percent for every credit card transaction they process.

The answer is simple. Supporters would have to donate enough using this method to break even. Only after that could your generosity be put to work.

So for the next several weeks we'll be asking for your input. Would you use your credit card on-line to support ARNewsline?

Send your answer to newsline@arnewsline.org. If you are reading the Internet version, just click on the link shown. mailto: newsline@arnewsline.org.

Type "YES" in the subject line if you would use this service. If not, type "NO." Feel free to make any comments in the body of the e-mail. We'll tally the results and report to you in a future Amateur Radio Newsline report.

Remember, Amateur Radio Newsline is a 501(c)(3) corporation. Your donations are tax-deductable and your support is always appreciated.

That's it for this week. I'm Andy Jarema, N6TCQ.

--

In case you missed those instructions you can find them in the print edition of this weeks Amateur Radio Newsline report. (ARNewsline™ Support Fund)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline™. Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline™, P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Roy Neal, K6DUE, saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Does anyone have any mods for the Midland / Alan CT-79 handheld? I've searched a few places on the net but can't find any info for this model. Specifically, I can't enter frequencies in the 440 range, only the 430 range.

Any help would be appreciated.

Thanks,
Jason VE3TYG

Hi !
What do You think about preamps on
MGF1302 on 2m and 70cm ?
Which construction of preamp is the best ?
I know thant DJ9BV has constructed
preamp on MGF1302 on 70cm, but
i can't find it. Could somebody send me
somethink about this ?

Thanks
Bizon

I don't have a service manual for this radio and I would like to know
what the adjustment post are on the 2 meter modual my friend has an
IFR sevice monitor and a bird and he wanted to make some power and
audio adjustments to it. could any one be of help.
Thanks, in advance Allen, KB8YWY

If you lost your MC-50 manual this is available"on-line" at
http://www.mods.dk

Select "Kenwood" and then "Manuals".  Entire MC-50 manual is there, just
print it out.

For those interested in Amateur Radio Experimentation, there is a new club, the Amateur Radio Experimenter's club, in Reading, MA. There will be a meeting this Wednesday, July 24, at 7:00.

The experimenter's club would be open to anyone interested in electronics, any licence class, or unlicenced welcome. Hams, students, professionals are all welcome to join. If you are in the area and are interested in such a club, you can email me. If you have any questions, you can post them to the forum.

The purpose of the club will be to work on circuit design projects, antenna setups, radio measurements, radio direction finding and other aspects of Amateur Radio experimentation.

The meetings are tentatively held alternate Wednesdays at 7:00 at 49 Pleasant St., Reading, MA.

The meetings are at the 49 Pleasant St (Reading Senior Center), Reading, MA

Here are the directions to the Reading Senior Center:

Merge onto I-95N
Take exit 39- RT 28 Reading, Main St
Merge onto RT 28, Main St.
Keep going straight, see Mcdonald's on right side
Keep going straight,
You will see a big traffic light pillar in the middle of the road.
Take a right onto Pleasant St. (Pleasant St is directly across a CVS store on the left side.)

Reading Senior Center is at 49 Pleasant St on the right side.

Subject: Question Regarding Non-Licensee Transmission and 47CFR97.3
Message-ID: <20020723012854.00473.00000115@mb-da.aol.com>
Xref: archiver1.google.com rec.radio.amateur:4011

Question Regarding Non-Licensee Transmission and 47CFR97.3

I would like to get my child interested in getting her license; I got my tech license recently. The question I have is: Can my non-licensed daughter hold and press the microphone by herself and talk assuming I'm right there as the "control operator" and that she (or I) identifies that I am in fact the "control operator" and my call sign is identified? I believe she would get more interested in the hobby if she tried it herself several times. I *think* the issue comes down to whether or not her pressing the mic is tantamount to her "operating" the radio.

A "control operator" is defined by 47CFR97.3 as "An amateur operator designated by the licensee of a station to be responsible for the transmissions from that station to assure compliance with the FCC Rules." Under this definition, I'm still the "control operator" because I'm the one there (at the "control point") responsible for the transmission and "manipulating the operating adjustments in the station to achieve compliance with the FCC Rules."

Any thoughts on this issue are appreciated.

As I understand and practice the rules I believe that it is an acceptable practice to allow a non ham to operate the key of your station provided that you are there and in control of what goes out onto the air. I often allow my son to hold and key the microphone of my radio while he is talking to my wife (she is also a ham) but I do remain in control of what he does by monitoring his every action and being always prepared to remove the microphone from his hand. I also ID our transmissions and state that my

station is engaged in third party traffic. So far it seems to be working, my
son has an interest in earning his license and becoming a courteous ham. I
hope your daughter finds our hobby to be enjoyable also...

73,
Russ - KB1GKN

I guess this isn't covered in the Tech License exam anymore. Yes,
your daughter CAN hold the microphone, she can PUSH the PTT button,
and she can SPEAK into the microphone when the transmitter is
transmitting. She can even initiate a contact should she so desire.
You are the control operator, your callsign, of course, must be used
to identify the station. You are responsible for the operation of the
station and the conduct of the operator.

As long as you are present and actively overseeing the operation, your
daughter can operate on any mode permitted by your license. She would use
your call sign. Just remember that you are responsible for what ever goes
through your station.

Brian,

There is a Yahoo group for this radio, I'm sure you'll find someone
there to help.

I have a 55 foot tower with an A3S (3-ele Cushcraft tri-bander) on my
lot. I wish to install a 80m Horizontal Loop. Based on available
space, the tower and beam will be within the inside area of the square

horizontal loop (68 feet each side). The loop will be positioned at
45 feet height. Will there be detuning issues with either
antenna.....?

This is exactly how I allowed my 13 year old son to get interested in
Amateur Radio - and after a week of playing with my HT and Station Rig,
he studied and got his Technican License. He now has his own HT!

I am selling my personal collection of amateur radio and motorcycle related books, and magazines. All this stuff is up on eBay and here are some sample URLs:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1551865846

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1551866323

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1368530259

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1368530681

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1368526700

These are just a few of the dozens of listings I have regarding Amateur radio and other topics. If you go to one of these URLs, and click on the "view sellers other listings" link, you can see them all!

These items are from my personal collection, and I really need to sell them, so good luck bidding, and see you later!

I went to a hamfest and at one booth there was a big pile of CQ, Ham Radio Magazine, and QST magazines.

The price was very low. I noticed that no Hams were interested in getting the magazines. Eventually, the price was dropped to free and still you could not convince anyone to take them away.

True story. The Ham selling the magazine collection was part of the Ham Radio club I joined - so this can be verified. I managed to get the Ham Radio Magazine issues, didn't want the rest.

Seems that Hams don't want these magazines. If there was any interest, these magazines would be gone pretty quickly.

I don't know what I would do with all of these, but 100 Oncore GT+ receiver
(great for tracking) are now for sale on eBay (Dutch auction), starting at $
30

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1368087129

Happy shopping

Greg

Andrew ZS1AN will be operating from Dassen Island Lighthouse during International Lighthouse and Lightship Weekend using the callsign ZS1AN/P. Dassen Island is the smaller and less accessible of the two islands in IOTA AF-064, the Western Cape Province South West group.

Andrew plans to operate from approximately 1600 UTC on Friday 16th August until 1200 UTC on Sunday 18th August. Mode will be primarily CW, operating on or around the following frequencies: 7026, 14026, 21026 and 28026 KHz. He will be designing a special QSL card with the relevant IOTA information for the occasion. Please QSL direct to PO Box 350, Newlands 7725, South Africa. If you would like a direct response then please include a green stamp or IRC. All other replies will be sent via the bureau.

Please note that the operation is weather dependant as the island can only be reached by small boat. Additional information can be found at www.qsl.net/zs1an/dassen.html.

The RT Systems version does work both:

http://www.cloningsoftware.com/icom_template.cfm?cfid=268019&cftoken=19594897

It is likely that other brands will too.

Happy trails,

Has anybody used Yaesu's in-ear speaker/lapel mic combo (model# Mh-37 a4b). I'm curious about its performance. I purchased a cheap Workman brand equivalent, and I'm not happy with it (yeah, what did I expect, it's workman, but for $9 I thought I'd try). Thing is, there is a loud dull click noise that occurs any time the squelch is broken, at the end of a received transmission, and any time the PTT switch is pressed or released. The noise is almost painfully loud when the speaker is in my ear, and its volume doesn't change with the volume knob.

It seems like this would be a function of the radio and not the speaker, but I'd love to find out that the name brand accessory would somehow function better. So to summarize, has anybody used the Yaesu brand lapel mic/earbud combo, and did it work well for you?

Thanks
Ben

I know this is not exactly Amatuer Radio related, but I am trying everything I can think of to find this.

I recently purchased a Rockwell series 21-100 vertical mill. I would like to do some maintenance on it, and would like to find a manual. If anybody out there has one, I would be willing to pay to have a copy made, and a moderate fee for the trouble. Please respond to this message if you can help. Thank you.

Amateur Radio Newsline™ Report 1302 July 26th, 2002

Amateur Radio Newsline report number 1302 with a release date of Friday, July 26th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A giant solar flare causes problems on the High Frequency bands and a popular ARRL Director calls it quits. These stories are first on Amateur Radio Newsline report number 1302 coming your way right now.

(Billboard Cart Here)

**

PROPAGATION: X CLASS SOLAR FLARE CLOSES HF BANDS

If you have been wondering where all the signals you normally hear on the High Frequency bands have gone, we have the answer. A large flare on the Sun effectively closed them down. Amateur Radio Newsline’s Don Wilbanks tells us about the solar eruption and what it could mean for ham radio:

--

Solar flares come in all sizes, and the Astro Alert service says the latest ones are some of the largest. The E-newsletter says that the sunspot complex believed to be responsible for a July 21st X Class flare rotated fully into Earth’s view on July 22nd. It announced its arrival by spawning a second and spectacularly powerful X Class 4.8 level eruption.

Solar Alert says that this latest flaring region has the potential to produce substantial effects on Earth over the next two weeks and we could see more than we have in the last 10 years. It all depends on whether or not the sunspot complex continues to pump out activity at the same rate that it is presumed to have produced over the last several days.

For radio hobbyists it means that there could be very little to hear on the bands from 1.8 to 30 MHz for a while. And, depending on the level of atmospheric ionization that takes place, it also could bring some unexpected long distance communications to 6 meters and above. If you have weak signal gear for the world above 50 MHz, keep and ear on frequencies like 50.110 and 50.125 MHz and be prepared to hear -- and to work -- the unexpected.

For the Amateur Radio Newsline, I’m Don Wilbanks, KC5MFA, in New Orleans.

--

More on this story is in the Solar Alert URL at http://www.spacew.com/astroalert.html. (WDX6AA)

**

HAM RADIO POLITICS: ARRL BOARD MEETS IN CONNECTICUT

The American Radio Relay League has held its 2nd meeting of 2002. It took place July 19th to the 20th in Windsor, Connecticut. Amateur Radio Newsline's Cathy Anno, KB0FDU, has the details:

--

Perhaps the biggest news came as the Board Meeting was getting ready to begin. Thats when the American Radio Relay League was named to receive a $181,900 homeland security grant from the U-S government to train Amateur Radio operators in emergency communication. The A-R-R-L was among several dozen nonprofit organizations designated to receive upward of $10.3 million in federal money to boost homeland defense volunteer programs. The grant, from the Corporation for National and Community Service Special Volunteer program, will provide free ARRL Amateur Radio Emergency Communications Course training to 5200 volunteers nationwide, starting in 2003.

According to the ARRL South-Eastern Division E-letter, one issue that garnered a lot of conversation was the plan to remove the Section News columns in QST to the ARRL web-site. This proposal was presented last January but a decision was deferred for six months. Now the Leagues Directors, by a 9-6 vote, decided to approve the change.

Starting with the January 2003 issue of QST, columns from the 71 Section Managers will be moved to the web-site. ARRL staff will make provisions for those without web access, to have access to their own Section Managers column. The Board also voted to move the contest line scores out of QST and post them on the web as well.

ARRL's Development Director Mary Hobart, N1MMH, presented a new creative method of increasing member awareness. Soon, ARRL members will be asked to participate in a premium membership program. Various levels of membership will be created, like Diamond Club and Maxim Society. The higher level of participation the better the premium benefit received. Details on this program will be announced soon.

The board named Sherri Brower, W4STB, Vero Beach, Florida, as winner of the McGan Memorial Silver Antennas Award for Public Relations. Bower, who becomes Section Manager of South Florida on October 1st, was cited for her long-term commitment and dedication to present all aspects of amateur radio to the public. ARRL South Eastern Division Director Frank Butler, W4RH, will present the award to Bower at the Melbourne Hamfest in Melbourne Florida on September 14.

For the Amateur Radio Newsline, I'm Cathy Anno, KB0FDU.

HAM RADIO POLITICS: WB8BGY RESIGNS AS GREAT LAKES ARRL DIRECTOR

And a big surprise happened Saturday July 20th during the ARRL Board of Directors meeting on. That's where Great Lakes Division Director George Race, WB8BGY, of Albion, Michigan, unexpectedly tendered his resignation. Amateur Radio Newsline's Fred Vobbe, W8HDU reports:

--

George Race, WB8BGY, who is 66, has served on the ARRL Board of Directors for 12 years. Prior to that, he held numerous other field organization positions including several terms as Michigan Section Manager. Race is legendary within the ARRL field organization for his travels around the Great Lakes Division. Each year he has spenr btween 45,000 to 50,000 on the road on the League's behalf and has literally worn out three cars in the process.

Race admits that a Board vote to move ''Section News'' from QST magazine to the World Wide Web did play a small part in his decision to resign, it was not the primary factor. Rather it was time. Time to devote to his wife and family. WB8BGY sayd that there is life beyond the League.

Accolades for Race were quick in coming. One of the first was from ARRL President Emiritus George Wilson, W4OYI. He told Amateur Radio Newsline that George Race devoted decades to furthering the cause of both ham radio and the League. Wilson called Race a tireless worker on behalf of the hobby adding that he definately will be missed.

Reporting from the ARRL's Great Lakes Division, I'm Fred Vobbe, W8HDU.

--

By normal succession of officers, Great Lakes Vice Director Gary Johnston, KI4LA, was declared the new director. ARRL President Jim Haynie, W5JBP, has appointed Michigan Section Manager Dick Mondro, W8FQT, to be the new Great Lakes Vice Director. A successor to Mondro as Michigan Section Manager is expected to be named soon. (Adapted from ARRL Bulletin, W4OYI)

RADIO LAW: CQ SAYS YES TO NEW HAM BANDS

The publisher of several hobby radio magazines is urging the FCCto proceed in the creation of several new ham bands. However, it is voicing significant concern that the regulatory agency appears to be placing the interests of unlicensed services on a par with, if not ahead of, those of licensed services. Amateur Radio Newsline’s David Black, KB4KCH, tellks us who filed and why:

--

Most magazine publishers traditionally stay out ham radio politics. But the people who publish CQ Amateur Radio, CQ VHF and Popular Communications magazines are making an exception this time.

The publishers have filed comments with the FCC strongly supporting proposals that would create two new amateur bands and elevate a current amateur allocation from secondary to primary status.

CQ wants the FCC to adopt a proposal to create a "splinter band" at 135.7 to 137.8 kHz -- this would give amateur radio its first allocation above 200 meters in nearly a century. The company proposes opening the band to all amateurs with General Class or higher licenses, not imposing mode restrictions and making technical requirements flexible enough to encourage a wide range of experimentation.

CQ is also pushing for creation of a new ham band at 60 meters from 5.250 to 5.400 Mhz. The proposal suggests that full amateur power be permitted; that there be no sub-banding, either by mode or by license class; and that the band be open to all amateurs with HF privileges. That would include CW privileges for hams holding Novice Class licenses or Technician licenses with code credit.

Finally, CQ voices strong support for the FCC's proposal to make the Amateur Service primary on 2400 to 2402 MHz. The publishers say they're very concerned about one Commission request in its Notice of Proposed Rule Making. That requests solicits comments on the change in status that might affect non-licensed users of this band, such as cordless telephones and wireless computer networks.

CQ wants the Commission to reaffirm its long-standing policy that the interests of licensed operators and services are primary on any frequencies shared by licensed and non-licensed users.

For the Amateur Radio Newsline, Im David Black, KB4KCH.

--

CQ's comments were filed electronically and may be viewed in full on the FCC's Electronic Comment Filing System website at www.fcc.gov/e-file/ecfs.html by selecting "Search for Filed Comments," then typing in "02-98" under "Proceeding" on the search page, scrolling through comment summaries until the CQ comments are reached. (CQ)

**

RADIO LAW: COMMISSION REQUIRES RADAR DETECTORS TO COMPLY WITH EMISSION LIMITS

The FCC has imposed new emission limits and certification requirements on radar detectors. This, to prevent them from causing interference to very small aperture satellite terminals that operate with downlink frequencies in the 11.7 to 12.2 GHz band. Tests at the Commission's Laboratory have shown that some radar detectors emit radio signals in the downlink band far in excess of the limits that apply to other unintentional radiators. As a result of the new standards, radar detectors sold in the United States will have to meet the new and more stringent limits. The complete document is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-224518A1.doc (CGC Communicator)

**

RADIO LAW: VOTE ON NEW FCC COMMISSIONER EXPECTED

Ending months of political bickering over judicial nominations, a senate panel approved a longtime aide to Senate Majority Leader Tom Daschle for a seat on the Federal Communications Commission. The nomination of Jonathan S. Adelstein, who has worked for the Democratic leader since 1995, will go to the full Senate for a vote.

Approval is expected, with several Republican senators saying they would vote for the South Dakota native. The FCC panel has five commissioners, who are nominated by the president and confirmed by the Senate. Only three can be from the same political party. (Congressional Review)

**

ENFORCEMENT: WISCONSIN HAM ASKED ABOUT CB SALES

The FCC has asked a Wisconsin ham to explain his connection to a website that purportedly offers for sale C-B equipment not certified by the agency. The FCC’s Riley Hollingsworth explains:

--

Hollingsworth: “We opened an inquirey regarding the marketing of non certified radio equipment including non certified CB transceivers and HF linear amplifiers by Roper Electronics. Roper Electronics has a web page entitled tomah.com, and we are inquiring into the relationship between Roper Electronics and Randi Owen, N9UOM, of Tomah Wisconsin.”

--

Specifically, Owen was asked to fully describe his relationship, if any, with Roper Electronics. Also, if it turns out that he owns or is affiliated with Roper, he was requested to furnish the FCC a listing of all models of HF transceivers and amplifiers domestically sold and/or offered for sale by Roper since January 1st of this year. That list must include the FCC certification number for each model.

The letter of inquiry went out to Owen on June 18th. Hollingsworth says that a reply to that inquiry is do in right now. (FCC, RAIN)

**

HAM SCHOLARSHIPS: FAR SCHOLARSHIP WINNERS ANNOUNCED

The Foundation For amateur Radio has announced this year’s winners for the fifty-seven scholarships which it administers. The names of the recipients for the individual awards appear on a list at several websites including the ARRL. For more information, write FAR Scholarships, PO Box 831, Riverdale, Maryland, 20783. The announcement for the year 2003 awards availability will be made early next year. (FAR)

**

UPCOMING EVENTS: PACKARD AUTOMOBILE CELEBRATION

On the special events calendar, the Warren Ohio Amateur Radio Association will be operating special events station W8P to commemorate the annual Packard automobile celebration and car show. The Warren group will operate on the 40, 20, 15 and 10 meter bands. QSL's go to the Warren Amateur Radio Association, Post Office Box 809, Warren Ohio. The Zipcode there is 44482 (Via Internet Posting)

**

UPCOMING EVENTS: OH-KY-IN HAMFEST

Still in Ohio, but over in Cincinnati, the OH-KY-IN Amateur Radio Society will be holding its annual hamfest on July 27th. The venue is the Diamond Oaks Career Development Campus and this event features seminars, hidden transmitter hunts and a giant flea market. More information on this one is on the web at www dot ohkyin dot org. And in case you are wondering what OH-KY-IN stands for – its Ohio, Kentucky and Indiana – the three states that provide most of the attendees to this annual event. (Via E-Mail)

**

UPCOMING EVENTS: NATIONAL BABY FOOD FESTIVAL

From one of our listeners in Michigan comes word that W1B is a special event operation from the National Baby Food Festival. Yes, there really is a National Baby Food Festival and W1B will operate the General class areas of 75, 40, 20, 15 and 10 meters while its underway. And if you work this one, you QSL with a self addressed stamped envelope to Shawn Gibson, KC8LGD, 3377 West 80th Street in Newaygo Michigan. Gibson’s zipcode is 49337. (Via Internet Posting)

HAM RADIO IN SPACE: RUSSIA SAYS BASS LIKELY TO FLY TO ISS

The Russian space company Rosaviakosmos has announced that N*SYNC singer Lance Bass has signed a preliminary contract and is officially a candidate for a Russian mission to the International Space Station this October. This, even the United States National Aeronautics and Space Administration, which partners with the Russians on the space station project has expressed concerns that the pop musician may lack the proper education, endurance and fluency in Russian to undertake such a journey.

But a spokesman at Russia's Baikonur Cosmodrome training center in says that within a week Bass will begin training. The spokesman said that the singer should be able to cover enough ground to make the trip adding that three months was more than enough time to teach him the basics.

Bass will be the third space tourist to pay Russia $20 million to visit the orbiting outpost. Previous space visitors were U.S. millionaire Dennis Tito KG6FZX and South African entrepreneur Mark Shuttleworth. Tito and Shuttleworth did find time to use the ham gear on board the station. Bass interest in Amateur Radio operations from the ISS is still unknown. (ARNewsline™ from published news reports)

**

RADIO IN SPACE: LISTEN TO JUPITER ON YOUR HAM TRANSCEIVER

Want to hear what’s happening on the planet Jupiter? Just listen on the 15 meter band. So says Popular Communications Magazine in an article aptly titled Listening To Jupiter On Your Shortwave Receiver.

No, you won’t hear the latest scores from the Jupiter Red Sox playing the Mars Marlins. What can be heard is the natural sound of the orange giant. An electromagnetic wave that’s emitted at irregular intervals by Jupiter that the article describes as a sweeping lighthouse like sound.

All you need to listen in is a shortwave receiver that can tune the good old A-M mode and a decent antenna. Exactly how to listen and what to listen for is on pages 8 and 9 o the August issue of the magazine. (PopComm)

**

INTERNATIONAL - NEW ZEALAND: TECHNOLOGY CONVENTION 2003

From Down-Under, word that the New Zealand ham radio Technology Convention will now be held once every two years. Formerly called the VHF Convention, this bi-annual event now caters for a broader range of interests.

The Convention was last in Whangarei over Easter Weekend 2001. The New Zealand

Association of Radio Transmitters days that it is currently is looking for a host club for Technology Convention, 2003. (NZART)

**

INTERNATIONAL - UK: HAMS GET NEW PROPAGATION STUDY BAND:

UK Radio Amateurs will shortly be able to use a number of spot frequencies around 5 MHz, to take part in a four-year propagation study. A full Class-A license holder wishing to take part will require a Notice of Variation to his existing license. At the present time, the final administrative arrangements are being put into place. A further announcement will be made regarding the start date shortly. (GB2RS)

**

INTERNATIONAL - UK: THE GREAT NEW TOOTH PHONE

Meantime, a pair of British engineers say they have invented a revolutionary tooth implant that works like a mobile phone. The 'tooth phone', designed by researchers James Auger and Jimmy Loizeau, consists of a micro sized receiver, transmitter and a transducer that are implanted into a tooth during routine dental surgery. Sound, which comes from the tooth is transferred to the inner ear by bone resonance. This means information can be received anywhere and nobody else can listen in. (Science & Technology)

**

DX

In DX, DJ6TK, is vacationing and operating 6 meters from Bornholm Island on CW and SSB mostly in his afternoon or late evening hours UTC. Listen for him signing JO75LA and possibly from JO74MX as well. (MDX)

I2IA stroke ID9 will be active from Ipari Island through September 15th. He intends to visit also other islands in the Eolie group during this time. (GB2RS)

And a group of operators from Indonesia and Italy plan to activate Masalembu Island as 8A3M from July 29th through August 4th. They expect to be on the air with two or three stations on SSB, CW and RTTY. QSL via IZ8CCW. (OPDX)

**

THAT FINAL ITEM: CAPTAIN KIRK - “THEY BE WHALES”

In what sounds like it’s right out of a Star Trek movie plot, will Captain Kirk and Mr. Spock have to go rescue some whales from oblivion after all? And what does this have to do with radio communications? Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has the answers to both of these questions:

--

In the movie Star Trek The Voyage Home, the crew of the star-ship Enterprise -- without the Enterprise -- takes on the job of saving our planet from annihilation by a space probe. The probe is angry because it is programmed to contact Humpback whales, but it cannot find any because all the whales are long gone from the planet. To save the world, Kirk and crew travel back in time to get some whales and bring them into the future.

With that in mind, picture this. The administration has now given the Navy permission to begin using a powerful new low-frequency SONAR to identify enemy submarines.

SONAR, which stands for Sound Navigation and Ranging, is usually used to observe objects in water to determine distance. According to the Navy, each of the new SONAR's eighteen transducers produces an audio signal equivalent to the noise level you would hear if you stood next to an F-15 fighter jet while I was taking-off. It is this high power that makes it possible for the sound waves to travel several hundred miles and return an accurate target echo.

But environmentalists are worried. They note that that the new SONAR system operates in the same band of frequencies used for communication by many large whales, including Humpbacks. They say that whales are particularly susceptible to SONAR interference because they rely on sound for communication, feeding, mating and migration. In fact, they navigate the oceans of the world using a kind of natural SONAR of their own.

Some scientists believe that whales will mistake the Navy SONAR signals for other whale pods and swim in the wrong direction. And they believe that if this happens, the worlds whale population will decrease.

Others disagree. This group of researchers believes that the two can co-exist with careful monitoring of the whales for any adverse effects which might be noticed. Adjustments could then be made to the SONAR systems operation to minimize or eliminate any problems.

The bottom line is that it's a tradeoff in communications. That of the whales versus the need of the public to be safe from enemy attack.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

The National Marine Fisheries Service says with proper monitoring and safeguards, the Navy's new SONAR is not likely to injure whales or any other marine mammals. But to be on the safe side, we hope Captain Kirk, Mr. Spock and Scotty are standing by. (Adapted from published news reports)

It sounds like the audio amplifier is turned on and off by switching a
relative high DC voltage. This finds its way to the in ear speaker.

It is a function of the radio.

Is it OK when the speaker in the radio is used. If it is then the two
speakers may be operated from different parts of the circuit.

You could try to filter it out with a series capacitor. Value depends on
impedance of speaker.  Try a 0.01uF capacitor and see what happens.  A low
impedance speaker may need 1uF.

Most likely it will make no difference.  ;o(

NEW PROGRAM AVAILABLE

TWINTRAP.exe   33 kilobytes.

Two identical plastic insulated wires are close-wound alongside each other
for N turns on a cylindrical former. The two wires are then connected
series-aiding.

Distributed capacitance between wires resonates with the trap inductance at
the trap frequency.

Advantages  - no high voltage, high current capacitor is needed.  And
trimming wire ends for exact frequency is much easier and neater than with
coax traps.

Download TRAPDIP from website below.

Hi.

On the AMSAT news page, it looks like RS-15 is the only satellite
currently operating in Mode A (2 meters up, 10 meters down). Is this
correct? If so, does anyone know if the satellite is still operating
and able to be used? I'm asking this question because I'm thinking
about setting up a spare radio and antenna as a Mode A downlink
receiver but wanted to hear from other people first.

Thanks and 73,

Jim, KG4NEL

You already have the radio and antenna - why not try
and see for yourself? Am I missing something here?

Sounds like bias pop. You have to correct this at the source of the audio signal. You have to gate the ac signal and not disturb the dc levels in the audio stages. You can also try to shunt the audio signal to the ear bud keeping the same goals in mind, but shunt muting leaves you with some undesirable levels of residual audio during mute. If you have some backend schematics, I might be able to steer you in the general direction.

I am in need of a mobile mounting system for mounting 3 radios.. A
Kenwood dualbander, an Icom 2 Meter, and a Kenwood commercial radio..

If anyone has any ideas or supplier names, I would SURE appreciate it! I
have looked at RAM products already.. Anything else?

THANKS and 73!!

To all you Ht user veterans

I am really new to all this. I have a Kenwood TH-F7E (euroepan version of the Kenwood TH-F6A) and is wondering if the Diamond SRH815 a good antenna? Will it perform better than the original Kenwood rubber duck that came with my HT? What would be a good alternative? I am looking for a high performance short antenna. I mainly use the 2m band, although I do use the UHF, AM,WFM and FM band occasionally. Thanks in advance.

Hi Jim,

unfortunately the bird is alive but: you should have at least 50 W to
a 7 ele Yagi just to hear your weak signal... ; the beacon you can
hear, but also, that there is no traffic at all   :-((

Amateur Radio Newsline™ Report 1303 August 2nd, 2002

==

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. Free FTP Downloads are available at our site by clicking on the newscast number at the top of the website front page.

Amateur Radio Newsline report number 1303 with a release date of Friday, August 2nd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio may be headed to Mars. That’s right. We said the red planet Mars! Find out how on Amateur Radio Newsline report number 1303 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: WE ARE GOING TO MARS

Ham radio could be headed to the Red Planet in a few years. This as the German ham radio space agency announces some ambitious plans for future Amateur Radio operations from outside the Earth’s atmosphere. CQ Magazine Editor Rich Moseson, W2VU has the details:

--

AMSAT-DL the German amateur radio satellite organization has announced plans to build two new amateur spacecraft, including one destined for orbit around Mars! Now, the AMSAT News Service, says that the so-called Phase 5-A satellite could be launched in the 2007 to 2009 timeframe and that it will include subpayloads that would be launched from the main satellite, either to the planet's surface or into the Martian atmosphere.

These devices would transmit scientific data back to the "mother ship." It would then use a repeater to relay the information back to hams on Earth. AMSAT-DL officials say that the 2000 launch of AMSAT-OSCAR 40 showed that the basic satellite design was capable of a trip to Mars.

The AMSAT-DL board of directors has also given a green light to developing a Phase 3-E earth-orbiting satellite. This would be a more traditional amateur bird, offering two-way communication links on amateur bands between 145 MHz and 10 GHz. In addition, it will serve as a testbed for some of the technology needed for the Mars mission.

AMSAT-DL has been the lead AMSAT group on the past three large amateur satellites placed into orbit. This includes AMSAT-OSCAR-10 which is still operating, AMSAT-OSCAR-13 which is no longer in orbit and AMSAT-OSCAR-40.

For the Amateur Radio Newsline, I'm Rich Moseson, W2VU.

--

No launch timetable has been announced for Phase 3 E, but it is expected to be several years before the anticipated launch of the mission to Mars.

information about both missions can be found at:
http://www.amsat-dl.org/p3e/towards-p3e.pdf and
http://www.amsat-dl.org/p5a/p5a-to-mars.pdf (ANS, CQ)

**

RESCUE RADIO: JULY 4th WATER RESCUE ACCOMPLISHED THROUGH HAM RADIO

Its ham radio to the rescue on Thursday, July 4th. This following a water accident involving a teenage girl on Utah's Lake Powell. Roy Neal, K6DUE has the details:

--

STEVE WILLIAMS, K0SRW, REPORTS THAT A TEENAGER . WHO SHALL HERE GO UNNAMED BECAUSE OF HER AGE, WAS RIDING A TUBE BEHIND A RENTED SKI BOAT. THEY WERE GOING FAST UNTIL SHE HIT A WAVE AND SUDDENLY…UNEXPECTEDLY…WENT AIRBORNE. THAT'S USUALLY LOTS OF FUN FOR KIDS BUT THIS TIME THE YOUNG GIRL LANDED THE WRONG WAY. HER NECK HURT. SHE COULD HARDLY MOVE HER NECK AND BACK.

WILLIAMS WANTED TO CALL FOR HELP BUT THE ACCIDENT TOOK PLACE ON LAKE POWELL, WHICH IS A HUGE PLACE…186 MILES LONG WITH ALMOST 2 THOUSAND MILES OF SHORELINE. MAJOR CANYONS, 96 OF THEM, SOME 15 TO 20 MILES LONG, RISE UP BEHIND THE SHORE.

A MARINE RADIO CAME WITH THE HOUSEBOAT THAT WILLIAMS RENTED BUT THEY WERE TOO FAR OUT TO MAKE CONTACT. CELLULAR TELEPHONES ARE ALMOST NON EXISTENT IN THE TERRITORY. SO K0SRW TURNED TO HAM RADIO. WILLIAMS HAD A YAESU 900 AND OUTBACKER ANTENNA ALREADY SET UP. ON 20 METERS, HE HEARD W8VRT, LEN KERSCH, IN ANN ARBOR, MICHIGAN, SEVERAL HUNDRED MILES AWAY.

KERSCH WAS TAKING PART IN A NET, ON 14.178 Mhz. WILLIAMS BROKE IN, EXPLAINED THE SITUATION AND GAVE A PHONE NUMBER FOR THE BULLFROG MARINA, AT LAKE POWELL. KERSH CALLED THE MARINA. THEY CONNECTED HIM WITH THE NATIONAL PARK SERVICE. ANOTHER WILLIAMS…KARL WILLIAMS, KD5AW, IN OKLAHOMA

CITY BROKE IN TO ASSIST BY RELAYING INFORMATION BETWEEN W8VRT AND K0SRW.

ABOUT 25 MINUTES AFTER THE INITIAL CONTACT, A MEDICAL HELICOPTER AND A NATIONAL PARK SERVICE BOAT ARRIVED. THEY DECIDED TO AIRLIFT THE GIRL BY HELICOPTER TO A HOSPITAL AT GRAND JUNCTION, COLORADO. STRANGE TO RELATE, THE PILOT ALSO WAS A HAM…TOM CALDWELL, KC7BPK, WAS AT THE CONTROLS.

THERE WAS NO ROOM FOR THE PARENTS IN THE HELICOPTER. THEY TOOK OFF TO TRAVEL SOME 4 HOURS BY BOAT AND CAR. AS THEY DROVE AND GOT BACK INTO CELL PHONE RANGE, GOOD NEWS WAS WAITING FOR THE ANXIOUS PARENTS. X-RAYS SHOWED THEIR DAUGHTER WAS NORMAL…NO PERMANENT INJURIES. THIS HAM RADIO RESCUE STORY HAD A HAPPY ENDING.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE

--

Williams says he is grateful to all of the hams who assisted in the rescue. Because of them an injured youngster quickly received medical aid in a rather remote part of the USA. (K0SRW)

**

RESCUE RADIO: HAMS READY FOR WASHINGTON TRAIN DERAILMENT

Ham radio was ready but not really needed at a July 29th train derailment just outside of Washington D-C. An AMTRAK liner was enroute from Chicago to Washington when many of the passenger cars left the track near Kensington, Maryland. About 90 people were taken to area hospitals, three reported in critical condition. One news report said that a ham radio communications team was on its way to supply assistance but with no real communications failure, their services were found to be unnecessary. The news story did not mention anyone by name or call sign. (ARNewsline™ from news reports)

**

RADIO LAW: QCWA FILES IN FAVOR OF NEW HAM BANDS BUT SOME MEMBERS SAY THEY SHOULD HAVE BEEN ASKED

The Quarter Century Wireless Association has filed in favor of the ARRL proposal to create new ham radio bands. While most members of the QCWA appear to agree with the FCC filing, there is one group that is taking the Board of Directors to task over how it was done.

Its not because they disagree with the content. Rather, calling themselves the “vocal minority,” these hams are using the QCWA electronic remailer to complain that the board did not send paper or electronic copies of the proposed filing to all members. Also, they say that the board did not individually poll the members for their opinions before writing the QCWA position and sending the paperwork to the FCC.

But outgoing QCWA President Gary Harrison, K0BC, says that the reason it was done this way is simple. It was a matter of time.

In a posting to the QCWA Reflector, Harrison says that there was a limited amount of time to file comments. He also notes that there are only about 300 QCWA members are on the groups electronic mail list. That would mean preparing a paper mailing, sending it out and waiting for members to write back.

Harrison uses QCWA election figures as an example. He says that it takes about two years to complete an election cycle and the organization receives only about 30% return of the ballot. The cost of mailing material out for this election is about $2,000.

What about the organization's magazine called the QCWA Journal? Harrison says that it takes two months to prepare and mail it from the deadline for submitting articles. And be it a paper ballot or an announcement in the Journal, the QCWA would have to allow several months to permit input from the membership. In this case waiting would mean that the QCWA could not file because the commentary cutoff date had passed. (ARNewsline™)

**

CHANGING OF THE GUARD: STEVE MANSFIELD, N1MZA - S.K.

Some rather sad news to report - especially for us here at Newsline. It comes in word from the American Radio Relay League that its Legislative and Public Affairs Manager Steve Mansfield, N1MZA, has died of complications to brain cancer at age 55.

Steve Mansfield came to ARRL service in 1991 as an expert in the area of Public Relations. It did not take long for his bosses at League headquarters to realize his enormous potential as a people person. As a result, the hallowed halls of Washington D.C. soon became his beat and he spent the next eleven years as the point man between the ARRL and numerous political leaders.

ARRL President Emeritus George Wilson, W4OYI, had the opportunity to work with Mansfield. He tells Amateur Radio Newsline that he recalls one incident just before a major convention out in California. There were a lot of very controversial issues on which the League had taken considerable heat. Wilson gave Mansfield the job of searching out all issues and prepare a short "position paper" on each for W4OYI.   The former ARRL president says that Mansfield did such an outstanding job that he had copies sent to all Directors and Vice Directors. The result was what President Wilson called tons of favorable comments, and a real tribute to the dedication of N1MZA.

Mansfield was also seen at many hamfests and conventions. In most cases speaking at public relations sessions hosted either by the ARRL or by us here at Newsline. And that's really where we got to know him as a friend, a college and as an expert in the topic of relating to other people.

Steve Mansfield was first diagnosed with brain cancer in 2000 and had surgery to remove the malignancy. He was doing well until recently when he suffered a series of setbacks. He passed away on Monday July 29th. He is survived by his wife Ellyn daughters Ramona and Elizabeth and the friends he made in and out of ham radio, worldwide. (ARRL, W4OYI, ARNewsline™)

**

CHANGING OF THE GUARD: FATHER MIKE MULLEN, WB2GQW – S.K.

The Reverend Michael Mullen, WB2GQW, a past winner of the ARRL International Humanitarian Award, became a Silent Key in June. "Father Mike" was a professor and past chairman of the humanities department at St. John's University in New York. He was best known in amateur radio for his involvement with IMRA, the International Mission Radio Association. IMRA maintaines lines of communication using amateur radio for missionaries. It also inter-connects various humanitarian agencies over the air after disasters.

According to the New York Daily News, in addition to his ARRL International Humanitarian Award, Father Mike received the St. John's University Presidential Medal and was listed in the
international edition of "Who's Who in Education." He was 87 at the time
of
his death. (CQ, NY Daily News)

**

NAMES IN THE NEWS: A NEW BOOK BY N6NHG

Former computer hacker Kevin Mitnick, N6NHG, has turned author. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

Kevin Mitnick, N6NHG, Mitnick is the California ham whose license renewal application has been designated for hearing by the FCC. This, based on his conviction for hacking. And now according to news reports, he has written a soon to be released book on computer hacking and -- more important -- how to prevent being hacked.

According to the reports, Mitnick's book -- The Art of Deception -- is a novel that describes more than a dozen scenarios where hackers dupe computer network administrators into divulging passwords, encryption keys and other security details. Mitnick claims that its all fiction with any personal details having been kept out of the book which reportedly uses fictitious names of hackers, victims and companies.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

Earlier this year the FCC designated his application to renew his Amateur licenses for a public hearing. The FCC contends that Mitnick may no longer possess the requisite requirements to remain a Commission licensee. (Published reports)

**

CONVENTIONS: HUNTSVILLE HAMFEST

Two conventions on almost opposite sides of the country are taking place the weekend of the 17th and 18th of August. In Huntsville Alabama, the Huntsville Hamfest takes place at the Von Braun Center's South Hall right across the street from the Huntsville Hilton Hotel. Since the first Huntsville Hamfest in 1981, this event has grown to the point where the Amateur Radio manufacturers and dealers consider it to be one of the seven major hamfests in the country, pulling a gate of between 5000 to 6000 every year.

We at Amateur Radio Newsline have presented our own Young Ham of the Year Award at the Huntsville Hamfest since 1993. 2002 is no exception. So please join us at 2:00 P.M. Central time on Saturday August 17th as we, our corporate underwriters Vertex Standard and CQ Magazine along with the people of Huntsville honor 17 year of Josh Abramowicz, KB3GWY as the 2002 Amateur Radio Newsline Young Ham of the Year. More information about the Huntsville Hamfest is in cyberspace at www.hamfest.org. (Huntsville Hamfest)

**

CONVENTIONS: ARRL SW DIVISION IN SAN DIEGO

And August 16th to the 18th will se the ARRL Southwestern Division show at the California Center of the Arts in Escondido. The scheduled Banquet speaker will be Riley Hollingsworth K4ZDH. Also on hand will be ARRL President Jim Haynie W5JBP, Big Project Coordinator Jerry Hill, along with Division Director Art Goddard W6XD, and Vice Director Tuck Miller NZ6T. More information is on the convention web site at http://sd2002.hamcon.net. (HAM-CON)

**

CONVENTIONS: HUNTINGTON HAMFEST

And a week earlier on August 10th, the Tri State Amateur Radio Association will host the Huntington, West Virginia Hamfest. Its at the Veterans Memorial Field House, 2590 Fifth Avenue in Huntington from 8:30 AM to 2:30

P-M. Talk in on the 146.76 repeater and V-E administered ham radio exams will also be available. For further information contact Phil Beckett by e-mail- to ab8me@hotmail.com (N8TMW)

**

**

HAMFESTS: TRW SWAP MEET FOR SEPTEMBER CANCELED

If you are planning to travel to Los Angeles this September to attend the famed TRW Swap Meet, choose some other month. This is because the giant swap-feast has been canceled because a corporate event will be held at the Space Park Facility on Saturday, September 28th.

Only September is canceled. There will be a TRW Swap Meet the last Saturday of the month in August and in October, November and December.

The TRW Swap Meet is famous and draws attendance from across the nation. For more information visit http://w6trw.com on the world wide web. (Via e-mail from TRW A.R.C.)

**

SCIENCE PAGE: THE MAGNETIC NORTH POLE IS ON THE MOVE

The Magnetic North Pole could soon abandon Canada, migrate north of Alaska and eventually wind up in Russia. So says one scientist. Amateur Radio Newsline’s Bill Pasternak, WA6ITF, reports on the future of the pole.

--

The e-newsletter Science Today tells of Larry Newitt. Newitt is a researcher with the Geological Survey of Canada. And Newitt says that the magnetic pole is on the move.

The researcher says that the pole, which has steadily drifted for decades, has picked up speed in recent years. He says that at its current speed, it could exit Canadian territory as soon as 2004. And, says Newitt, if the pole follows its present course, it will pass north of Alaska and arrive in Siberia in a half century.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, Los Angeles.

--

If you are worried that you may soon have to trade in your old compass for a G-P-S to know where you are, don’t. Researcher Newitt cautions that such predictions could be wrong. (Science Today)

**

INTERNATIONAL - BRAZIL: A NEW LF BAND ON ITS WAY

According to Brazilian amateur PY3CRX the Brazilian licensing authority, ANATEL, has agreed that the 135.7 to 137.8kHz band can be allocated to radio amateurs in that nation on a secondary basis. No date was mentioned for the new band's introduction but PY3CRX adds that the band is, or will be, also available in Paraguay and Uruguay as well. (GB2RS)

**

INTERNATIONAL- CANADA: VY2BP NEW RAC AD

Radio Amateurs of Canada reports that Bill Perry, VY2BP, has been appointed as an Assistant Director for the R-A-C Atlantic Region. Perry will complete the unexpired term of Fred Burke, VY2FB, who recently resigned the position because of family commitments. (RAC)

**

INTERNATIONAL EAST TIMOR: NEW CALL SIGN BLOCK ANNOUNCED

The International Telecommunications Union says that the 4WA to 4WZ prefix block will go to the United Nations Territory Administration of East Timor for as long as it exists. United Nations stations within East Timor will be assigned 4U prefixes. The official U N Club station will get 4U1ET. All other amateurs will use the 4W6 prefix. Those residing in East Timor less than one year will sign 4W6 followed by their home call. People staying beyond one year will be assigned a permanent 4W6 call. And yes, CEPT licenses are accepted. (GB2RS, Q-News)

**

DX

In D-X, the UK-lead youngsters' DXpedition to the Maldives should be on the air as 8Q7ZZ until the 11th of August. The expedition is being lead by 18-year old Mark Haynes, M0DXR. Other operators include 15-year old Robert Morgan, M0TTT, as well as young amateurs from Germany and Spain. 8Q7ZZ will be running up to three stations simultaneously, all with beam antennas and up to 400 watts power out. (RSGB)

Meantime, four French operators are in Benin and active as TY7Z, TY9F, TY4DX and TY6FB until the 14th of August. If you make contact with either operation Q-S-L as directed on the air. (QRZ DX)

**

THAT FINAL ITEM: A SPECIAL HAM RADIO PRESENTATION

And finally this week:
--
“Good afternoon to everybody here. We have a lot of Amateur Radio operators and we have a lot of guests aboard the Queen Mary. And we are here for a very short ceremony to commemorate the 23rd anniversary of W6RO.”

--

That was Bob Heil, K9EID, on Saturday, July 27th, talking to a crowd assembled in the Wireless Museum next door to the Queen Mary’s radio room. A radio room that for the past 23 years has been the home of Amateur Radio Station W6RO. And to commemorate this milestone, Bob’s company, Heil Sound, donated a half dozen custom made Classic series microphones adorned with the W6RO call sign to the station. These retro look microphones are very similar to the RCA studio mic’s of the 1930’s. Famed rock musician Joe Walsh, WB6ACU, had the honor of making the actual presentation:

--

Joe Walsh: “These Classic microphones are presented to the Queen Mary amateur Radio Station, W6RO, celebrating the 23rd year of continuous operation provided by the Associated Radio Amateurs of Long Beach California, present by Bob Heil, K9EID, and Joe Walsh, WB6ACU, on July 27, 2002. And we wish you continued success with the station and here you go.”

Nate Brigtman: “Thank you very much.”

--

Accepting the mics was Nate Brightman, K6OSC, who was the man who conceived the idea of a ham station on the Queen Mary. He was accompanied b the current president of the club, Ray Rittenhouse, KF6WZN. Rittenhouse has a surprise for K9EID:

--
Ray Rittenhouse: “We appreciate this very much Bob, and from our club to you is a certificate of our appreciation thanking you for those microphones we are now putting in W6RO”
--

Then it was Nate Brightman’s turn. He told the crowd a bit about the operation of W-6-R-O, and what those who sit at the transmitters get as a token of appreciation for taking the time to operate:

--
Brightman here: ““Those amateurs who come by to visit W6RO aboard the Queen Mary, should they operate the station, we will mail to them a special certificate designating that they had the honor of operating W6RO aboard the Queen Mary.”
--

And when it was all over Bob Heil ended the presentation with a bit of a poem:

--
Heil: Nate. Thanks for having us today. And Ray, we appreciate all of your efforts for the club. And we will be seeing you a little high, a little low. But we’ll find you somewhere from W6RO. (Applause)
--

Attending the ceremony, were numerous local ham radio operators from the Los Angeles area. This included Vertex-Standard’s Chip Margelli, K7JA and film maker Dave Bell W6AQ. The ARRL was represented by Los Angeles Section Manager Phineas Icenbice, W6BF. You can hear the complete presentation as this weeks Newsline Extra. You will find it as an MP3 file on our F-T-P page only a click away at www.arnewsline.org. (ARNewsline™)

Portable digital storage oscilloscope, in EXCELLENT condition. Operated by "AA" batteries or AC adaptor included. Can also be hooked up to your PC with included computer interface. Comes with manual, 2 probes, batteries, zippered carrying case. Probes and scope are as new, unit was very seldom used.

Brand new price was $1200, but will sacrifice for $350, plus actual shipping charges from 94612.

The specifications for this scope is very similar to the current model P-3850, at Protek's website below. Its also identical in appearance to the P-3850 which sells for $1350.

Write reviews of amateur radio software, books, and consumer products and keep them for your own use.

I am the editor of a review web site. I don't have the time to write all the reviews to expand the web site.

Here is the deal.

I will get you virtually any software program (Mac, PC or Unix/Linux) for free. The same goes for any consumer product costing less than $300. You can go to our web site and request any product or book. The books are sent directly to you. The software & consumer products come to us and we reship them to you.

You agree to write and post a brief review and you keep the software, consumer products or books for your own use.

There is a $29 for our six month review club member fee. But YOU DON'T PAY THIS FEE UNTIL YOU RECEIVE YOUR REVIEW PRODUCTS THAT ARE WORTH THREE TIMES YOUR FEE. We have been doing this for many years, so we can afford to make this offer where you pay NO FEES until you receive your products.

We are looking for a few dependable reviewers who will write reviews in exchange for keeping these products.

If you are interested, please send me an email to johnwesley2@bellsouth.net with the words NEW REVIEWER in the message subject line and your name and address in the message body. I will send you complete information and a contract that you agree to write and post reviews.

Thanks

John Wesley

Dear OMs:

I'm looking for a late '30s early '40s old radio receiver a tube EBL/1 in red.

As long as I know is an European tube red cloured with 8 points for connection.

If you have any information or store, shop or place where to find it I will apreciate that information.

Not being a US Ham I was basing my point in our Basic license and we can build anything for Ham Radio except transmitters and amps and are held to under 250 watts. With the ease of the basic license I can see why. I was under the impression that your Tec class was about the same.

He is looking for something for his kid and 2 meters is the way to get the interest going. I was only 13 and working on my ticket so my dad went out and got me a Kenwood TS-520 with ex. VFO and ex. speaker for about $1000.00 to get me going. I lost interest a while latter and the radio spent more time on 11 meters then on the Ham bands. A little 2 meter rig would have been better as I already had a Drake SSR-1 receiver to do HF. 12 years after I got the 520 I finally got my ticket. I sold the 520 when I was 17 for about $100.00 as that was all it was worth after the general coverage transceivers got in to full swing. No question that they will get into a local club and most club actives happen on 2 meters, parade control, local nets and swap and shops. That is why I recommended a 2 meter HT also you can get one for less then $150.00 and still do world wide with the help of IRLP. If he does lose interest then he should be able to sell the HT off for what he paid for it as that they don't seem to be depreciating that much.

One of the problems on the internet (especially when it comes to ham radio that is world wide) is that one is never sure which country the question is comming from. Differant rules for each country.

I can't go back much over 30 years in ham radio but in the US any license class can build whatever he wants to (transmitters and amplifiers included). I think it is (was) to encourage learning.   The Novice (lowest of the low band license which is not issued anymore) used to be limiated to 75 watts input but has been changed to a somewhat higher power (can't recall without looking if it is 200 or 250 watts and not sure if input or output). That was done about 10 or 15 years ago as many of the popular transceivers were in the 100 watt output class and did not have an easy way to measure the power. Even they could build their own transmiters.

The US Tech license is no differant from any other license except they must operate above 50 MHz.   With the code endorsement they can operate all the Novice frequencies on the low bands (no voice modes) and a small portion of 10 meters on ssb.

Amateur Radio Newsline™ Report 1304 August 9th, 2002

Amateur Radio Newsline report number 1304 with a release date of Friday, August 9th 2002 to follow in 5-4-3-2-1.

The following is a QST. U.K. hams take to 5 MHz in a big experiment. Find out the details on Amateur Radio Newsline report number 1304 coming your way right now.

(Billboard Cart Here)

**

ON THE AIR: BIG UK 5MHZ EXPERIMENT

If you tune around 5 MHz and hear what sounds like ham radio QSO's, your ears are not playing tricks. A major study of 5 MHz propagation has begun in Great Britain and some hams are already on the air. Jeramy Boot, G4NJH, reports from Nottingham in the U.K.:

--

The 5 Mhz experiment has begun. The Radio Society of Great Britain has announced that permission has been granted by the Ministry of Defence and the Radiocommunications Agency for the allocation of five spot frequencies in the range of 5250 to 5450kHz. The frequencies will be made avbailable in the form of a 3 kilohertz bandwidth channel by way of a Notice of Variation to the UK Amateur License. Because it is a controlled experiment applicants are required to report their findings and results to the RSGB.

The purpose of the experiment is to carry out propagation and antenna investigations aimed at improving the understanding of Near Zenithal Radiation or NVIS - Near Vertical-Incidence Skywave - communications via the ionosphere. The frequencies assigned are 5260, 5280, 5290, 5400 and 5405kHz. It's expected that this experiment will run for about 4 years.

Jeramy Boot, G4NJH.

--

Here in the United States, Charles Harpole, K4VUD, one of the permitted operators of the American WA2XSY 5 MHz-band test stations invites U-K hams to contact him to set up a sked. The 5 point 260 MHz channel would be the best frequency for him. He is available for all times and days until the 20th of August and his e-mail is k4vud@hotmail.com (GB2RS)

**

ENFORCEMENT: FIVE LICENSES CANCELED BY FCC

Five hams who participated in a September 2001 testing session in Yucaipa California and who declined to be retested have lost their ham radio licenses. The FCC's Riley Hollingsworth says that in this case it was the VEC who brought the matter to his agency:

--
Hollingsworth: "Now the W5YI-VEC really did its homework on this one. They picked up some comments and complaints on an Internet News Group about the

examination session; did a little homework and further research and found some very good reasons to refer the matter to us.”

--

On April 30, the FCC wrote all five requiring them to re-take their Amateur Examinations before June 30th. All five failed to appear. Again the FCC’s Riley Hollingsworth:

--

Hollingsworth: “Those licensees were Eddie Bartolome - Extra Class N6YAG of Los Angeles; Camito Lopez KG6GJC a Technician of Los Angeles; Marcial Rivas - General Class KG6HCP of Salem Oregon; Manuel M. Vega, KG6GSP - General class of Anaheim California and Marcelino Llanes, KG6HBR of Oxnard California.”

--

Hollingsworth adds that the FCC is continuing its investigation of other examinations given by the Volunteer Examination team involved in the September 1st 2001 session in Yucaipa. Also that his office really appreciates the vigilance of the W5YI-VEC. (FCC, RAIN)

**

ENFORCEMENT: FCC MAY RETURN FORMER KV4FZ TO THE AIRWAVES

An ex-ham from the US Virgin Islands who was forced off the air a year and a half ago by the FCC may soon be back on, courtesy of the FCC. This as the agency indicates that it may act to reinstate the amateur license of Herbert L. Schoenbohm, the former KV4FZ. Amateur Radio Newsline’s David Black, KB4KCH, has been following this story and has the latest:

--

Herbert L. Schoenbohm's name shows up a lot in FCC records. He's the former ham who used to hold the callsign KV4FZ. That was before he lost his license.

In December, 1992, Schoenbohm was convicted of fraudulently using a counterfeit access device to obtain long distance telephone service. He was sentenced to two months of house arrest, two years probation and fined $5000. That left the FCC feeling that a felony conviction disqualified Schoenbohm from continuing as a Commission Licensee.

Two years later, Schoenbohm filed with the Commission to renew his amateur radio license. The Commission answered -- but not with what he wanted to hear; instead, the FCC designated his application for a hearing. Two encounters took place--one in 1995, the other in '97. At that point, the Commission told Schoenbohm he should no longer be allowed to have an FCC license.

He was allowed to operate until he exhausted all avenues of appeal. That happened in October of 2000. In January, 2001, Schoenbohm ceased on-air operations.

Before leaving the airwaves, 'though, Schoenbohm vowed that he would one day return to the airwaves as a licensed radio amateur. That day may be soon--based on findings presented at an FCC Administrative Law hearing earlier this year.

The hearing was held to determine if Schoenbohm now meets the requirements to once again become a Commission license holder in the Amateur Radio Service. The finding is complex and covers nearly two dozen pages. But it appears that the government may be ready to give Schoenbohm a second chance as a licensed ham.

The Commission says in part there is sufficient evidence in the record to support a finding that Schoenbohm has rehabilitated himself. The Commission notes that -- based on the evidence --it appears unlikely he would engage in any future misconduct. The Commission's Enforcement Bureau Investigations and Hearings Division endorses Schoenbohm's return to the amateur radio airwaves.

Schoenbohm took and passed a new exam in March, 2001. But the Commission again threw in a delay, designating his application for a hearing on the basis of character issues. This is the application that an Administrative Law Judge has been reviewing. Now that the recommendations are in, the Administrative law judge could issue a final opinion and recommendation within the next few months. That means Herbert Schoenbohm could possible be on the air again sometime this year.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.
--

In the end, it is going to be up to the Commission to make a final resolution as to whether or not the former KV4FZ returns to ham radio. Nobody can predict what that decision will be. And if he is permitted to return, will it be with his old KV4FZ call sign? (ARNewsline™ from FCC Publiic Files)

RESCUE RADIO: COMMUNICATIONS TECHNOLOGY HELPS SAVE KIDNAPPED GIRLS

Two kidnapped California teenagers are alive thanks in part to a newly developed law enforcement communications technology. Mert Garlick, N6AWE, has the details:

--
It happened on Thursday August 1st when two teenage girls from the Quartz Hill area of Southern California were abducted at gunpoint. Using the newly established AMBER child abduction alert system, the names of the teens and a description of the car they were in was immediately distributed to law

enforcement agencies and broadcast outlets statewide. Shortly thereafter the California Transportation Authority was displaying information on it’s 316 electronic signs on freeways.

Sheriff's deputies in Kern County soon received several calls from people who saw the white Ford S-U-V. A sheriff's helicopter crew used the information to direct a ground unit that made the felony arrest stop. When he resisted and brandished a weapon, deputies shot and killed Roy Dean Ratliff and freed the girls.

The rescue took place only six days after Governor Gray Davis directed the installation of the AMBER system. AMBER uses a combination of two-way radio, fax, e-mail and other communications technology to quickly spread word when a child is abducted. It is based on a program developed by Dallas-area broadcasters and named in memory of nine year-old Amber Hagerman who was kidnapped and murdered in 1996.

In this latest case it took less than 4 hours to get the AMBER alert on the two missing girls circulated to the road signs. California’s Governor Davis says that his states AMBER system will now be refined to make it react more swiftly.

For the Amateur Radio Newsline, Mert Garlick, N6AWE.
--

Today, there are forty-one AMBER Alert programs across the country. The system is credited with safely recovering at least seventeen children since 1997. (Published news reports)

**

ENFORCEMENT: PLEASE FIX THE INTERFERENCE

A pair of utility companies have received letters from the FCC regarding unresolved interference complaints from area amateurs. According to the W5YI Report Lakeland Electric Company in Florida and Commonwealth Edison in Illinois both were sent notes reminding them of their responsibilities to prevent interference to radio stations including radio amateurs. The letters gave the electric companies 90 days to either resolve the problems or contact the FCC with a specific timetable for making the fix. (FCC from W5YI Report)

**

HAM RADIO POLITICS: NEW DIRECTORS FOR THE NFCC

Turning to the ham radio political arena, word that Ken Chilton, KA1TIH; Alex Harvilchuck, N3NMN and Vincent Bardsley, KB3OM have been elected to the Board of Directors of the National Frequency Coordination Council. They replace outgoing Directors Dick Isely, W9GIG, Owen Wormser, K6LEW, and Dave Baughn, KX4I, who helped form the NFCC at a meeting in St. Charles Missouri back in 1995.

Chilton, Havilchuck and Bardsley also join Nels Harvey, WA9JOB and Clay Freinwald, K7CR as the duly constituted National Frequency Coordinators' Board.

This for the twelve month period starting on September 1st. (ARNewsline™)

**

HAM RADIO POLITICS: NEW SACRAMENTO SM IS OLD SACRAMENTO SM

California’s former Sacramento Valley ARRL Section Manager has become the new Sacramento Valley Section Manager following the resignation of the current Sacramento Valley Section Manager. Confused? Well, here’s what happened.

According to an ARRL Bulletin, Jettie Hill, W6RFF, of Roseville, California, has been appointed to succeed Jerry Boyd, K6BZ, as the Sacramento Valley Section Manager. This is because Boyd is moving out of the section.

Boyd was appointed in 2000 to replace Hill. Hill continued to serve the section as the regions Affiliated Club Coordinator and as an Official Relay Station. W6RFF previously served as Santa Clara Valley Section Communications Manager from 1978 until 1982 and as ARRL Pacific Division Vice Director in 1982 and 1983. The appointment of Hill, who had previously served for more than 10 years as Sacramento Valley S-M became effective on August 1st. Got that? (ARRL)

**

FUTURE TECHNOLOGY: HIGH TECH WORKERS NEEDED

Still in California, word that lack of qualified workers is costing Silicon Valley billions of dollars annually. The management consulting firm A.T. Kearney says that this is threatening the regions position as a global high technology center. The region's shortage of high-tech workers means that one in three jobs requires special recruitment efforts, or goes unfilled, leading to a loss of over $3 billion a year. (ProPeople.com)

**

RADIO REGULATIONS: PERMANENT CELL NUMBERS ON HOLD

Mobile phone users who want to keep their numbers after switching wireless companies will have to wait until late next year for that option. This after the Federal Communications Commission gives cellular phone companies until November of 2003 to offer customers the choice.

The new date, one year later than the previous deadline to implement the service. It is the third extension granted by the FCC. Most wireless companies oppose the idea, arguing it would cost billions of dollars and drain resources needed to improve and lower the cost of wireless services. (FCC)

**

WITH THE HANDI-HAMS: EXTRA CLASS MANUAL IN AUDIO

The Handi-Hams have announced that the latest ARRL Extra Class License Manual is now available to it’s blind members in adapted audio format. At the present time Handi Hams only digital media available but the audio is being re-mastered onto tape. When the cassette version is available Handi Hams will let us know so that we can let you know. Meantime keep an eye at Book and Tape Catalog area at www.handiham.org for updates. (Handi Hams)

THE SUPPORT FUND REPORT WITH ANDY JAREMA, N6TCQ

Its time for a report from the Amateur Radio Newsline Support Fund. Here's our Administrator -- Andy Jarema, N6TCQ:

--

There are two items to cover this week. I'll start with our poll regarding credit cards. Three weeks ago we asked those interested in supporting Amateur radio Newsline using a credit card to write the single word YES in the subject line of an e-mail and send it to us. We have tallied the results and there were only 17 who said yes. And of the 17, all but one said that only a Pay Pal account was acceptable to them.

Well, statistically speaking, you don't have to know how to do linear regression to know that 17 people out of the 10's of thousands who listen in each week is not a very good response. What it says is that 17 people have Pay Pal access and would use it to help support Amateur Radio Newsline. Even so, we looked into creating a Pay Pal service for those who wanted to use it. Without wasting a lot of time, suffice it to say that the costs involved versus the return would not warrant the expenditure. So at present the credit card issue is dead. For now at least, the Support Fund will remain as it always has. Just the P.O. Box where donations can be sent. Get a pencil and paper ready. I'll give it in a few moments.

The other item I want to touch on briefly is the current state of the checking account. Thanks to your generosity, we made it through June and July. What that means is the bills from May were paid in early June and those from June went out on schedule in July. Now it's early August. The July bills have come due, unfortunately at the same time that our folks are off to Huntsville, Alabama to present the 2002 Young Ham of the Year Award. So that you get a better understanding of the costs involved, I've done a rough breakdown.

First of all, our corporate underwriters Vertex Standard and C-Q Magazine cover almost all the costs of the young person selected for the award. They pay their airfare. They pay their lodging. Vertex-Standard provides an additional gift of Yaesu brand ham radio gear. C-Q treats the winner to a week at Spacecamp. When you add that up, it's probably a gift package with a retail price tag of close to $5000.

Obviously, they do their part and we have to do ours. It costs about $300 a year for a round trip ticket to get one of our people from Los Angeles to Huntsville. Actually, we have our people fly to Birmingham and drive up to Huntsville because this saves quite a bit of money. Yes, it takes them out of their way and adds a few hours of travel time. But the savings in airfare make this added time worthwhile.

The wonderful folks at the Huntsville Hamfest provide us with a free room. We do have to pay our people’s expenses like food, hotel, telephone service and a rental car when necessary. We also pay for the plaque presented to the winner and for the mini-banquet we hold for him or her on the Friday night prior to the actual Saturday presentation. The total this year will be somewhere between $1000 to $1100. So we need to raise that in addition to our normal $800 to $1000 it costs monthly to keep the Amateur Radio Newsline newscasts coming your way. And that's where you come in.

Amateur Radio Newsline is a federal 501 (C) (3) not for profit corporation. Donations to it are tax deductible. The address – you’ve heard it before - is Post Office Box 660937, Arcadia California. Our Zipcode is 91066.

OK. ‘Nuf said. But I’ll be back next week with the latest thank-you list. For now, from Arcadia, in sunny Southern California's San Gabriel Valley, I'm Andy Jarema, N6TCQ.
--

If you missed the address given by Andy it will repeated at the end of this weeks newscast. (Newsline Support Fund)

**

HAM RADIO IN SPACE: KD5MDT REPLACES KC5FVF ON ISS EXPEDITION 6 CREW

Astronaut Don Pettit, KD5MDT, has been named to replace Don Thomas, KC5FVF, as a member of the Expedition 6 International Space Station crew. According to the ARRL Letter, Pettit had been training as backup flight engineer for the increment six team and was ready to step in.

NASA said the reassignment resulted from a medical issue that affects Thomas' long-duration space flight qualifications. According to Astronaut Office Chief Charlie Precourt, KB5YSQ, the demanding nature of long-term space flight requires a conservative approach to crew health issues, especially this early in the program. Pettit will join Expedition 6 Commander Kenneth Bowersox, KD5JBP, and Russian cosmonaut Nikolai Budarin, RV3DB. (ARRL Letter)

**

HAM RADIO IN SPACE: THE METEORS ARE COMING

Weak Signal operators -- listen up. The Perseid meteors are on their way.

Lee Wical, KH6BZF, says over the QCWA remailer that from midnight to dawn, on Monday August 12th and Tuesday August 13th about 60 to 70 meteors per hour will enter Earth's atmosphere. This particular meteor shower is created by the Earth passing through the debris field left from the Swift-Tuttle comet. The grain-like particles enter Earth's atmosphere, burn up and create what most people call shooting stars.

The Perseid Meteor shower is not expected to be as spectacular as the Leonid Meteor shower that occurs each November. But, if viewing is good, people will not be disappointed. And if the ionized tails are good, ham radio meteor scatter D-Xers and WSJT users will be happy as well. (KH6BZF)

**

INTERNATIONAL - UK: LONG WAVE GOODBYE

As predicted by Media Network, the loss-making sports station TEAMtalk 252, which broadcast to the UK on 252 kHz Long Wave from a transmitter in Ireland, has closed down. This, after less than 6 months on the air. The station ceased broadcasting at 1300 UTC on July 31st. (Media Network)

**

INTERNATIONAL-CANADA: NEW RAC QUEBEC SM

Claude Paquet, VE2OCP has been elected as Radio Amateurs of Canada Section Manager for Quebec. This, for a two year term that will begin on November 1st. Paquet ran unopposed, eliminating the need for a balloted election. He has also agreed to complete the term of Richard Desaulniers, VE2DX who resigned for personal and professional reasons on August 1st. (RAC)

**

DX

In D-X, G0TQJ he has now gone QRT from Afghanistan where he operate slash YA. During his say in Kabul Chris made 1950 QSOs on SSB and another 850 on RTTY. He is getting his QSL cards printed. He has also sent his documentation to the ARRL DXCC desk for approval. (GB2RS)

And the FISTS newsletter reports on the apparent pirating of callsign ZD7CW. The pirate is using CW and not very active. In fact, he was last heard in November of 2001. But the real ZD7CW has been inactive for several years. (Q-News)

**

THAT FINAL ITEM: A TRUE CAPTIVE AUDIENCE!

And finally this week the story of an interesting call sign operating from a rather unusual place in Ireland. Here’s Q-News Graham Kemp, VK4BB;

--

From our files, the story of a captive audience. A permanent amateur Radio Station with the call sign EI0CRM -- you heard right -- C-R-M -- “crim” --

EI0CRM is being set up in of all places the radio museum of the Cork City jail.

Cork City jail opened for business in 1824 and was used as a prison until 1923. When Radio Erin was expanding in the mid 1920’s, it was located in this jail. Its call sign was 6CK.

The broadcasting studio is now fully restored and a fine display of radio artifacts are on permanent display. Have a listen out for EI0CRM
--

Talk about a QSL card that you may want to keep under lock and key. (Q-News)

**

My son has been very interested in international contacts. He was very thrilled to hear Radio Japan on shortwave. I think that he would be even more excited to communicate with someone in another country. Propagation on 2 meters just won't do that from central California.

I am trying to avoid the US$1000 shack that gets used for three months and then gathers dust. I think that he will use 2 meters and when he learns enough to pass the technician test we'll get one.

He has been learning Morse code and I'd like to be able to set up a station for him, if he gets up to 5 wpm.

While the transceiver is a big part of the cost of a station, I'm sure there are other costs. What else do I need to consider? Key? Keyer? SWR meter? Antenna tuner? At this price range US$25 is 10% of the total cost and can't be ignored.

WG, thank you for sharing your story.

Peter A. Bonucci

WG wrote:

> Not being a US Ham I was basing my point in our Basic license and we can build anything for Ham Radio except transmitters and amps and are held to under 250 watts. With the ease of the basic license I can see why. I was under the impression that your Tec class was about the same.
>
> He is looking for something for his kid and 2 meters is the way to get the interest going. I was only 13 and working on my ticket so my dad went out and got me a Kenwood TS-520 with ex. VFO and ex. speaker for about $1000.00 to get me going. I lost interest a while latter and the radio spent more time on 11 meters then on the Ham bands. A little 2 meter rig would have been better as I already had a Drake SSR-1 receiver to do HF. 12 years after I got the 520 I finally got my ticket. I sold the 520 when I was 17 for

It can be difficult to set up a station for your budget. You might find some older transceivers in that price range. Maybe an old Yaesu 101 or Kenwood . You should allow about $ 100 for an antenna tuner with built in

SWR meter. You may find used ones for less. Then about $ 20 to $ 30 for 100 feet or so of RG-8x coax (good price vers performance). You may be able to locate some rg-6 coax that is used in the cable tv or Direct TV instulations for free. It is 75 ohm stuff but don't worry about that. Hopefully you can find about 130 feet of # 12 to # 16 wire for an antenna for low cost at the local hardwear store such as Home Depot or Lowes. Some rigs have keyers built in but you will need a $ 50 or so paddle to use with that. Not sure what a standard key with a good feel to it will cost now. If the rig does not have a built in power supply then you are looking at another $ 100 or so. You can get a 2 meter rig new for not too much and you will need a power supply for that , so might as well get one big enough (atleast 20 amps and maybe 30)for a low band rig while you are at it.

It is difficult to get started for under $ 400 to $ 500 with a good station. I know it can be done if you look long and hard enough but that should be about the minimum buject for starters and hope you cn find the stuff for less.

Peter -

Here are some web sites that I would recommend (Amateur 101)

Local amateur clubs - ARRL search engine
http://www.arrl.org/FandES/field/club/clubsearch.phtml

The Art of Kitbuilding
http://ww2.netnitco.net/users/wt9w/kit%20building.html

Elecraft Kits
http://www.elecraft.com

Basic Soldering Guide
http://www.epemag.wimborne.co.uk/solderfaq.htm

Basic Electronics (okay its for Car Audio - but its same content !)
http://www.eatel.net/~amptech/elecdisc/caraudio.htm

Web EE (for fun and ideas)
http://www.web-ee.com/

Homebrew project organization
http://www.seits.org/features/homebrew.htm

IF you need a good solder station, drop me an separate e-mail. I have been repairing for Weller TCP stations for over 25 years - and would be happy to get you a quality tool (my Elmer service to new amateurs).
Q: Why is a solder station "better" than a non-temp controlled (unregulated) soldering iron?
A: A non-temp controlled iron *continues* to increase in tip temperature the longer it's plugged in -- up to 1100 degrees-F ! A solder station controls and maintains an exact tip temperature. In the case of 700 degree-F tips, you'll be soldering at a tip temperature of 400 degrees *less* than a non-temp controlled iron. A lower tip temperature with good technique, translates to better joints with less chance of damage to sensitive components -- IC's, etc. (The 700 degree-F Weller tips will *not* exceed 710 degrees-F.)

Q: Which tips do I use -- 700 or 800 degree-F ?
A: The 700 degree-F tips are typically recommended for single layer and double-sided PC boards -- even four-layer PC boards. This includes practically everything in the world of amateur radio kits & homebrew. The most common tip for the WTCPT station is the Weller PTA-7 (1/16" screwdriver tip). You might also want a PTD-7 for much bigger pads/lugs, and a PTJ-7 for longer-reach work -- or <gasp> rework ;) If you want to try surface mount, pick up a PTS-7 for a start. The 800 degree-F tips are recommended for serious multi-layer boards -- 4 to 8 layer PC boards -- *not* typically used for ham radio kits ;)

It is good to hear that your son is very interested in the hobby. He can go as far as he wants with this hobby. I must be clear on one thing I was not talking about propagation on 2 meters but using a relatively new technology that is set up on many repeaters around the world it is called The Internet Radio Linking Project or IRLP for short http://www.irlp.net/ . It was designed by David Cameron VE7LTD. You use a 2 meter radio to go in and out of the repeter and the internet is used as a backbone to link the repeaters world wide. I have worked Australia, the UK and many places in the US and Canada all from my HT. They even have a young peoples net on I think Friday nights on reflector 2 in Denver Colorado that is for young hams your sons age from all over the world. Below is a list of repeaters in California that are connected and you can see if their is one near you.

WA6SUP Sacramento CA, 302 WA6LCN Marinwood CA, 303 KB6THO Pasadena CA, 304 WA6JFK Los Angeles CA, 307 WA6TWF Santiago Peak - Orange Cty CA, 309 KB6JAG Hemet CA, 310 N6KNW Santa Clarita CA, 311 K6IOK Auburn CA, 312 KD6YYJ San Jose CA, 314 KE6DGM Norwalk CA, 315 WA6RQD Oceanside CA, 316 WA6RQD Oceanside CA, 317 WD6AWP Huntington Beach CA, 318 W0GFQ Palm Springs CA, 319 WD8CIK Hollywood CA, 334 WR6JPL Pasadena CA, 341 KD6GDB Santa Monica CA, 343 KE6WUK Sunset Ridge / Los Angeles CA, 346 WA6LA Palos Verdes I [WALA] CA, 347 N6ICW Sacramento CA, 348 WA6LA Palos Verdes II [WALA] CA, 349 K6JSI San Diego CA, 350 K6JSI San Diego - WIN System CA, 351 WB6EGR Santa Clarita CA, 352 WB6EGR Burbank CA, 353 K6JXY San Marcos CA, 354 W6DXX Palm Springs CA, 355 VE6RGP San Diego CA, 356 WB6HII Eureka CA, 357 N7HQZ Ferndale CA, 361 K6UB Saratoga CA, REF925 362 KU6V Fremont CA, 363 KG6EVO Tahoe City CA, 364 WA6VPL Lompoc [WALA] CA, 365 KE6PCV Los Angeles CA, 367 N6JVH North Hills CA, 369 N6SEX Sacramento CA, 376 N6JVH Los Angeles CA, 378 WR6HMB Half Moon Bay CA, 383 WB5EKU Los Angeles CA, 384 K6IXA Atwater CA, KJ6W 386 WA7SPY Sacramento CA, 387 K6KCP Sacramento CA, 388 K6RTL Sacramento CA, 396 N6SEX Sacramento CA, 469 KF6JEE Woodcrest CA, 481 KF6FM Riverside CA, 504 AD6SJ Oakley CA, 557 WB6GVO San Luis Obispo CA, 561 KF6CPI Los Angeles CA, 564 K6RGR Fresno CA, 575 W6KAP Volcano CA, 582 KG6AHV Fairfax CA, 585 KJ6W Palmdale CA, 590 WB9RNW San Fernando Valley CA, 703 W6DXX Rincon Beach CA, 717 W6EKZ Pomona CA, 733 N6RDE Cameron Park CA, 737 KJ6VU San Jose CA, 740

N6NMZ Applegate CA, 747 K6YOU Modesto CA, 765 N6ICW Sacramento CA, 767 W6CYX San Jose CA, 784 KB6LJO Palos Verdes III [WALA] CA, 787 KA6UAI Palomar Mtn CA, 791 KH2BI Pasadena CA

You can find a list of all of the active repeaters world wide on the above irlp link.

Something you may want to look at is also antenna height restrictions in your city. I made the mistake of moving into a city that has ban outside Ham and CB antennas over 12 feet off the ground so setting one up is next to impossible for me.

I don't mean to discourage you but you will have a fun road to travel for a while. Again I must recommend you contact your local club to make the road a lot easier to travel.

GOOD LUCK

Hi!

I've got an old dual band rig that used to have wideband receieve. After some five years of power-loss, the hand held is back to 2m and 70cm. :(

Unfortunately I've lost the manual and don't remember which keys to press to enable the wideband rx.

NB that this is the W21E without built-in keyboard. All the patches I've found so far doesn't work, but I know that I succeeded patching it some five or ten years ago.

Please help, and respond by e-mail if possible. I will summarize here if/when I get some answers.

Regards,

Mikael Fredriksson /SM5SYO

Thank you for bringing up IRLP, I hadn't heard of it before. Two of the cities on your list are near here, so that is a real possibility.

I don't think that antenna height restrictions will be a problem here, since I live outside the city limits.

Hello Dear OM!

Carsten (DF2DD) and Andre (DL4QB.that's me J) are enthusiastic user

of Magnetic Loop Antennas. I searched for information about Magnetic Loops

since a while and I found some very interesting stuff at Carstens Homepage.

There is nice a board with less but very helpful traffic. It was very
helpful

to collect the needed information as well. In the meanwhile, we improved the

Board System and we would like to spent an own Domain very soon J

We thought also about an English part within the Board System. This is now

done and can be used! It would be very nice to get some nice information,

hints and experiences of other Magnetic Loop users.

If you can suggest someone this board, we would be happy as well J!

There are already some docs in German available.if you like to understand it,

Please ask me and I will translate it for you.

URL: http://www.df2dd.de (klick "Direkt zum Loopforum")

73 de Andre (DL4QB) and Carsten (Df2DD)

It is new and growing with leaps and bounds. Some of the old hams don't like it because it takes the skill out of working DX. They are the same ones that believe that all hams should be on HF and build all of the equipment themselves. I like it because I can't have the antenna so 2 meters and IRLP do the trick.

David has even found commercial interest in his system from companies that don't want to set up UHF backbones and so on.

You are very lucky that you are outside of an antenna restricted area.

this works for IC-Z1 (which I think is same/varient of rig):

push [B] + [$] key while turn on power switch

Hi all,

Has anyone tried to work a TH D7 TNC with W2K as operating system on the
computer ?
I always receive "Communication timeout error" as message. The comport is
OK, I use it to connect to my TM D700. I've tried different control
applications (link 7, MCP D7 v1.2, ...) but the message is always the same.
I tried every setting I could think of ...

Any suggestions ?

Been listening to 2m SSB a lot the last couple days because of the enhanced conditions with the meteor scatter and I've heard a couple guys calling "CQ scatter" and ending with "break". Is this normal operating procedure when working meteor scatter? It's always been my experience that "break" was reserved for emergencies on ham radio. Any opinions?

I am trying to find the best way to install a 2-meter rig (Radio Shack HTX series) in a 1997 Honda Accord value pack. There is a shelf below the AM/FM radio, and ideally I would like to remove the shelf and fit the rig in its space. However, presumably as a theft deterrent, the shelf has prongs which go up behind the face of the AM/FM radio and is not easily removable.
Any suggestions about how to go about this? I would like to keep the shelf intact and not otherwise make any alterations to the vehicle that can't be reversed if I remove the rig.

yes thats normal for MS

if you do a google search for it you will find a website or two telling the technques for working meteors
and break break is used in emergancies on FM its more of a gentlemans agreement than a rule

i was hearing MS on 6 last night very weak but there
good luck

i would suggest taking it down to your local CB shop or car audio place

that does installs and let them do it they know all the little tricks to
get those panela and stuff off with out distroying it
good luck

On Southern California repeaters oft heard is break -- indicating the need
to get in quickly.
Most times it is non-distress -- just wants to join in, give info, or make a
quick call for a buddy.
The proper way to join in is just your callsign followed by joining in,
quick call please, info.

Break break should be used for an emergency or distress call -- but many do not follow this.

I hear break all the time on HF -- indicating a station wants to join in or has information.

However the ARRL page on repeaters advises not to use break unless you want to help in an emergency. Further they say break break is to make a distress call. See URL: http://www.arrl.org/tis/info/pdf/repeater1.pdf

Many Hams don't have a clue what the proper useage is -- so it is greatly abused.

Perhaps a hang over from CW where BK was used as a breakin or quick turn over - not necessarily a distress signal. It was a quick way to pass over to the other station or interject in a QSO.

Regarding Meteor Scatter -- there are five links to this subject at URL:
http://ac6v.com/opmodes.htm#MS
None of them use break as far as I could tell. The protocol is pretty sharply defined.
Example CQA CQE CQN CQZ protocol for listening splits are recommended.

So CQ Scatter Break is maybe a single ops spin on things.
--
I Doubt, Therefore I Might Be

Reverse the recv and tx lines (2 & 3) on the serial interface between the TH-D7 and the computer. These are diagrammed in a confusing way and may be reversed.

Hyperterm should work - set 9600b. The TASCO message should come up when you push the TNC button on the HT keypad. Be sure to push it twice to get it out of APRS mode and into full TNC mode.

Yes. The word "break" is and has been
used in meteor scatter for years.
It is used to indicate clearly, the end of your transmission due to the short
meteor bursts.

I'm sure this is the millionth newbie question like this, but I'll ask it
anyway. I'm sure to be grateful for any responses.

I just passed my General test last weekend and am looking to get started in AR.
 (This is my first license.) My initial interest is in long-haul HF comm - CW
first and voice second. I'm generally aware of 2m/440 ops, but I'm not sure
what the short-range/repeater ops will do for me.

What kind of start would you experts recommend for me? What bands do you find
interesting? Why?

Thanks...

I attempted to do the mod for the HTX242 to allow TX on the MARS
frequencies.
This mod was just lifting a jumper. After the jumper was lifted, the radio
now only covers 144.000-145.995
I replaced the jumper but the same results. I have tried resetting the radio
as per instructions also.

```
Has anyone seen the problem before.
I now have a 2 meter mobile that only works the lower 2 meg of the band.

WEll Florida had a big break and it was a my view a "shame" to much
money going to well whos knows poorly planed.I mean come on! People
who travelled hundreds of miles were turned away from keying by the
poor judgeing and the whole way it was run.Maybe thats why you need to
leave the breaks to the ones who arent trying to get rich  all in the
same time of haveing a good time.shit i won mojority of the classes
and didnt even get 1 tape and didnt even get my money back for the
wins in the classes witch was supposed to be 80percent payback lol sad
day for me all the time it takes to prepare for the keydown is just
thrown away by a few people who just try to  ruin it by being greedy
and to those people you know who you are trust me never try to have a
big break again cause i think you already know it would never happen!
cause it never did this time neither!

If I may clamber aboard here . . .

. . . or what about the Icom IC-T81A? Although discontinued, there are still some around.

The RadioCom program does not control the scanner or any other receiver. It
appears to simply process the audio output.

I can't speak for the VX-7R but I can say that I've been disappointed in my TH-F6. After owning it for two months the B band stopped receiving completely. In all fairness I must say that Kenwood did repair the radio and they returned it to me in less than two weeks.

However, just recently I attended an air show and intended to use the HT for monitoring the aircraft at the show. The area was fairly RF-dense. The first thing I noticed was that the rig was virtually unusable due to intermod on the 440 Mhz band as I tried to QSO with someone else on a repeater that was literally line-of-sight from my location. I encountered another ham at the show who had a Yaesu VX-5. Not only did his radio not appear to be affected by the intermod problem I noticed on my radio, he could also copy aircraft transmissions from several miles away. I could not copy the aircraft until they were within two or three miles of our site. I also noticed that the sensitivity on the military frequencies was quite low.

Also, if you intend to use the radio to monitor HF, please be aware that the radio is nearly deaf between 1500 KHz and the bottom of the FM broadcast band. This anomaly is partially due to the poor antenna (rubber duck) but even with a long wire antenna reception is still marginal.

Again, I can't advise about the VX-7 but I can say that the F6A has been a disappointment to me. As with so many things, YMMV.

rec.radio.amateur.misc:31066 rec.radio.amateur:3942

Dear radio amateur friends (and perhaps fellow collectors),

Please be warned about HAM radio amateur"Mr. Jose Gerardo Garcia Mora" of Costa Rica, callsign TI2YLL. http://www.qrz.com/callsign/TI2YLL ,
http://www.eham.net/callbook/   (search for TI2YLL)

As a "collector", he has cheated many in the collectors' community in the past. But this might also concern you, too. Apart from QSL cards, he has also advertised for other collectibles' exchange within your

community's pages.
And I believe that you often exchange items related to your hobby, too.

Several months ago, I posted a message on several newsgroups to warn collectors about "Mr. Jose Gerardo Garcia Mora" of Costa Rica, "collector" or "seller" at times of, breweriana, cans, matchbooks, paper money, coins, stamps, phone cards, postcards,cigarette packs and of course QSL CARDS. I consider him the worst cheater I have ever come across; he has cheated at least 10 individuals besides myself, to my knowledge.

Mr Garcia's name has been included in several collectors' Black lists. Here are links to just a few of them:

http://www.geocities.com/kirbas/mora.html (phonecards)
"http://www.network54.com/Hide/Forum/thread?forumid=169329&messageid=1007389482&lp=1007389482/
" (banknotes)
http://www.ophetweb.nl/collcoin/blacklist.html   (coins)
Jan Meinders black list at http://www.beercollection.net/ (breweriana)

Mr Garcia Mora had disappeared completely from the Internet since last September, right after cheating me. Recently he reappeared with new email and surface mail addresses, and sometimes with a different name (more like a different combination of his 4 names). I was alerted by a cigarette pack collector from Italy and after a brief search on the Web discovered the following:

He now uses the following email addresses:
electronica2391@hotmail.com,
electronica96@hotmail.com and ti2yll@qsl.com
(instead of the old imex81sa@racsa.co.cr)
and this surface address:
P.O.Box 10485, (instead of PO Box 7138 which he had been using since 1993)
San Jose,
Costa Rica,
America Central

He now mostly appears as "Gerardo Garcia" , instead of Jos�.

This man has managed to remain active since 1993, beginning without the aid of the Internet. He has been blacklisted before, but he somehow manages to continue cheating, by avoiding newsgroups and large, frequently visited sites, by switching from one field to another and by disappearing for months from time to time. People either choose to forget about him or just don't have the time to go after him.

Thank you all very much for your time-and, for those of you who are fellow collectors, happy "safe" collecting .

Xenophon Alexopoulos, Greece

email: xenophon "at" kodros "dot" gr

~ ~

For more details, here follows the latest research I have done on this individual:

For years he has posed as a Ham Radio amateur with the call sign TI2YLL. Look at http://www.qrz.com/callsign/TI2YLL. This was his old identity as "Jose Garcia."
At another related site, http://www.eham.net/classifieds/, try a search for TI2YLL. Here you see a new email address combined with the old PO Box number and his usual name.
At "http://www.guestbook.ru/book.cgi?user=uradxclub&action=show/ ", yet another email address. He does not mention a name here but it is more than obvious that it is him.

At the following links he appears with the new email address as "Gerardo Garcia" and has a new PO Box address:
http://jos.hkcampus.net/~jos-wym/gbook.html
http://members.tripod.com/~HouleV/America.htm
"http://www.santanderciudadviva.com/tablon.asp?buscar=&paginaactual=5/ " in Spanish
"http://www.molepostcards.com/services/adverts.php?id=497&p=1&o=&s=/"
http://books.dreambook.com/peacenest/main.html   from
http://www.deuss.com/peacenest/
http://www.pcbandit.net/guestbook/guestbook.pl ,
and at http://www.pcbandit.net/traders/ (number 103)
http://www.cigpack.at (Guest book).

Besides the above, he maintains three separate pages on www.webshots.com , where he proudly displays his postcard, cigarette pack and QSL card collections, the greater part of the first 2 collections quite possibly stolen.
http://community.webshots.com/user/69as010
http://community.webshots.com/user/ggarciacr
http://community.webshots.com/user/packs1952
http://community.webshots.com/user/matches101 (empty for now)
Are the cigarette packs perhaps those stolen from Thomas
http://members.aol.com/lfm1111/thieves.html ?

I have a lowly tech license and want to move up. Is anyone aware of Internet sites with live practice Morse code streaming? I came across several practice MP3 files...but they're of course no good to use a 2nd time. I was told that if I had an HF rig I could tune into a couple stations with constantly updated practice code. Is there anything similar on the Internet? Thanks for your suggestions.

Hello Hams.

Im having a problem with my tone decode on my Yeasu FT-847
Its not working right. When im in tone deocode and open the squelch, it makes noice every 3-4sec.
When tone decode is working right as in my yeasu ft8100, nothing comes trow the speeker unless the right subtone is with the incomming signal.

Anyone else know this problem, and is there a cure for it?

Thanks.

Amateur Radio Newsline™ Report 1300 July 12, 2002

Celebrating a quarter of a century in service to ham radio, this is Amateur Radio Newsline report number 1300 with a release date of Friday, July 12th 2002. It follows in 5-4-3-2-1.

The following is a Q-S-T. The ham radio Olympics are happening in Finland and a Reading Pennsylvania teen is named Young Ham of the Year here in the United States. Find out who on Amateur Radio Newsline report number 1300 coming your way right now.

(Billboard Cart Here)

**

RADIOSPORTS: THE HAM RADIO OLYMPICS FOR 2002 ARE ON

Its the Super Bowl of ham radio contesting. The 2002 World Radiosport Team Championship games also known as WRTC 2002 have been taking place this week. Jeramy Boot, G4NJH, reports:

--

The World Radiosport Team Championship, sometimes called 'the Olympic Games of Amateur Radio', takes place in Finland between the 9th and 15th of July. WRTC is a competition among 52 two-person teams of the top amateur radio contest operators in the world.

By bringing competitors together in one geographic area and providing equal operating conditions, including antennas and power, the variables normally associated with radio contesting are minimised, and the individual team's operating skills are emphasised. Look for the national teams taking part in next weekend's IARU HF Championship contest from sites in the Helsinki area and using callsigns with the unique OJ1 to OJ8 prefixes.

Jeramy Boot, G4NJH.

--

The contest began at 1200 U-T-C on Saturday the 13th of July, and runs for 24 hours. The WRTC 2002 organizing committee is asking any of you who worked the conterstants to e-mail your logs by 1800 U-T-C on July 14. These "early bird" logs will be used only for log checking purposes related to the WRTC 2002 teams. The e-mail address is logs@wrtc2002.org

Also, Film maker Dave Bell, W6AQ, is in Finland recording the event on digital videotape. Bell produced the popular Ham Radio Olympics video that chronicled the 2000 WRTC games. (WRTC2002, GB2RS, W6AQ)

**

RESCUE RADIO: HAM RADIO AND THE TEXAS FLOODS

On this side of the Atlantic, the Federal Communication Commission declared a general communications emergency Friday July 5th in response to severe flooding in parts of Texas. Amateur Radio Newsline's Bruce Tennant, K6PZW has more:

--

Thousands of people were evacuated from three West Texas towns as a massive storm dumped more than a foot of water on an area that rarely sees more than 2 feet a year. This, as rainfall in flood-weary Central Texas continued and flood water surrounded homes in 29 counties.

Statewide,the week of flooding has forced at least 4,000 people to evacuate, killed at least eight people and caused tens of millions of dollars in damage. Its also cut off normal lines of communications to some areas and that's where ham radio was called in.

On Friday, July 5th, the FCC issued an edict declaring two parcels of spectrum -- one on 40 meters and the other on 75 as off limits to all but those stations handling flood emergency traffic for 72 hours. Those frequencies were 7.285 MHz during daylight hours and 3.873 MHz at night. Amateurs not directly involved in the emergency communications were required to stay at least 3 kHz away from these frequencies until the order is rescinded. The FCC cancelled the order at 1700 UTC on Monday, July 8th. But as we go to air, hams involved in Texas ARES, along with other volunteer groups, are still providing assistance to the flood ravaged areas.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

More on this story as information is made available. (FCC, ARRL Bulletins, Internet postings, other sources)

**

RESCUE RADIO: AZ HAMS STAND DOWN AS WILDFIRE IS CONTAINED

After weeks of battling the largest wildfire in Arizona history, ham radio has stood down and firefighters from around the country are being reassigned to other states or sent home. This, as the half-million acre Rodeo Chedeski blaze was finally contained on Sunday, July 7th. And hams have gone home. Amateur Radio Newsline's Norm Seeley, KI7UP, in Scottsdale has the rest of the story:

--

SATERN, which by the way stands for "Salvation Army Team Emergency Radio Network was probably the most visible ham radio communications group involved with the giant Rodeo Chedeski firestorm. SATERN was active throughout the emergency providing assistance to The Salvation Army in it's disaster relief mission. The Salvation Army was assigned by the State of Arizona to be responsible for receiving all material donations. It also was responsible to distribute these supplies to any agency or group requesting them. The SATERN net, operated on 7.265 MHz dayside and 3.990 MHz evenings   It finally stood down and released the frequencies when the shelters closed down and their services were no longer needed.

What SATERN did not do was to handle health and welfare messages into and out of the area. That job fell to ARES and the Red Cross and both responded as expected. A-R-E-S used several High Frequency nets, local repeater communications and the Cactus Radio Network intertie to handle hundreds of tactical and health and welfare messages.

Another group deserving mention is the Kachina Amateur Radio Club. It was activated on June 18th handling communications for the Navajo Emergency Operations Center and shelters set up for the evacuation of all evacuation areas at that time. The Kachina Amateur Radio Club was on the air in support of the shelters through June 30th.

As the fire peaked in late June, more than 4,400 personnel -- most of them firefighters -- were working to corral the blaze. That number has been reduced to about 1100 now that the fire is fully contained.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale Arizona.

--

As we go to air, the firefighters still on the scene are busy mopping up smoldering embers top insure no new eruptions take place. In some areas, crews are already at work seeding the burned land to help minimize the effects of erosion from the coming monsoon rain season. (ARNewsline™ from various sources)

**

RESCUE RADIO: EAS WORKING WELL IN THE ARIZONA WILD FIRE EVACUATIONS

The E-A-S system woked well in Arizona during the recent Rodeo Chedeski wildfires. According to reports in the CGC Communicator, Navajo and Apache County EAS woked almost flawlessly in ordering evacuations during fires. About 30,000 people were evacuated at the height of this emergency. (CGC Communicator)

AWARDS: JOSH ABRAMOWICZ, KB3GWY, NAMED ARNEWSLINE™ “YOUNG HAM OF THE YEAR”

The nominations are in and the committee has reached a decision on this yearsAmateur Radio Newsline Young Ham of the Year. And now its time to share that decision with you. And who better to make the announcement than the 2001 Young Ham of the year. Pareick clark, KC8BFD. introduces us to yet another young ham who is keeping the hobby alive:

--

He is 17 years old. An 11th grader at Central Catholic High School in Reading Pennsylvania and an Eagle Scout. And less we forget, he loves bringing new young hams into the hobby through the scouting program. And for those reasons and many more, Amateur Radio Newsline has named Josh Abramowicz, KB3GWY, as its 2002 Young Ham of the Year.

Josh was away at a scout camp when the committee reached its decision. We finally got him on the phone and this was his reaction when we told him the news:

--
Abramowicz reaction audio
--

According to the nominating form, Josh Abramowicz became interested in ham radio because of his parents and the Boy Scouts. His dad is Mark NT3V and his mother is Suzanna NZ3G. Josh says that for him, becoming a ham was in the cards:

--
Abramowicz: I got into it [Amateur Radio] through them when they brought the stuff [ham station out years later after it had lied dormant for awhile. They hooked it up and I just could not keep my hands off of it As a matter of fact, I used to sneak up and just dial up and down the bands just listening to stuff

sometimes.”
--

His parents also gave Josh a good reason to get his ham ticket:

--
Abramowicz: “After the year years went by they said: ‘Why don’t you go and get your license - and by the way - if you don’t get your license you are not getting a drivers license. I said O-K.”
--

Talk about incentive licensing but in short order Josh had his Technician ticket. But it was his involvement in the Boy Scouts, a scouting Jamboree and a chance to operate K2BSA that really started his ham radio career:

--
Abramowicz: “So I looked into what was required on the application. Of coarse you had tio be a licensed Amateur Radio operator. By then I had my Technician license and I really started pushing for my General license. That’s where I am now, studying for the Extra license.”
--

As a member of the K2BSA staff at Fort A.P. Hill in Virginia, Josh helped to demonstrate ham radio to the 35,000 Scouts attending the event. He also helped in the training of some 400 Scouts who earned Radio Merit Badges at the gathering.

But thats not all. Another achievement credited to KB3GWY is that of organizing a scouting Amateur Radio Venture Crew with the Hawk Mountain Council in his hometown of Reading. PA. What is a Venturing Crew? Josh explains:

--
Abramowicz: “Its kind of like the Explorer program. It involves boys and girls over the age of 14 until you become an adult. It’s a completely separate program designated to high adventure kind of things - not your normal, average camping trips but more involved things like Philmont Treks and summer camp kinds of things or the Florida Sea Base would be considered high adventure.”
--

Josh presented his idea for a radio Venture Crew to the Frankford Amateur Radio Club and obtainded its support as the sponsoring organization. He then convinced the Hawk Mountain Council leadership to use space in a new science center at its headquarters for a perminant Amateur Radio station. This station will soon be available to campers the year round.

--
Abramowicz: “Its up here on the mountain. The propagation will be absolutely great. I’m expecting some really, really good DX from up here and we have high hopes. As a matter of fact, we are going to be doing a demonstration up here this weekend on Saturday. We are going to have some of the Venture Crrew kids up. Just fiddle around with to see whats open and see what we can find. Get the kids on and let them talk a little bit. Maybe a 2 meter set-up. And I

think that the Cub Scouts are up that weekend. And they will be checking us out during their free time. They are up for a Super Cub Weekend."

--

Josh Abramowicz, KB3GWY, will receive his Young Ham of the Year Award plaque at the Huntsville Hamfest in Huntsville Alabama on Saturday August 17th. His trip to the hamfrest is a gift from Vertex Standard Corporation which wiull also be prssenting Josh with a gift of its Yaesu brand ham radio gear. Josh will also receive a week at Spacecamp Huntsville courtesy of CQ Magazine.

--

The committee judging the award also name to runner-up finalists. They are Evan Anderson, KC0CWP, of Ashland Nebraska and Thomas Tenaglia, K3TAT who lives in West Chester Pennsylvania. Both will receive a certificate of appreciation from the award sponsors. (ARNewsline™)

**

REMEMBERING THE PAST: HEIL DONATES SPECIAL MICS TO QUEEN MARY AMATEUR STATION

A special presentation of 'commemorative microphones' honoring the operators of the Queen Mary ocean liner Amateur Radio station will be made on Saturday, July 27th. This, by by Bob Heil, K9EID, the President of Heil Sound Ltd..

The Queen Mary is permanently docked in Long Beach California. The ship is a popular tourist attraction as is its Amateur Radio station, W6RO, which operates daily from the historic Queen Mary Wireless Room. And it is in that Wireless Room that the presentation will be made.

According to K9EID, the new microphones are being custom manufactured for the Wiress Room. He adds that each is an exact replica of the broadcast mic's used during the years the Queen Mary was at sea. (Heil Sound release)

**

HANDI HAMS: EXTRA CLASS TAPES NOW AVAILABLE

The Handi Hams have announced that the Extra Class Question and Answer pool, valid through 2006, is now available in an MP3 audio CD and in two track tape for its blind members. If you need a copy, contact Handi Ham headquarters at area code 866-426-3442 or sewnd an e-mail request to secretary@handiham.org. Again, yopu must be a Hamdi Ham member to qualify for this recording. And Handi Hams also has announced that work continues on the main body of the ARRL Extra Class License Manual in audio format for its blind members as well. (Handi Hams)

**

PROMOTING HAM RADIO: CQ MAGAZINE TAKES ON "THE HUMAN RACE"

CQ magazine has been named the Official Journal of "The Human Race." "The

Human Race" is a planned educational television series in which two amateur radio operators will participate in a global "road rally." Amateur Radio Newsline's Henry Feinberg, K2SSQ, has an in depth look at the show and how it will work:

--

How does it work? Simple. There will be two ham radio contestants. One ham will head East and the other West from Kansas City Missouri beginning in July of 2003. Over the next six months the hams will travel around the world but using only transportation that is volunteered by other amateur operators that the ham competitors meet along the way. The race will end in a location roughly halfway around the world where the paths of the two competitors cross.

But thats only part of the story. Along the way, each racer will encounter a series of pre-selected "ham hosts." These are people who have expertise in a particular area of amateur radio. They not only play host to the competeing amateur, but also are interviewed by the competitor about their area of specialty and the role ham radio has played in their lives.

William Desjardins, W1ZY, is the shows producer. He says that " 'The Human Race' is based on the premise that Amateur Radio is inherently a human activity. As such, technology is a tool used by people around the world to connect and communicate with each other."

--
Desjardens: "People who use the Internet, and use chat rooms and send video pictures to each other -- and engage in instant messaging and so forth -- these people are prime candidates to become amateur Radio operators."
--

By way of technology, each competitor will be outfitted with advanced communications systems, including amateur stations. Each will also be accompanied by a TV production crew and tracked using the Global Positioning System and APRS. This information will be displayed on a constantly updated website enabling hams and others around the world to follow the progress of the race making it a competition that everyone can be a part of.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

For its part, CQ will publish a series of articles and updates written by Human Race Producer Desjardins. It will also provide updates and additional information on its website.

The tentative schedule calls for the completed 8-part series ready to air in the fall of 2004.For more information on "The Human Race," see the program website at www.home.earthlink.net/~bdesj but soon to be moved to http://www.humanrace.org (CQ)

BREAK 2

Here 25 years ago and still serving you today. From the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

UPCOMMING EVENTS: MUSEUM SHIPS WEEKEND

Some interesting upcoming events that you will want to know about. We start off with Museum Ships Weekend. That’s the 20th and 21st of July and word that The U-S-S Salem Amateur Radio Club will be on the air as K1USN. During Museum Ships Weekend each participating vessel will be on the air for 48 hours and the idea is to work as many of them as you can In the case of the U-S-S Salem, a certificate will be available for working ten or more event stations during the event. For more information and a QSL address please take your web browser to www dot qsl dot net slash K1USN. (Via e-mail)

**

SPACE AND SCIENCE: HIGH ALTITUDE HAM RADIO BALLOON LAUNCH SUCCESS

EOSS 57, the Edge of Space Sciences Amateur radio group of Colorado successfully launched and recovered 3 high altitude balloons on June 22nd. THis, using Amateur Radio APRS and DF techniques to track and recover the payloads. According to several Internnet postings, he balloons carried high altitude experiments, camera's and fast scan amateur television to an altitude in excess of 80,000 feet. The launch took place in DeerTrail, on I-70 east of Denver, with the balloons taking a general North easterly track. The landings occuring near the Fort Morgan Colorado area. The Montana Space Grant Consortium, and Iowa State University Habet crews launched with EOSS and tracked the balloons to touchdown. More information is on the web at www.eoss.org. (EOSS Release)

**

INTERNATIONAL - AUSTRALIA: VNG GETS 6 MONTH REPRIEVE

The Australian standard time and frequency station VNG, which was scheduled to close down on the 30th of June, has received a six-month reprieve. The station will now close down on the 31st of December 2002. The postponement came about following complaints from Radio VNG users. However, the commission that agreed to the postponement has also insisted that the VNG Users Consortium provide a voice announcement for broadcast on the station from mid-July, advising all users of the new closing date. (Q-News)

**

INTERNATIONAL – CANADA: PERMISSION TO JAM

The Canadian military and police departments have been authorized to block radio and mobile phone signals if necessary during the G8 Summit and during the

Pope's visit to Toronto in July. A Royal Canadian Mounted Police spokesperson told szeveral newspapers that the move was essential to ensure the safety and security of those attending both events. This is the first time legal provisions against the interference of radio communications have been overridden in Canada. (Published news reports)

**

DX

In DX, word that SP3GVX, who operated from HF0POL in 1997 and 2000 will spend a year at the Hornsund Base on Spitsbergen starting in July. His new callsign is JW0HU. There is no QSL information available at this time. (GB2RS)

Also, SV1BRL will be active again portable from Kefalonia Island from July until mid-September. He welcomes bureau QSLs, but please note that they should be routed through the French REF Bureau, marked DPT 33. Do not send cards through the Greek QSL bureau. (GB2RS)

And a new RSGB QSL Bureau sub-manager has been appointed for the holders of Foundation Licences in Scotland. Those are the new MM3 series of callsigns now being heard on the air. The person taking on the post is Mr R Simpson, GM7NZI. His addxress is 53 Jedworth Avenue, Glasgow , Scotland, post code G15 7QE. (RSGB)

**

INTERNATIONAL – UK – A SECOND CHANCE FOE DIGITAL TV

Still in the U-K, an attempt is being made to revive that nations terrestrial digital TV industry. This, following the collapse of ITV Digital, the company that held the license. According to the Netherlands based Media Network e-newsletter, the U-K’s Independent Television Commission considered four bids to take over the license, and has decided to award it to a consortium consisting of the British Broadcasting Company, British Sky Broadcasting and transmission services provider Crown Castle Communications. But the question remains as to whether or not the new consortium be able to restore confidence in the British digital television industry. More is on the web at http://www.rnw.nl/realradio/features/html/uk020705.html (Media Network)

**

THAT FINAL ITEM: THE FUTURE OF DIGITAL TV: PART 4

And speaking of digital television, this week we take a look at transmission systems and who is providing a digital picture to you. Again, from the pages of the D-X Audio Service magazine, here is Editor Fred Vobbe, W8HDU.

--
This is an audio only report. No text available. Please download MP3 audio at www.arnewsline.org.
--

By the way, for those of you not aware Fred Vobbe, W8HDU, is not only the editor of the DX Audio Service magazine. He is also the Chief Engineer at WLIO television in Lima Ohio where he das a first hand working knowledge of whats happening in the world of Digital TV. (NRCDXAS)

I'm making a model radio and plan to send video/gps telemetry over the radio... the problem is this stuff is really expensive and I need to get a TNC for my ground station and a packet radio on the rocket, which would have to be small. any suggestions? Secondly, can good high gain antennas be built by hand? Thirdly, what types of wires/connectors would you need to connect a serial ports (rs232) to a radio?

Hello!

I am trying to find a manual for the YAESU FT-530. I own the radio, but my instruction manual has disappeared. If someone could email me a PDF of the manual, that would be greatly appreciated!

73's Bill Roberts

For occasional use, get the one with the most features for the least
price.  If you get serious or you think that you might, then I would go
along with Icom suggestion.

Hey -

Anyone else had problems with this one ? The weird part is, I only noticed it when I tried to do a test download of a file (mirror.exe) from my website .

Some variants activate on 13th September and 13th March, I seem to have come across a new variant which activates on 13th July .

Just in case - I erased the file and replaced it with a zip file with the same (non executable) files in . Works fine .

Either that or NAV is false alerting on the file - which I find hard to believe, as the file just contains three files, an ASM file, a HEX file and a text file, as a self-extracting ZIP .

I saved it to disk and submitted it to SARC - just in case .

I'm not sure at this time as I have not keep up with the latest rigs. If the price is right and the features sufficient, go for it.

I checked using the infected copy (on disk) and comparing it with the
known clean copy I made of the same file , found that the size
increaed by 3584 bytes . There is a good chance that this is in fact
W32.Elkern.3587 not 4926 .

BTW has anyone ever seen this before , where Klez is definetely *not*
present ?
I figure that either it is date activated on 13th July (when I first
noticed it) or it somehow got onto my site after I uploaded the file .

Translation: "Wahhhhhhhhhhhhhhhhhhhhhhhhhhhhhhhhhh!!!!!!!"

Don't cry so, Fuckup, did you figure out that you royally fucked up when you said:

FUCKUP Lee" <SLee@houston-hunks.com> geography idiot and imbecile fucks up as usual when he thinks Marshall County, Alabama and Marshall County, West Virginia are the same place in message <afvsc2$6aa$1@pita.alt.net>:
" Then what is at http://www.geocities.com/skywarncanwarn/ doodle brain?
 It sure looks like the Marshall County ARES, and it even has a place to send email."

In the above quote you are trying to pass off a Alabama ARES website for one in West Virginia. You treally need to quit mixing your freebase cocaine and the alcohol, Georgie Girl.

Then you fucked up by saying KB8RPI was in charge of the Marshall County , WV ARES......wrong again, dumbass.

But DO continue your little dance, and make sure you shreik "I'm a preettty layyyydy!" when you reply.

> If people really wanted the word to get back to Marshall County's ARES
> folks, they would simply contact KB8RPI.

That's fine, except KB8RPI isn't in charge of Marshall County ARES, you stupid fuck.
[end restore]

As usual, you FUCK UP royally, spinchter-expert. KB8RPI hasn't been in charge of the Marshall County ARES for over a year.

No. An infection with Elkern doesn't result in an increase of the size of an infected file because Elkern is (like CIH) a cavity infector. That means the size of an infected file doesn't change.

See also <http://www.Europe.F-Secure.com/v-descs/elkern.shtml>.

No.If there is enough cavity for it to insert to,the file size won't change.But if there is not enough cavity,it will append itself to the file tail.
Because Elkern.4926's virus code size is neerly 5K,so there are many chance that there is not enough cavity in the host file,and the host file will be enlarged.But the size the file increased are not certain.

Pardon my poor English

Hi all,

It's been quite a few months since I last posted anything here, in fact it is about a year ago. Harry's Homebrew homepages is now located at http://w1.859.telia.com/~u85920178/ where there are no banners to slow down the traffic. There are no outages due to excessive traffic since there is no bandwidth limit. It is just a bloody dificult URL to remember!

During the past year, I have been hounded by demands for payment to "freeservers.com" (or should that be "FEEservers"?) so I have moved the page http://sm0vpo.8m.com to http://w1.859.telia.com/~u85920178. Some of you may be aware that PMP3.NET was hacked and eventually closed down due to the misuse. This took away my free homepages that were kindly hosted by PMP3.NET.

There is a new messageboard too, also without banners. A new FAQ (Frequently Asked Questions) and FASQ (Frequently Asked Silly Questions). All the old ones have been kept, but some new ones have been added, Eg: "How many volts do I need to kill someone?". During the past 12 months, Harry's Homebrew homepages (http://w1.859.telia.com/~u85920178/) has had quite a few additions. Some of the latest project examples include:

EPROM AF Generator (still under construction).
WAV to EPROM conversion.
Many synthesiser projects.
DC-DC voltage converters.
150mW FM TX (88MHz - 108MHz) (technique Ok for 145MHz).
Synthesised FM TX (88MHz - 108MHz) (technique Ok for 145MHz).
Antenna Z bridge for Spectrum Analyser.
Antenna Questions & Answers (Eg: "Size isn't everything!").

H.H.H. now has just three sites, but no mirror sites. they are all located at:

PROJECTS - http://w1.859.telia.com/~u85920178
Unlimited bandwidth, Full site, No advertising, SWE

VISITORS CIRCUITS - http://hem.spray.se/lythall
Selected visitors submitted circuits - SWE

PDF LIBRARY - http://hem.passagen.se/sm0vpo
Unlimited bandwidth, Full site, SWE

So perhaps I may have the pleasure of a visit from you. Whatever you do, have fun with antennas, homebrew, radio and electronics in general. Very best regards from Harry Lythall - SM0VPO

I suggest you visit www.g4fon.co.uk and download his free Koch-method training program.

It will send you random strings of characters or canned files or words selected in random order from a common word list, at speeds you can select.

If your intention is to pass the 5 wpm test and then forget about the code, you can run it at a character speed of 15 wpm with a code speed of one-third. This will give you 5 wpm Farnsworth method practice, as on the exam.

Bit if you intend to progress in code proficiency, then I *URGE* you to use the Koch method to go straight to 20 wpm copying ability. You'll then avoid the "painful plateau" around 10-13 wpm that we who learned by the traditional method have had to overcome. (Let me know if you'd like elaboration on the "painful plateau".)

I see the DJV5 is listed at 199quid
for 50quid more you could get the Kenwood TH-F7

http://www.wsplc.com/

What kind of connector does an alinco handheld radio have, rj45 or 8-pin?
plus can microphone sockets do both input and output?
thanks

My Alinco DJ-195 handheld transceiver has a 1/8" jack for audio out and a 3/32" jack for mic in. As far as I know this has become the de-facto standard for HT's. BTW, the 195 has been a great radio for me - I'd buy another one without hesitation.
73,
Russ KB1GKN

Subject: Where Can I Find Power Connector For Kenwood Mobile???
Message-ID: <20020717011625.26138.00000137@mb-mj.aol.com>
Xref: archiver1.google.com rec.radio.amateur:3976

Any help on where I can find this connector is appreciated (it's the power cord that connects to the other half of the power cord that is attached to the Kenwood dual band TM-G707A mobile 2 m/ 70 cm radio). I would prefer to just purchase quick disconnect female terminals, crimp them onto 10 gauge wire and insert them into this connector (instead of splicing them onto a power cord with the wire and quick disconnect female terminals already attached). I have placed 2 pictures of the connector on my webpage (http://members.aol.com/xtx99/index.html)and would appreciate and suggestions. Radio Shack didn't have it. I'm saving the original power cord for base operation and temporarily carefully inserting disconnects into the connector for mobile operation (thank God for fuses!!) Thanks

any suggestions on how to setup a wireless lan connection between two
houses 1700ft apart? 802.11b is out of the question i believe because
of too many trees.

thanks,
eyi

A shot in the dark maybe but could anyone out there please give me a lead on
operating/service data for the above HF tranceiver, or info about the market
they were produced for &c.

Thanks

John

Hi Guys,
I have a Radio shack #15-1171 ' cable bi-directional amplifier' -
' 5-40 54-1000 Mhz ' , left over from an old TV problem that has been
cured, that is not being used.
Could this be used to boost the incoming signal from my bipole antenna in a
tree, going to my 1970's FM stereo broadcast receiver ?

A simple, non theoretical, non technical reply please. I am ignorant
in this area.

Thanks lots.

Does anyone have any old QSLs from K3HLU or KN3HLU, from 1958-1966?

Thanks

Subject: Increase low power on Icom IC-290A?
Message-ID: <20020603104721.26636.00002146@mb-mk.aol.com>
Xref: archiver1.google.com rec.radio.amateur:3783

Does anyone know if it's possible to increase the low power setting on an Icom
IC-290A from 1w to 3w? I'd like to do this to drive an amp. This would be
better than lowering the high power setting from 10w to 3w. If I do that,
without the amp, I'd only be doing 3 watts, as opposed to 10w...

Can anyone help me with a pair of manuals?   I need an owners manual
for a TenTec Triton IV digital, and a Kenwood RS-1000. TenTec wants
too much $$ for theirs, and Kenwood's manual is not available online.
Please email me back at vic303@lycos.com

I am selling an AMD K6-2 CPU and fan. I bought these recently on the internet
because I had a problem with my old computer. After buying them, I decided to
just upgrade completely, so now I don't need them. I am selling them for $45 or

willing to trade for a tone encoder board/box. Please email me directly if interested.

Turns out I will be in MA after all. I was going to take rf related classes in Maryland, but then got a job in Boston this week. Not rf, but I really needed a job, so I took it. I have already had a few rf related courses and have done some rf technician work. I am in Lynnfield MA. My job is in Boston. If anyone is interested in this type of club, please let me know. I have alot of good ideas that I really want to try.

Sincerely,
Vipul Shah

>>I will be attempting to start a club for the purpose of experimentation in

I don't know if this will help but I have the Alinco DJ-580. I think the difference between the 2 was that they made it harder to mod for cell receive in the 582. All I had to do was remove the battery pack. Locate the 4 small screws for the battery clip and remove them. Find 2 long wires, 1 red and 1 blue. Cut both wires and tape them so that they don't make contact inside the radio. Push them back in and put the radio back together. Then reset the memory. This will give you AM air band, TX/RX on the rest and RX in the 800.000 MHz band. I don't know if it will work for the 582t but you could try it.
I hope I was of some help.

Breaker 1 nine: I think we've got us a convoy. Thats a big 10-4 rubber duck..... Very educational conversatioin here.. The conversations I have heard on amateur radio are usually searches for parts for their radios. I bought a crystal police scanner for $5. Put a new electrolytic in it and turned it on for some anit-crime action. Dead as a rock.. They've all gone to digital trunk systems. Makes a good weather radio if you can stand listening to a computer try to talk english. Marko

I have an AMD K6-2 500 mhz CPU with cooling fan, BRAND NEW. I bought this from Ebay because I had a problem with my computer, but after buying, I decided to upgrade instead, so I don't need it. The CPU and fan are UNUSED.

Selling for $40 or willing to trade for an external PL tone encoder (ie: Comm Spec) or possibly an older scanner, capable of at least picking up into the 500 mhz area. Email me if interested.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1357777859

Compact, excellent amplifier for 2 meter operation. Check out these features: 80 watts output for 10 watts input; 15 watts output for 200 mw input, 30 watts output for 2 watts input All modes, FM, CW and SSB Preamp, Carrier operated relay or can be keyed via accessory connector Runs on 12 - 13.8 volts, includes power connector.

If you are looking for a 80 watt "brick" look no further...this is the amp for you!

I recently bought this amp and didn't even use it because I found a 100 watt amp, which will better suit my needs, so I am selling this one. Fully functional with the power cord.

"Starphire Technologies releases a free version of its web site management software SiteSage 4.0 for Amateur Radio clubs"

Clearwater Florida - June 7th, 2002 - Starphire Technologies announced today the release of a special free version of its web-based content management software, SiteSage(TM) 4.0, designed to provide enhanced management of Web content without the need for HTML proficiency or outside technical resources. This special version is being made available at no charge to non-commercial Amateur Radio Clubs and amateur radio Public Service Organizations.

"Starphire is making this special release available as a way to give back to the community and support amateur radio organizations" said Michael Murdock, president & CEO of Starphire Technologies and amateur call sign K4NW. "With the capabilities of SiteSage clubs can improve their communications process by permitting non-technical members the ability to manage the group";s web site. With the new visual "Browse-To-Build"; feature web site maintenance is unbelievably easy - anyone who can navigate the web can manage the entire web site."

The Clearwater Amateur Radio Society currently uses SiteSage 4.0 for their clubs web site at www.carshamradio.org. "SiteSage has significantly improved the quality and ease of maintenance for our web site and allows us to make updates from anywhere" says Paul Knukpe (N4PK) Webmaster of the club site.

SiteSage 4.0 is entirely server based, with no special client computer requirements other than a web browser and an Internet connection. This permits updates to a web site to be made from work, home, or the public library if need be.

To receive a copy of this software for your amateur radio club simply contact Mike Murdock at k4nw@arrl.net.

Based in Clearwater, Fla., Starphire Technologies (http://www.starphire.com) develops, markets and delivers innovative technologies for content management. The core product is SiteSage, a proven platform for delivering Web content management and controlled editing rights to non-technical staff, without the need to learn HTML.

Am wondering if there is anyone in Boston , Ma. area that has cloning
cable for Alinco
DJ--V5 handheld-----id like to hook up to my DJ--V5 -----especially if
you have many of the Boston area amateur radio and police frequencies
programmed in.
Thanks

```

Is anyone else having this problem with the ARRL Website? When I click on the 'drop down menu' selections (e.g. Operating Activities, Licensing, etc.) nothing happens and I get a message 'error on page' at the bottom of the window. The details of the error simply say 'Object Expected'.

At first, I suspected my firewall (ZoneAlarm) or my ad-scrubber (WebWasher). However, I closed both those programs and did a clean refresh (Shift/Refresh), but still get the same error.

I contacted ARRL Tech Support, but they seem stumped too. Any help out there?

Thanks.

Craig

Craig, you did not say what browser you are using. Check browser options
and turn off Java debugging and check that the java vm is current.

Steve

New replacement bezels for the rarest of the rare Hallicrafters SX-88 receiver are now available. Perhaps twenty percent of the known SX-88s have the warped bezel syndrome. There is no way to repair a bad bezel and this newly manufactured bezel solves the problem. They are machined out a solid piece of aircraft aluminum on a CNC machine. All the threaded holes, retaining tabs, openings, tapered faces, and openings are true to the original. They are finished in a wrinkled black satin powdered finish.
NOTE: I am not making the bezels. I'm just acting as a facilitator. Bezel will be securely packed and shipped from California. A certain number of bezels must be sold before the second run of 20 can be authorized. Money orders and Pay Pal will get priority shipping when the bezels are available. Personal checks will clear before shipping. If a sufficient number is not ordered then payments will be returned. For questions or pictures contact me directly at gharmon@idworld.net. Seller will pay CONUS shipping. Out of country buyers will pay the difference.

Thanks and 73,

Amateur Radio Newsline™ Report 1294 - May 31 2002

Amateur Radio Newsline report number 1294 with a release date of Friday, May 31st 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. An airline pilot playing pirate radio operator finally gets caught and a tank you from the FCC to those who solved an R-F-I case. These stories are first on Amateur Radio Newsline report number 1294 coming your way right now.

(Billboard Cart Here)

**

ENFORCEMENT: AIRBORNE UNLICENSED STATION BUSTED

Hams down-under have busted an unlicensed operator who was not only on the air, but also in the air. Rick Wornett, P29KFS, reports from Port Morsby:

--

For many years a non-qualified person has used the callsign P29VS from locations all over Australia. When you find this unlicensed operation extending to aeronautical mobile mode and being used all over Australia, even the most un-informed amateur must start to ask questions.

But no. For years this pirate operation has gone un-reported by VK amateurs, many of whom talked daily with P29VS at either a fixed location in Victoria or aeromobile from various jet routes across Australia. None of these licensed amateurs, supposedly aware of the terms of their license and the limitations of operating with a foreign call, ever queried the use of a P29 call in Australia.

In view of his long and un-challenged operating history, it is only fitting that the pirate should be closed down by P29 amateurs monitoring, providing evidence and insisting that something be done by your ACA.

First heard some years ago while mobile over Western Australia, the callsign was monitored recently and consistently on Tony's net on 14mHz. The P29 radio society queried PNG's administration and was informed that the call had never been issued. In fact this had been determined long ago when an attempt was made to have a PNG license issued. Further work including recordings of callsigns and place names identified the operation as being within Australia. Action taken by the ACA in Victoria has now terminated the operation.

For Amateur Radio Newsline, I'm P29KFS Rick Warnett, IARU chairman P29.
--

The airline that the unlicensed operator works for was not revealed. (Q-News)

**

ENFORCEMENT: A BIG THANK YOU FROM THE FCC

Back on this side of the Pacific, FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth is saying thanks to some ham radio operators, some corporations and the ARRL. He says that they all worked together to solve a long standing interference issue in the Cincinnati Ohio area:

--
AUDIO REPORT ONLY: Hear it by downmloadingf the MP3 version at www.arnewsline.org.
--

Hollingsworth says that this was a very complex case and that everyone worked very diligently to resolve it.

**

RADIO RULES: FCC WILL HEAR PETITION FOR REVIEW ON CC&R”S

Lee McVey, W6EM, tells Amateur Radio Newsline that the FCC has decided to consider his Petition for Review of the Dismissal of the ARRL Application for Review of RM-8763 which he filed in January. The Bradenton, Florida ham says that this will offer the Commission to take another look at the CC&R issue now that preemption has also been extended to two-way Internet services. This, because many such services cannot function effectively without an outside antenna.

McVey says that although the regulations only permit opposition comments on his Petition, he would appreciate receiving any and all replies to opposition comments. Send them by e-mail to lee.mcvey@prodigy.net. More information is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-222345A1.doc

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the KC2DAA repeater serving Mt. Beacon New York.

(5 sec pause here)

**

RESCUE RADIO: HAMS ON THE FIRE LINES IN NEW MEXICO

Ham radio has been aiding with communications as a wildfire -- dubbed the Borrego fire -- races across the New Mexico highlands. According to Amateur Radio Newsline’s Jay Miller, WA5WHN, in Albuquerque, the 145.19 repeater atop Pajarito Mountain played a key role during evacuations of the towns of Cordova and Truchas. This is the very same repeater used during the fire in Los Alamos.

Jay reports that at one time over 40 members of New Mexico Search & Rescue has been placed on standby for this fire. Almost all are hams with equipped with mobile High Frequency, VHF and UHF voice as well as A-P-R-S capabilities.

Bill Kauffman, W5YEJ, was is the New Mexico Emergency Coordinator. He has been on the 145.19 MHz repeater assisting in communications and logistics. Meantime, Lonnie Scott, AH2AZ, from Santa Fe coordinated efforts at the Emergency Operations Center that was opened in the town of Espanola with Dave Clark, KJ5KG, and Terry Morton, N5XDF, at the Chimayo Elementary School. The evacuation order for Truchas was finally lifted on Thursday May 23rd. (WA5WHN)

**

RESCUE RADIO: ARRL ATLANTIC DIVISION NAMES AWARD WINNERS

Hams from three ARRL Divisions will be honored for their volunteerism following the September 11th 2001 terrorist attacks in New York City and Washington D.C.

According to the ARRL Letter the 2002 Atlantic Division Amateur of the Year Award will be jointly presented to the amateurs of the Maryland-District of Columbia Section, the Western Pennsylvania Section and the ARRL Hudson Division. All three activated their emergency communications systems immediately following the attacks. The Pennsylvania group handled communications where a jet that was highjacked crashed when passengers decided to act against the terrorists.

The Atlantic Division awards committee has also named Bob Arnold, N2JEU, to be recipient of it’s Technical Achievement Award. As previously reported here on Amateur Radio Newsline, Bob Arnold operates the "N2JEU's Web Controlled Shortwave Receivers" from its home in cyberspace at www.ralabs.com/webradio. (ARRL Letter)

**

RADIO RULES: VEC'S TO MEET – YOUR INPUT WANTED

John Creel WB3GXW tells Amateur Radio Newsline that the annual conference of the nations Volunteer Examination Coordinators is scheduled for July 26th in Gettysburg Pennsylvania. This is the annual gathering where the majority of the VEC' meet with the FCC to discuss the all volunteer testing system and the way it can be improved.   (WB3GXW)

**

CONVENTIONS: DAYTON AND THE APRS GANG

APRS was a big hit at the recent Dayton Hamvention and the man who made the mode happen was there to talk about it. A-P-R-S developer Bob Bruninga, WB4APR, talked with Amateur News Weekly's Jack Parker, W8ISH:

--

The APRS booths at the Dayton Hamvention were always crowded with amateurs seeking new information on the fast growing automatic position reporting system.   Bob Bruninga-WB4APR has been refining the technology for more than a decade. With public service in mind Bruninga says DTMF tones can be used to further expand the APRS system.

Bruninga: "What we are introducing this year is APRs using touch tones. So you can do that with any walkie talkie. So show up at your event and want to report that you are at mile 13 in the marathon you enter a couple of digits and 13 and that tells everybody. The computer will receive and convert that to an APRS position report showing you at mile marker 13."

At special events, voice nets often become busy. APRS can relieve congestion.

Bruninga: "We hope by having the touch tone capability that everyone out there can enter data. And that keeps traffic off the voice net which could be handled with a couple of key presses."

Bruninga has the DOS version ready to go. He's now looking for help on other versions.

Bruninga: "I am writing it in DOS to show people what it can do and am encouraging anybody to write it for a soundcard software because then it's totally software."

Newly developed software and the growing popularity of APRS style radios are helping to expand the automatic position reporting system. Bruninga says the marriage of aprs digipeaters and the Internet make it a global communications and information system.

Bruninga: "So, really what aprs is these days is a world wide packet distribution system for real time communications.”

Reporting from the 2002 Dayton Hamvention, this is Jack Parker, W8ISH.

--

More on Hamvention 2002 in future Amateur Radio Newsline reports. (ANW)

**

HANDI HAMS: NEW PROMOTIONAL TAPE AVAILABLE

The Courage Hamdi Ham System says that it now has a ham radio tape available to blind members who want to promote amateur radio in the blind community. The presentation covers the basics of what ham radio is and why it is a fun and useful activity. The tape is free to Handi Ham members for the asking. For more information contact Handi Ham director Pat Tice by e-mail to wa0tda@arrl.net. To get on the text-only Handi Ham Newsletter distribution list send and e-mail to handiham-request@cs.vassar.edu. In the subject line simply put the word “subscribe.” (Handi Hams)

**

RADIO RULES: PART 15 AMENDED TO PROMOTE THE DEVELOPMENT OF HIGH SPEED WIRELESS DEVICES

Turning to regulatory matters, the FCC has amended its rules to promote new digital transmission technologies for high-speed wireless communications. Specifically, the Commission has modified Part 15 of its rules to permit new digital transmission technologies to operate in the 902 to 928 MHz, 2400 to 2483.5 MHz and 5725 to 5850 MHz bands.

(DO NOT READ: The complete document is on the FCC website at fcc.gov/edocs_public/attachmatch/DOC-222567A1.doc (Tnx CGC Communicator))

**

RADIO RULES: TV "CARS BAND" TO BE SHARED

The FCC has also adopted a Report and Order that has expanded the eligibility for licenses in the Cable Television Relay or CARS service to all Multichannel Video Programming Distributors. Now, Private Cable Operators, Direct Broadcast Satellite Operators, Open Video Systems, and others who provide multiple channels of video programming can join Cable Television Systems and Wireless Cable Systems in using CARS microwave frequencies to support their video programming distribution needs. This one can be found at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-222569A1.doc (CGC Communicator)

BREAK 2

From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

SCIENCE NEWS: PERIODIC EARTHQUAKES DETECTED BY RADIO GPS

Turning to the radio science page. Were you aware that once every 14 months or so, portions of coastal British Columbia and northwestern Washington State experience an ultra-slow ground motion? Or, that if released all at once, this motion would generate an earthquake measuring more than 6 on the Richter scale?

Well that's what data from a network of G-P-S equipment spanning the region show, say scientists who presented their findings in the April meeting of the Seismological Society of America, held in Victoria, British Columbia. Thankfully, these "silent earthquakes" are so slow that no one notices them, and no structural damage occurs.
More information is on the web at
http://www.sciencenews.org/20020427/fob4ref.asp (CGC Communicator)

**

SPACE AND SCIENCE: AQUASAT LAUNCHED

NASA's Aqua spacecraft, which will orbit the Earth for six years and use a JPL-managed package to collect water cycle data has been launched from Vanderberg Air Force Base in California. The 6,248-pound spacecraft was lifted into space on board a Boeing Delta II rocket. The satellite is equipped with JPL's Atmospheric Infrared Sounder instrument and will provide scientists with information on changes in ocean circulation, global precipitation and how clouds and surface water processes affect the Earth's climate. (ANS)

**

INTERNATIONAL-UK: HAM RADIO WILL HELP CELEBRATE QUEEN ELIZABETH’S GOLDEN JUBILEE

United Kingdom Amateur Radio operators will help to celebrate Queen Elizabeth's golden jubilee. Jeramy Boot, G4NJH, has more:

--

Commencing next Saturday the 1st of June, the Scarborough Special Events Group will be on the air for 30 days as GQ0OOO to commemorate the Queen's Golden Jubilee. Activity will be on all HF bands, two metres and 70 centimetres, using SSB, CW and PSK31. A special full-colour souvenir QSL will be issued to mark the occasion. Cards may be sent via the bureau or direct to club call G0OOO.
Jeramy Boot, G4NJH

--

But that’s not all. According to the R-S-G-B, all U-K amateurs will be permitted to use the G-Q prefix " during the month of June to commemorate the Queen Elizabeth's accession to the royal throne. (GB2RS)

**

SPECIAL EVENT STATIONS: AM ON THE AIR FROM HAMCOM

If you are one of those hams who still gets a thrill when you hear full carrier A-M transmissions, listen up. This one is for you.

Bob Peters, K1J, reports that Chapter 207 of the Quarter Century Wireless Association is sponsoring an A-M special event station. This, at the HAMCOM convention in Arlington, Texas on June 7 and 8.

Peters says that station W-5-A will be located in the commercial exhibits area and will operate on 3.880 MHz and 7.290 daily from early morning until about 5 P-M both days. He says that anyone attending HAMCOM is welcome to drop by and operate. If you can’t but do make contact on the air, a joint Q-C-W-A and HAMCOM QSL will be available for an S-A-S-E. Follow the Q-S-L directions given on the air.

Again that’s station W-5-A on A-M from the Arlington Convention Center June 7 and 8. (QCWA)

**

ON THE AIR: VHF/UHF REPEATER QSO PARTY

Bob McHugh, N4BM, says that the Wichita Amateur Radio Club in Kansas is trying something new. At least new to the United States. It is an operating event in the form of a VHF and UHF Repeater QSO Party which has already met with great success down-under.

According to McHugh, the rationale behind the repeater QSO Party is to get newer hams and more experienced hams on the air at the same time and in the same place. This, to exchange ideas and operation techniques.

McHugh sent along a copy of the rules for the event. We have no way to list them here but if this idea interests you, contact him by e-mail to n4bm@arrl.net (N4BM)

**

DX

In D-X, VK8HA says that the war in Afghanistan may have removed an irritant from the air. According to Henry, when the first bunkerbuster bombs were dropped near Kabul, a rather strong signal on 14.180 appears to have been blown off the air.   And V-U-2-U-R adds that that a broadcast station on 7.085 MHz also went off the air at the same time. This leads to speculation that the two transmitters were at the same location.

A lot higher in frequency, there is a new 432.300 Mhz CW beacon now in operation near Sausalito, California. It signs the call K-6-E-R and runs 2 watts into a horizontally polarized antenna. The K-6-E-R Beacon is located in grid square C-M 87 at 1125 feet above sea level.

Lastly, word that G-4-H-C-L who was due to travel to Yemen, on Wednesday the 22nd of May, has postponed his trip. This, due to illness in his family. G-B-2-R-S reports that he was slated to operate from Yemen as 7-O-1-C-L. (From various DX sources)

**

THAT FINAL ITEM: HAM RADIO LICENSING IN ZL

And finally this week, we take another look at the new simplified path to becoming a ham radio operator in New Zealand. We take another look through the eyes of Q-News Graham Kemp, V-K-4-B-B:

--

In ZL from October 2001 there were only two grades of amateur radio licence, Limited and General. In the early 1990's, the New Zealand administration devolved the examining and testing for the Amateur Radio Examination to NZART, the New Zealand Association of Radio Transmitters (Inc.)

The examination paper has 60 multiple-choice questions taken from a 600-question public-domain question-bank. Seventy of the 600 questions are devoted to the Radio Regulations, twenty to the Frequency bands and ten to the Q-code. The remaining five hundred are about electronics, radio communications and operating. The results are given before the candidate leaves the examination site.

--

Kind of sounds a bit like the way we in the United States have been testing candidates since the introduction of the all volunteer testing scheme, well over a decade ago. (Q-News)

I'm still relatively new to packet and APRS, so I'm not familiar with all of the commands that exist in the APRS protocol. Hopefully someone can help me out with a few questions that I've come up with over the last couple of days.

First, can someone explain how to "ping" another APRS station or an APRS digipeater? What I mean by "ping" is that I'd just like to know whether or not my signal is being picked up by a specific station or digipeater. Also, if I'm operating my mobile APRS station from a location where I'm not sure of the digipeater layout, is there some type of general "ping" message that I could send out to see if there are any other APRS digipeaters in the area?

Also, in looking at APRS messages that have come across my station, I've noticed two words that are occasionally used in APRS address lines, "BEACON" and "TCPIP". Could someone please explain these and how/why they are used in an address?

Thanks!

If my understanding is correct......

If TRACE is included in a station's UNPROTO path, the command ?PING? can be sent in a message to that station, and the return path will be sent back as a reply.

I am sure someone else can give a better description.....

Amateur Radio Newsline™ Report 1295 - June 7 2002

==

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone.

Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. Free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

Amateur Radio Newsline report number 1295 with a release date of Friday, June 7th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Kids Day is coming and a legend leaves Top Band. These stories are first on Amateur Radio Newsline report number 1295 coming your way right now.

(Billboard Cart Here)

**

ON THE AIR: KIDS DAY COMING JUNE 15TH

It’s possibly one of the two mot important ham radio days of the year, and its only a week away. We are talking about the second of two Kids Day operating events held every year. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has the story of the event and the man who made it happen:

--

The next Kids Day is June 15 from 1800 to 2400 UTC. Thats Saturday here in the United States. Most of the activity is on 20, 15 and 10 meters, but you can also put kids on the air on your local repeater if you wish.

Kids Day is not a contest. In fact, it is a non structured event where all you have to do is to call C-Q Kids Day, and then put the youngsters visiting you on the air to talk with other kids visiting other hams. Once the children are talking,the suggested contact exchange might include the youngsters names, their ages, their location and -- for the younger ones -- favorite color. Best of all you can work the same station over and over again if the operator continues to change.

If this all sounds like a great way to spend a day, you might be interested in learning ewhere Kids Day came from. In reality is the story of vision by one man. A man who long before most relized a problem even existed.

It was Larry “Tree” Tyree, N6TR, who recognized that ham radio had no future without a steady influx of new, young hams. Kid hams filled with the wonderment of childhood. That thirst we are all born with to “learn.” To “experiment.” To find out how this or that “really works.”

But Tree Tyree did not just sit there and say let somebody do something. Working woith Oregon’s Boaring Amateur Radio Club, he went out and did it himself. And in creating Kids Day, N-6-T-R, probably established the most important “ham radio holiday” that we have.

“Kids Day.” Just think what it really means. It two days every year where we “grown-up” hams open our hearts, minds and stations to the young. We invite them in. We put them before a mic or key. We put them on the air to experience first hand the “magic” of radio. Then we silently pray they some of them will knock on the door again and say: “...can we talk on the radio again?” When that happens, we know that ham radio’s survival is insured for yet another generation.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

The first Kid's Day event was held on December 2, 1994 but it was, N6TR, who took “Kids Day” from a dream to a twice yearly reality now sponsored by the A-R-R-L. And in doing so Larry “Tree” Tyree N6TR figuratively “paid the premium” on the life insurance policy that is Amateur Radio. (ARRL, ARNewsline™, W6AQ)

**

RESCUE RADIO: NEW MEXICO WILDFIRE EMERGENCY FOLLOW-UP

More this week on the role that Amateur Radio operators in New Mexico played as a wildfires raged in that state. As reported last week, hams were called out as soon as the fire emergency was declared. Now, the ARRL Letter provides some in depth follow-up.

The Letter says that on May 23rd, an incident command post was set up in the town of Espanola in response to a so-called "sleeper fire." This is a lightning-caused fire that smolders before bursting into flame.

This one erupted near the village of Truchas in north-central New Mexico. Over the Memorial Day weekend, more than 250 residents were evacuated from their homes in Truchas and the nearby village of Cordoba.

Rio Arriba County Emergency Communications Manager Lonie Scott, AH2AZ, activated amateur communications support. Amateurs were dispatched to Red Cross shelters set up at two elementary schools in Chimayo, and The Los Alamos Amateur Radio Club's W5PDO system provided support.

By late on May 24, the wind had shifted. The fire was burning away from Truchas. Residents were able to return home starting at 9 AM the next day. New Mexico Section Emergency Coordinator Bill Kauffman, W5YEJ said the incident command post and the shelters closed later that day after all evacuees had returned home.

As of May 29th the fire was still burning in the Pecos Wilderness area of the Santa Fe National Forest, but was not considered a threat to any homes or structures. But as tinder-dry conditions persist across the South-West, amateurs remain on alert in case more wildfires break out. (ARRL)

**

ENFORCEMENT: PIRATE BROADCASTER BUSTED IN PUERTO RICO

Turning to the regulatory arena, the Federal Communications Commission has announced that an investigation by the it’s Enforcement Bureau has led to the seizure of unlicensed broadcast radio equipment allegedly operated by Amil Lugo-González.

The station had been operating on 99.5 MHz from Jayuya, Puerto Rico. The FCC San Juan Office, working in conjunction with the United States Marshals Service and the Office of the United States Attorney for the District of Puerto Rico, seized the equipment on May 21st. The FCC says that on more than one occasion it had issued notices to Lugo-González directing him to cease operation of the unlicensed station. (FCC)

**

ENFORCEMENT: SHORT TERM RENEWALS GRANTED

Meanwhile, two radio amateurs have been given short term renewals of their Amateur Radio licenses. The FCC’s Riley Hollingsworth tells us who they are and the reason each is getting a shortened license term:

--

Hollingsworth: : “A short term of an upgrade to Extra class was given by the Wireless Bureau to Sam Jacobs, K3SAM. The grant was short term due to previous problems involving the filing of a club call sign application.

And, a short term renewal was given to Peter Figuroa, N6IWH, of Berkeley California. Figuroa had been on the Amateur Bands after theexpiration of his license but there were some extenuating circumstances.”

--

In both instances, two year license renewals were granted. If there are no other enforcement issues with either Jacobs or Figuroa over the next two years, each can apply for a full 10 year license renewal in 2004. (FCC, RAIN)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the AF4CY repeater serving Madison Virginia.

(5 sec pause here)

**

CHANGING OF THE GUARD: THE 160 METER GATEWAY NET GOES QRT

A longtime fixture on Top Band has gone silent. This as Vern Jackson, WA0RCR, announces that he has terminated operation of his famed 160 meter Gateway Net. Here is the announcement as Jackson himself made it:

--
AUDIO ONLY REPORT: HEAR IT AT WWW.ARNEWSLINE.ORG
--

Over the almost quarter of a century that it existed, Jackson’s net presented some of the top news and information sources in ham radio. This includes Hap Holly’s Radio Amateur Information Network and Amateur Radio Newsline, all in high fidelity A-M. (WA0RCR)

**

THE VEC SYSTEM: NEW TECHNICIAN SYLLABUS RELEASED

The Question Pool Committee of the National Conference of Volunteer Examination Coordinators has released the revised Technician Class Element 2 Syllabus into the public domain. This syllabus will be used to develop the new question pool for Technician Examinations going into service on July 1st, 2003. All amateurs are encouraged to submit candidate questions to the Question Pool Committee by this coming September 15th.

Now before you sit down to dream up new questions there are some strict guidelines that must be followed. All proposed questions must be no more than 210 characters in length. This includes all spaces and punctuation. All answers and distracters no more than 140 characters including spaces and punctuation and you must identify both the syllabus area and the correct answer. Also, if the question is rule based, identify the exact reference in the Part 97 Amateur Service rules.

Candidate questions should be sent via e-mail to QPC@arrl.org. The complete syllabus will be posted to the ARRL website within the next few days. (W4WW, NCVEC)

**

REGULATORY: JOINT U.S.- MEXICO COMMISSION MEETING CONCLUDED

Call it radio regulation on an international level. This with an announcement that the FCC’s Enforcement Bureau recently took part in the 26th formal meeting of a regulatory body known as the Joint United States and Mexican Commission.

The Joint Commission, formerly known as the Mixed Commission is made up of representatives from the United States and Mexico.
The latest meeting took place in Mexico City during the week of April 22nd. During the gathering the group reviewed 115 cases of harmful radio interference in the United States and Mexican border zone. Of these, 47 were officially closed. A report is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-02-1063A1.doc (CGC Communicator)

**

REGULATORY NEWS: FDA WEB AGE ON RADIO FREQUENCY HAZARD FROM CELL PHONES

The Food and Drug Administration and the Federal Communications Commission have established a joint web page called "Cell Phone Facts." This, in an effort to provide reasoned answers to the public's never ending health and safety questions concerning the radio frequency power produced by portable cellular and PCS phones, and their base stations. The site is in cyberspace at www.fda.gov/cellphones (FDA, FCC)

**

CONFERENCES: ARRL/TAPR DIGITAL COMMUNICATIONS CONFERENCE

Technical papers are solicited for presentation at the 21st Annual ARRL and TAPR Digital Communications Conference. The event will be held September 13th to the 15th in Denver, Colorado.

The annual conference proceedings are published by the ARRL. Presentation at the conference is not required for publication. Submission of papers is due by August 5th. Conference registration details and updates, along with more information are in cyberspace available at www.tapr.org/dcc (TAPR, ARRL, ANS)

**

HONORS: CQ MAGAZINE ADDS TO HALLS OF FAME

Forty-four new members have been added to the CQ Amateur Radio Hall of Fame, while the CQ Contest Hall of Fame and the CQ DX Hall of Fame each grew by one member. This, with OZ1LO being honored by his fellow contesters and W0AR being recognized for his accomplishments in DX'ing. The announcements were made at the recent Dayton Hamvention. A complete list of winners is in cyberspace at www.cq-amateur-radio.com in the "announcements" area. (CQ)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

EMERGING TECHNOLOGY: THE NEW E-MAC

Apple Computer has unveiled a new line of computers exclusively for educators and students. Apple says the new e-Mac will feature 17-inch monitors and high speed G4 processors. The e Mac is slightly smaller than the iMac and includes stereo speakers and a CD-recordable drive. The price for the new e-Mac machines will begin at 999 dollars. (Appple press release)

**

HAM RADIO IN SPACE: BOY BAND MEMBER MAY NOT MAKE IT TO SPACE

Possible problems for a boy-band member who wants to fly in space. The latest news reports quote the Russian Space Agency as saying it has no contract in hand to carry 'N Sync's Lance Bass to the International Space Station.

As previously reported here on Amateur Radio Newsline, Bass has made public his wish to visit the I-S-S. He has already made a trip to Russia to undergo medical tests in preparation for a seat on an upcoming flight.

As of airtime, its not known if Bass has been approached regarding his getting an Amateur Radio license and taking to the ham radio airwaves if he does get to make the trip. (Published reports)

**

INTERNATIONAL – CANADA: NEW RAC CANADA DAY CONTEST MANAGER

Radio Amateurs of Canada Contest Manager Joe Mac Pherson, VE1CH, has announced that the Moncton Seniors Amateur Radio Club has taken over responsibility for the management of the R-A-C Canada Day contest. This, effective immediately. Mac Pherson says that all inquiries or electronic logs related to the R-A-C Canada Day Contest should be directed to ve9qed@rac.ca. Non-electronic logs, for the RAC Canada Day contest should be mailed to the Moncton Seniors Amateur

Radio Club at Post Office Box 73, Moncton, New Brunswick, Canada. The postal code is E1C 8R9.

**

INTERNATIONAL - GIBRALTER: RESTRUCTURING AND A NRE LICENSE CLASS

License restructuring is coming to Gibralter. Peter Naish, VK2BPN in Australia has been advised by Wilfred Guerrero that Gibraltar will be introducing the New Foundation Licence by mid-June. Guerrero, who is the Secretary of Gibralter Amateur Radio Society says that the new llicense will be similar to the highly successful Foundation License recently put in place in the United Kingdom. The prefix to be used will be ZB3. (Q-News)

**

DX

The 6 meter D-X season seems to be here. Jay Kesterson, K0GU in Colorado reports over the VHF Reflector on some very early season E skip openings to Europe. Jay notes that on June 4th at 15:14 UTC he heard the EN19 beacon. He then checked for European video signals and was surprised to hear many of them on and near 49.750 MHz. Jay says that some were S 9 plus 20 d-b. He then worked SM3UZS at 15:50 U-T-C followed by OH7PI at 16:45. (VHF Reflector)

Still with 6 meter D-X news, word that St. Paul Island should be on the air late June 29th through July 9th. According to Herb Spoonts, W3IWU, the operation will feature a full time, dedicated six meter station operated by W7XU, N0QJM, W0SD and W0OE. Herb says that the six meter station will only transmit on 50.157 MHz listening up 5 kHz and more when needed. Liaison will be on 28.885 MHz and updates will be provided to the appropriate Six Meter Internet sites and reflectors. St. Paul Island holds the prefix CY and is located in Grid Square will be FN97. QSL via W7XU. (Via E-Mail)

On the High Frequency bands, GB2RS reports that JH0IEW/JD1 and JE0EHE/JD1 will be active from Ogasawara Island through the 16th of June. They will be operating on 80 through six meters, including the WARC bands on SSB and CW. QSL to home calls or via the bureau. (GB2RS)

Also, keep an ear open for W5AA slash TI8 from Costa Rica until the 17th of June. He will operate on all bands with an emphasis on 30, 12 and 17 meters. QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: ATOMIC COFFEE MAKER

And finally this week, if you are a ham who has trouble waking up to keep those wee hours D-X schedules, the answer may be as close as the local appliance store. How about an atomic time coffee maker?

No, we aren’t kidding. We discovered this one last week in an appliance store in the Ft. Lauderdale Florida area. It’s called the Perfect Time

Coffeemaker, and according to its manufacturer Melitta Salton Inc, it’s the first such device using radio frequency reception of atomic clock signals to keep it in sync with the National Bureau of Standards time keeping system.

Melitta Salton claims that the internal clock provides accurate time right out of the box by monitoring the WWVB broadcasts from Boulder Colorado. All the user need do is to select his or her time zone and the coffeemaker does the rest. It even automatically adjusts to Daylight Savings Time and its internal back-up batteries keep it going during short duration power losses. Salton also says that it also brews good coffee. And what more could any D-X hound ever ask for. (ARNewsline/4)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

This final note. The nominating period for the 2002 Amateur Radio Newsline Young Ham of the Year award closed on May 30th. The nominating forms are on their way to the judges. Their decision will be announced in early July.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Robert Sudock, WB6FDF, saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Thanks Steve...we may be on the right track here because these drop-downs are identifed as javascript menus. However, I'm going to need your help here. My browser is IE 5.5. My options do not include a choice to turn java debugging on/off. What is Java vm? How do I find out if it's current? If it's not, how do I get it current?

Thanks. Craig

I am selling an AMD K6-2 500mhz CPU and fan. I bought these recently
on the internet because I had a problem with my old computer. After

buying them, I decided to just upgrade completely, so now I don't need
them. I am selling them for $40 or willing to trade for ham radio
gear. Please email me directly if interested.

The current build of the Java Virtual Machine (the vm) can be downloaded
from the microsoft site at:

http://support.microsoft.com/default.aspx?scid=kb;en-us;Q163637

The debug enable/disable is in the IE Tools/Internet Options/Advanced
menu

Hope this helps.

Steve

Field day is fast approaching and this year I want to take my both HF radios - Kenwood TS-440S and Alinco DX70TH But I want only one power supply and one power cable. I have a Kenwood PS-50 which I normally use on the 440 and am wondering if I can use it to power the Alinco as well.

Thanks
John

Double check the power ratings of both radios and if combined they don't
equal 50amps you should be all set. Gary/WR1U

"provide relief to amateurs prevented by private deed covenants, conditions
and restrictions--CC&Rs--from installing outdoor antennas."

What exactly is a CC&R? I don't own a house, or any land for that matter,

so I imagine this wouldn't apply to me.
If I did own a house, what benefit would I get from this bill? Can anyone shed some light for me?

Thanks

It stands for "Covenants, Conditions, and Restrictions". This is a mutually agreed to contract entered into by private parties when buying property, which defines the scope of use of the property. Most CC&R's today have explicit restrictions on the installation of antenna systems, which pretty much eliminates effective Ham radio use of the property.

Although this bill is a great idea if they can get it passed, I don't think it could vacate or modify any preexisting contracts (perhaps a real estate lawyer might comment here?). It might be of help to the purchaser of a new house, but I would think current property owners will still be bound to whatever contractual conditions they have already agreed to - unless they can get the other party(s) of the original contract to agree to modify it.

Bill or no Bill, the best policy when buying property is to *read the fine print* BEFORE you sign. If the defined use of the property doesn't fit your needs,then don't buy it. It's pretty hard to argue in court against a contract that you voluntarily agreed to. A lot of people I know didn't even request a copy of the CC&R's and local zoning ordinances for review before they bought their property!

When I bought my current house, I had my lawyer research all of the local ordnances, existing CC&R's, etc., and had a specific paragraph added to the purchase contract specifying that there were no existing limitations or restrictions on the installation of antennas or antenna support structures. I have been here for four years now, and my antenna farm is growing nicely... :>)

As long as you only transmitt on one rig at a time you will be fine.

It depends -- if you owned a home and when you bought the home you
were stupid enough to buy the home without reading the title
documents and thereby signed a binding legal contract not to have
antennas, this bill would cover up your stupidity and let you have
antennas with no regard for the legal obligations you freely agreed
to and no consideration for your neighbors who had previously
thought you were honest and respectable.

Every amateur should know and tremble at the history and origins of this
fearsome instrument for the punishment of amateurs who cultivate bad
operating habits and who nourish and culture their meaner instincts on the
air.

It was invented--or at any rate, discovered-by "The Old Man" himself, just as amateurs were getting back on the air after World War One. "The Old Man" (who later turned out to be Hiram Percy Maxim, W1AW, co-founder and first president of ARRL) first heard the Wouff Hong described amid the howls and garble of QRM as he tuned across a band filled with signals which exemplified all the rotten operating practices then available to amateurs, considering the state of the art as they knew it. As amateur technology and ingenuity have advanced, we have discovered many new and improved techniques of rotten operating, but we're ahead of our story.

As The Old Man heard it, the Wouff Hong was being used on some hapless offender so effectively that he investigated. After further effort, "T.O.M." was able to locate and identify a Wouff Hong. He wrote a number of QST articles about contemporary rotten operating practices and the use of the Wouff Hong to discipline the offenders.

Early in 1919, The Old Man wrote in QST "I am sending you a specimen of a real live Wouff Hong which came to light out here . . . Keep it in the editorial sanctum where you can lay hands on it quickly in an emergency." The "specimen of a real live Wouff Hong" was presented to a meeting of the ARRL Board and QST reported later that "each face noticeably blanched when the awful Wouff Hong was . . . laid upon the table." The Board voted that the Wouff Hong be framed and hung in the office of the Secretary of the League and there it remains to this day, a sobering influence on every visitor to League Headquarters who has ever swooshed a carrier across a crowded band.

The Old Man never prescribed the exact manner in which the Wouff Hong was to be used, but amateurs need only a little imagination to surmise how painful punishments were inflicted on those who stoop to liddish behavior on the air.

(taken from ARRL)

Anxious to hear from anyone who has had experience with multiple mobile HF
radios in a noisy car.  I would like to know which one(s) seems to have the
most effective noise limiter against impulse noise.

Thanks... Ed, W5EJ

Thanks to those that replied. Pinout on the kenwood looks identical to the alinco dx70 so the ps50 should power each radio (singly of course) just fine. All it took was to find my kenwood manuals buried at the bottom of my pile to be filed and compare the power plugs with the alinco manual. look identical so that solves another fied day problem!!

cya on the air

John

Hi there

A fellow amateur is looking for the pin configuration for the microphone
socket on the Icom IC-V200T. The original mic has gone faulty and he
would like to replace it with a DTMF mic.

He would also like to know how to assign an alphanumeric tag to the
channels so that the tag displays on the LCD.

Thanks in advance!

Regards.

Hi to all,

I received from a friend a Micronta power Supply model No. 22-124. It does not work at all and my guess is that the transistors have been burned out. As the reference has been erased I do not know which transistors are for replacing them.

Anyone could help me providing me the schematics and the transistors reference?

Thanks

Juan

Ok, here goes

Please keep in mind I am not a radio amateur and anything more than gain, and SWR leave me floundering.

I am getting interested in launching weather balloons to a high altitude and taking photographs. Part of the task is sending telemetry data back to a base station so I can track the unit. I am using a Basic Stamp 2sx so generate DTMF tones of the telemetry data at a rate of 5 tones per second.

I want to a cheaply as possible be able to transmit this data line of site (straight down) around 30KM (20 miles). I have a set of Motorola t5100 2 way radios, which transmit 500mw of power in the 467Mhz range. What I would like to know is if it is possible to get this range out of one of these transmitters?

I will be using an Icom IC-R2 scanning receiver to receive the signal, and intend on building a 12 element or so Yagi to use with it. I will need to use some sort of directional antenna for transmitting as there is no point transmitting away from earth.

What sort of transmitter antenna/receiver antenna combination is suitable, o am I asking farr too much out of a 500mW signal.

As an extra note, the motorola T5100 talkabout 2 way radios transmit a modest 2.0- 2.5km line of sight (over water) - they will transmit further, but the quality does weaken dramatically. Using a 2 way radio transmitting and a rubber ducky antenna on my icom IC-r2 scanner, this range increases to about 4km easily, pushing 4.5-5.0km. I assume the standard T5100 antenna to be fairly lossy, and the rubber ducky antenna on my scanner is shown as being a 3.5DB gain at this frequency.

I hope this helps

-John

It's a shame your using NBFM DTMF tones
If it was a Narrow band mode, CW / FSK etc you could get a much better
Signal to Noise ratio to play with
>
> I want to a cheaply as possible be able to transmit this data line of site

Half a watts probably OK, But Not FM with a low gain aerial
a lower frequency will give you a lower path loss

How about a cheap modded SSB CB ? Take the board out of one
(Balloon Radiosondes have worked for years on 27MHz)
Take it up to 28MHz so you don't have Good Buddy skip to contend with
and you could remove the RX section to lighten it some more
It's crude, but feeding tones into the SSB mic input will give you FSK
(and you'll have maybe 10 watts PEP to play with)
>

Again you need a narrow band RX with SSB / CW to go with a TX
with a Narrow band mode
Use another modded SSB CB to RX it
>
> What sort of transmitter antenna/receiver antenna combination is suitable, o

On 28 MHz a 16ft wire dipole, I thought of a 8 ft 1/4 wave wire,
but a balloon won't have a ground plane

If you have an understanding of SWR, then you are doing a lot better than 95% of all radio amateurs (and 100% of M3's)!

The guy said he's not a radio ham, and the

radios he is proposing to use don't operate on
any ham-band (I'm assuming 467MHz is some sort
of New Zealand equivalent to our PMR446 shortrange
walkie-talkies)

There are so many illegal "Freebanders" on the bottom of 28MHz
Who would notice someone sending telemetry ??

Maybe he could ask a local Amateur to "lend" his presence and callsign to the project ?

I'm not sure of the legal situation in NZ but any of the suggestions made thus far would NOT be legal in the UK.

As letting of balloons to a high altitude is not exactly inconspicious I suggest caution. In the UK there are legal i.e. exempt telemetry transmitters you can use- around 175MHz as I recall- I suggest you try and find out if there is a similar allocation in NZ.

Also, what is the situation re balloons- in the UK there are rules regarding this.

I'm not trying to be a kill joy but where does NZ send its convicts these days? (Australia- you would have to drink Fosters, that must be cruel and un-natural punishment)

Hello John

Lets look at the numbers, you gave us; 500mw (Tx), 467Mhz (f), range of 20 miles, a scanner for Rx, and a 12 element yagi for Rx antenna.

I will assume the scanner has at least a sensitivity of -115dBm/.35uv, and that yagi has a gain of 12dBi. Note if these assumptions are not valid, then you can adjust the path loss analysis as required.

Although interesting, your range testing cannot be directly applied to the line of site path analysis. However the range test you performed would tend to indicate the units Tx power output is at or near the published 500mw. Because your application is direct line of sight a simple path or spreading loss computation, and summation of the system component(s) gains is straight forward.

First we have to convert all of the numbers into dB so we can sum them. A Tx power of 500mw = 27dBm, we assumed a Rx sensitivity of -115dBm, the yagi gain at 12dBi, and at this point I will assume a Tx antenna gain of -3dBi.

The equation for free space path loss is 36.6+20logD+20logF, D in miles, and F is frequency in Mhz. We run the numbers and get 116dB spreading loss for an operating F of 467Mhz at 20 miles.

Now we sum the numbers; Tx pwr, Tx ant gain, spreading loss, Rx sensitivity, and Rx antenna gain.

27dB-3dB(i)-116dB+115dB(m)+12dB(i) and come up with a 35dB margin for the 20 mile range you wish to operate. A 20dB margin is considered to yield a reliability factor of 99.9% - looks like the equipment you have is up to the task.

This we haven't discussed in this presentation are antenna beam patterns. You will have to add attenuation to the above path loss for not operating on the main beam of the Tx and Rx antenna. I think the biggest challenge will be keeping the ground receiving yagi pointed directly at the balloon, and oreintation of the Tx antenna in the balloon.

Hope this in some way helps.

Regards, Hugh KF6HHS

Thanks Steve, Everything has been taken in and well thought over. The reason i was looking in the frequency range I was, was because a chappy in california used a 5 watt 440Mhz system and said it was overkill.

The reason I am using DTMF is that it is cheap! Once I have the rest of the equipment sorted out such as GPS balloon and Helium (not cheap), I can't afford spending money on packet radio modems - especially for the first flight, New Zealand is a very narrow country, so a lot of the difficult work isn't getting the balloon up, but controlling the fall back to earth so that the package heads back towards its starting point. Also, a rate of 6 tones per second, 24bps is more than enough when you only need to send around 30 bytes per transmission - it will take 10 seconds to send the data packet, but who cares?? I will transmit continuously updated data by this method.

I am not sure of where to start looking for a 27mhz balloon radiosonde, but I will have a ring around. Someone must know someone who knows someone who knows someons who has a spare one going cheap!

Regards

John Burns

It sounds good and I am all for it. I would also like to see the jammers used to jam the dial a drug cell phone users and in all restaurants and theaters. I do wonder how far they will take it? IE jamming 2 meters and the drug traffickers using HF to coadunate drug shipments from South America.

I have asked this question before and it seems that the Yeasu 100 just barley beats the 706. If you are using polarized sunglasses you have trouble reading the screen on the 706, (I don't know if they fixed that yet). The other big deciding factor in favor of the 100 is the ATAS 100 antenna that is self tunable from 7.000 MHz to up past 440 MHz and the only thing that Icom has is a steel whip and an antenna tuner up to 6 meters. If you don't have the space to grow an antenna farm and you don't want to have to get out of the car to change bands then the 100 is the way to go.

If my memory serves, I believe Riley later recanted this statement saying
the rules do, indeed, provide for giving your call phonetically. I'm sure
50 people will correct me if I'm wrong.

My callsign, W5EJ is almost always misinterpreted as DJ or CJ if I don't use
phonetics.

Ed, W5EJ

Mine ends with ZCE, and I have to go phonetic to get it across clearly.

The phonetics, especially if you stick to the standard ones, are a tool to clearly communicate letters.

To quote Part 97:

�97.119 Station identification.
(a) Each amateur station, except a space station or telecommand station, must transmit its assigned call sign on its transmitting channel at the end of each communication, and at least every ten minutes during a communication, for the purpose of clearly making the source of the transmissions from the station known to those receiving the transmissions. No station may transmit unidentified communications or signals, or transmit as the station call sign, any call sign not authorized to the station.

(b) The call sign must be transmitted with an emission authorized for
the transmitting channel in one of the following ways:

(2) By a phone emission in the English language. Use of a standard
phonetic alphabet as an aid for correct station identification is
encouraged;

*****

My interpretation from that would be that using a standard phonetic
for your call sign is perfectly fine.

Happy trails,
Gary (net.yogi.bear)

How about my old one - KF4KHC. Say that three times fast! :)

When calling on SSB, I usually give my call phonetically, then standard
letters, if there's a chance that someone have have difficulty copying me.

I have a BRAND NEW AMD K6-2 500mhz CPU with fan that I would like to sell for best offer or trade for ham equipment. Not sure what I need, but let me know what you have. I might be interested in a D-104 microphone to hook up to my 2m all mode. I bought this CPU/Fan combo to replace one in my old computer, but then decided to upgrade the motherboard, so I don't need the CPU/fan. Please EMAIL any replies. Thanks!

47CFR15.321 is pretty interesting.

Part 97 relates to Amateur devices and specifically 47CFR97.113 expresses
prohibited transmissions.

CFR 47 Part 97.113 a 5 states that "Communications, on a regular basis, which
could reasonably be furnished alternatively through other radio services." is
expressly prohibited.

This could be interpreted as voice communications only, which was more than
likely put in place to keep people from using the Amateur radio frequencies in
lieu of a telephone over a long period of time.

As for digital transmission, you've got Part 97.309(a) (available at
http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?
TITLE=47&PART=97&SECTION=309&YEAR=2001&TYPE=TEXT
) stating the following:

"(b) Where authorized by Secs. 97.305(c) and 97.307(f) of this part, a station may transmit a RTTY or data emission using an unspecified digital code, except to a station in a country with which the United States does not have an agreement permitting the code to be used. RTTY and data emissions using unspecified digital codes must not be transmitted for the purpose of obscuring the meaning of any communication. When deemed necessary by an EIC to assure compliance with the FCC Rules, a station must:

(1) Cease the transmission using the unspecified digital code;

(2) Restrict transmissions of any digital code to the extent instructed;

(3) Maintain a record, convertible to the original information, of all digital communications transmitted."

See:
http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?
TITLE=47&PART=97&SECTION=305&YEAR=2001&TYPE=TEXT
and
http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?
TITLE=47&PART=97&SECTION=307&YEAR=2001&TYPE=TEXT
for more information regarding 97.305 and 97.307.

It states that at 13cm (2.300 GHz and 2.310GHz and, IIGIR, 2.390GHz and 2.450 GHz) the following emissions are allowed:

(7) A RTTY, data or multiplexed emission using a specified digital code listed in Sec. 97.309(a) of this part or an unspecified digital code under the limitations listed in Sec. 97.309(b) of this part may be transmitted.

(8) A RTTY or data emission having designators with A, B, C, D, E, F, G, H, J or R as the first symbol; 1, 2, 7 or 9 as the second symbol; and D or W as the third symbol is also authorized.

(12) Emission F8E may be transmitted.

Please excuse the link lengths - some of you may have to copy and paste a couple lines into the address bar in order for the link to work correctly.

AND

Then comes the whole discussion about what can and can not be transferred in that spectrum and if the data is considered commercial, obscene, etc.

Plus I want to know who would log all the information on a eminating from modified 802.11 devices.

...what does the FCC say about spread spectrum / frequency hopping devices on the amateur band? And 802.11b takes, what, 83.5MHz of possible bandwidth (with all of its frequency hopping for noise rejection)?

One's mind wanders at the thought!

Not a small task to make a high-speed amateur-band transmission standard which a) would take up a narrow enough of a band to be acceptable, b) transmit enough data to make it feasible, and c) comply with the noncommercial guidelines of typical amateur transmissions.

Food for thought:

http://epix.hazard.net/vemis/tcpip.htm
http://www.symek.com/g/trx.html -- This one talks about a 153Kbps pipe over amateur bands with 75KHz deviation. That's more like it.

Spread spectrum over amateur at high speeds? I don't know...

What do you people think??

Cheers,

Blarg

Give me ambiguity or give me something else.

Hi,

Is there any way to tune an antenna without having to transmit RF? I understand how a dummy load can be used to adjust a transmitter. One of my friends suggested tuning while receiving to maximize volume. That seems to work for ballparking the capacitor settings, but doesn't help with inductor settings. Would putting a switched antenna analyzer between the transceiver, and the tuner work? Transceiver->A/Bswitch A transceiver to tuner, B analyzer to tuner. Some others have told me to use a dummy load, but I don't understand how a load that is resistivie only could be used for antenna tuning. Any help would be greatly appreciated.

My son has received his first QSL card, and I would like to produce a return QSL cheaply on my computer for him. I measured the card received as 3.5 by 5.5 inches. Is this the "standard" size for QSL cards, or do they vary?

Post card stock for the computer can be readily obtained as 4 by 6 or
4.25 by 5.5 inches. I'd like to think I could send 4.25 by 5 inches and
it would be acceptible.

Does anyone know?

Thanks!

-Tom-

Check out http://www.hfradio.org/wb8rcr/ for a good QSL program. The exact size isn't important.

Hello...I'm interested in starting a net (on the radio...not on the
internet) that would discuss oldtime radio drama.  Does anybody here
know if such a net exists?  I've done some searching but so far
nothing.  Would anybody here be interested in participating in such a
net?

I've run across a net before on 7.238 Mhz Sunday mornings at 1300Z,
but I haven't checked recently to see if it is still active.  It is
ORCATS -- Old Time Radio Programs on Tape -- net controlled by W9ZMR.
<http://www.w9zmr.com>.  Maybe it will be what you're looking for.

New program PADMATCH.exe

For given source and load resistances this program designs T, Pi and L
resistive matching pads and attenuators. It has the same facilities as
program MatchPad (which it replaces) but with an extra facility to insert
preferred-value resistors from the various standard tolerance ranges. The
design procedure is used in reverse to predict the in-circuit attenuation
(dB).

First calculate the ideal resistor values of a network. Then replace them
one-by-one with the nearest preferred values and the changed attenuation
will be automatically calculated.

Download program PADMATCH from website below.

For those interested, there is an interesting of Amateur Operations at
the National Hurricane Center and the Hurricane Watch Net. If you
have not had chance to listen to the interview on the R.A.I.N. Report,
let me suggest that you invest a few minutes and make yourself aware
of that information. The season is fast approaching.

The URL is:

http://www.rainreport.com/

The navigation by which to hear the report is a little confusing.

There is a feature article, called "RAIN Feature Story" on the main page of the site.   However, to hear the recorded interview, you must go to the top, left hand side of the page. Under the title "Program Choices" is a selection titled "Present Rain Report." By choosing between a Windows Media Link or RealAudio link brings up the interview in the format of your choice.

The interview will only be available to be heard for only a few more days.

Chuck Rippel
Member of the Hurricane Watch Net

Amateur Radio Newsline Report 1297 - June 21 2002

==

A NOTE TO THOSE WHO ONLY READ AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the spoken word. It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. On site free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

===

Amateur Radio Newsline report number 1296 with a release date of Friday, June 21st 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams down-under face tough new human exposure to R-F regulations and the FCC creates a new Spectrum Policy Taskforce. These stories are first on Amateur Radio Newsline report number 1297 coming your way right now.

(Billboard Cart Here)

**

REGULATORY: VK HAMS FACE NEW MANDATORY RF EXPOSURE LIMITS

Hams in Australia are about to face some of the toughest electromagnetic exposure regulation found anywhere in the world. The idea is to protect people from R-F. Q-News Graham Kemp, VK4BB, has the details:

--

All Australian radio amateurs will be required to know about new Electromagnetic Radiation or EMR controls which are expected to be included in amateur station license conditions from 1 July, 2002. Compliance Level 1 applies to transmitters that are covered by either of these conditions:

(a) The total average power fed to all antennas at the site must not exceed 100 watts and antennas must be out of reach.

(b) The bottom of the lowest antenna must be at least 10 meters above ground and the average EIRP does not exceed 3200 watts.

Compliance Level 2 requires measurements and documented proof of compliance, applies to all other transmitters.

EMR in licence conditions It is proposed that the new regulatory framework, to be reflected in the Licence Condition Determinations -- LCDs -- for the Amateur Service and to all apparatus license will begin on 1 July, 2002. That means that amateur stations operated under new amateur license issued on or after that date, must comply with the framework.

From Q-News Australia, Im Graham Kemp. VK4BB, reporting for the Amateur Radio Newsline.

--

And what about current Australian licensees? They will have until October 1st to bring their stations into compliance with the new R-F exposure rules.
(Q-News)

**

REGULATORY: FCC INVITES COMMENTS ON NEW HAM BAND PROPOSAL

Back on this side of the Pacific our FCC is seeking public comments on a proposal to create two new amateur bands and to upgrade the Amateur Service to that of primary user in the vicinity of 2.4 GHz. An ARRL Bulletin says that if the proposal is approved, amateurs would gain a new, secondary, US-only High Frequency allocation at 5.25 to 5.40 MHz and a new Low Frequency spectral parcel from 135.7 to 137.8 kHz.

The 5 MHz band would be the first new HF allocation since the early 1980s, when amateurs got 30, 17 and 12 meters. The Low Frequency band would be the first ever for US hams. And most important for the long-term future of ham radio U-H-F exploration, the proposal will also elevate Amateur Radio from secondary to primary status in the 2400 to 2402 MHz band.

All of this is contained in a Notice of Proposed Rule Making titled ET Docket 02-98 adopted May 2nd by the FCC. Comments are due July 29, and reply comments are due no later than August 12th. Interested parties can file using the FCC's Electronic Comment Filing System. That U-R-L is http://www.fcc.gov/e-file/ecfs.html . Click on ''Search for Filed Comments'' and enter ''02-98'' in the ''Proceeding'' field. (ARRL)

**

REGULATORY: FCC CREATES SPECTRUM POLICY TASK FORCE

Ham radio is not the only area where the FCC has been active in looking at spectrum usage. In fact the agency has announced the creation of a Spectrum Policy Task Force or S.P.T.F. to tackle the problems arising from an increasing demand for spectrum.

The task force is headed by Dr. Paul Kolodzy. Dr. Kolodzy is the Senior Spectrum Policy Advisor for the FCCs Office of Engineering and Technology. The rest of the committee will be made up of attorneys, economists and even engineers. Its not known whether or not a representative of Amateur Radio or any other personal radio service such as FRS, CB or the new Multi-Use Radio Service will be invited on.

You can find out the complete at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-223142A1.doc (FCC)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Catalina Amateur Radio Association repeater serving the Pacific coastline of Southern California.

(5 sec pause here)

**

REGULATORY: WRC 2003 IS ON AGAIN

The on again and off again 2003 World Radiocommunications conference appears to be on again. According to news reports, the conference which was canceled by Venezuelas telecommunications bureau has been moved to Geneva Switzerland. The dates are the same -- July and August of 2003. The future of mandatory Morse code testing in the Amateur Radio Service is one of the items on the agenda for that meeting. (Published reports)

**

REGULATORY: FCC SAYS NO TO MANDATORY EMP STANDARDS

The FCC has dismissed a petition for rule making that would have required all electronic equipment under its jurisdiction to be shielded against electromagnetic pulse or E-M-P damage. Amateur Radio Newslines Henry Feinberg, K2SSQ, has more:

--

The petition, filed last fall by Don Schellhardt and Nickolas Leggett, N3NL was put on public notice in December and designated as RM-10330. According to the ARRL Letter the proposals would have applied to both new and existing equipment falling within the FCCs purview. And yes: It would have included some Amateur Radio equipment.

Schellhardt is a Connecticut attorney. Leggett is a Washington, D.C. technical consultant. In 1986 the two filed a similar petition with the FCC seeking a Notice of Inquiry on possible shielding of electronics against EMP. They say the September 11th terrorist attacks motivated them to approach the FCC on the topic once again. Once again, the FCC did not agree.

For the Amateur Radio Newsline, Im Henry Feinberg, K2SSQ.
--

The ARRL did not comment on the proposal but fourteen others did. And they were almost unanimous in asking that the petition be dismissed. (ARRL)

**

REGULATORY: FCC-NCVEC MEETING AGENDA ANNOUNCED

The National Conference of Volunteer Examination Coordinators has released the agenda for its annual meeting with the FCC. Among the topics to be discussed are the effect of restructuring on Amateur Radio testing, a report on the status of testing in sparsely populated areas and the status of regulatory and enforcement matters. The gathering is slated for Friday, July 26th in Gettysburg Pennsylvania. (NCVEC)

**

ENFORCEMENT: FINE ISSUED TO BROADCASTER FOR ALLEGED LANGUAGE VIOLATION

The FCC has issued a notice of forfeiture to Infinity Broadcasting Incorporated in the amount of $21,000. The agency says that it is imposing the fine after it concluded that Infinity is apparently liable for the penalty for willfully and repeatedly broadcasting indecent language on three occasions. Infinity is expected to appeal the forfeiture order. (FCC)

**

ENFORCEMENT: FLIPPO IS TRIED IN WEST PALM BEACH

A non-ham who allegedly jammed ham radio communications has been convicted in West Palm Beach Florida on charges of operating a radio transmitter without a license. We have this report.

--

A federal jury in Florida took less than two hours to convict a Jupiter Farms man of broadcasting without a license and maliciously jamming ham radio operations in northern Palm Beach County. According to the Palm Beach Post, 60 year old William Flippo sat with head bowed and eyes closed as court deputy James Caldwell read out eight counts of "guilty."

But getting to this verdict took years of investigation by local hams and the FCC along with a trial that lasted 6 1/2 days. It was described by the newspaper as an often bizarre trial that included testimony about mysterious jamming devices found in trees, strange events going back to Hurricane Andrew and a forged letter that surfaced at the last minute.

Flippos conviction caps years of conflict between him and the Jupiter-Tequesta Repeater Group. This is a 70-member Amateur Radio club whose members claimed that Flippo had jammed their transmissions and had made threats against them.

So club members complained to the Federal Communications Commission. An FCC Engineer involved in the investigation testified that he had tracked the interference to Flippo's home and two of his vehicles. Club members said that the interference stopped when Flippo was arrested in July 2000.

By way of defense, Flippo maintained that most of the radio equipment found in his home, in three of his vehicles and filling a 24-by-24-foot building behind his house belonged to other people. He also asserted that some of it was given to him by Palm Beach County for emergency use after Hurricane Andrew in 1992 and other gear was part of a vintage radio collection.

Flippo also claimed to have a letter, written in 1994 by the emergency coordinator for amateur radio operators in Palm Beach County, authorizing him to test his emergency equipment daily. But the alleged author of the letter, Charles Mulligan, testified that it was a forgery. Mulligan believed it was created from a 1992 letter to Flippo dealing with events surrounding Hurricane Andrew.

And this is where it got even stranger. Halfway through the trial, U.S. District Judge Daniel Hurley took the extraordinary step of revoking Flippos bail. This, even though the charges were all misdemeanors. Hurley ordered Flippo into custody, saying that the defendant was trying to sabotage the trial by feigning illness. Flippo had checked into a hospital, claiming symptoms of a stroke, which delayed the trial for two days.

After the verdict, Judge Hurley ordered Flippo to remain in custody until sentencing and to undergo psychological testing. The judge said he was deeply concerned about the escalating cycle of violence in the case. He singled out an incident in which Flippo rammed into a vehicle owned by club member Ed Petzolt, K1LNC. The judge also questioned whether Flippo had perjured himself by repeatedly denying he ever used amateur radio frequencies.

When he is sentenced, Flippo faces a maximum of 8 years in a Federal prison and an $80,000 fine. This is in addition to an earlier 20,000 fine levied against him back in 1999 for unlicensed operation and other violations of the FCCs rules.

For the Amateur Radio Newsline, Im Don Wilbanks, KC5MFA. Norm.

--

More on the Flippo case in future amateur Radio Newsline reports. (Palm Beach Post, Miami Sun, numerous others.)

**

HAM RADIO POLITICS: I LINK VS. ECHOLINK ROUND 1

Politics appears to be starting to play a part Internet based radio linking. According to Lee Williams, N3APP, a ham considered as being the father of i-Link named Graeme Barnes, M0SCH, has locked out all users running the EchoLink software from his servers. Also, i-Link users have had to download new software to stay on-line.

To counter the eviction, EchoLink proponent Jonathan Taylor, K1RFD, has set up new servers to allow users of that software to have connectivity. At least for those who want it.

Williams says that Barnes and Taylor are cooperating on the connectivity issue but caught in the middle are thousands of hams who do not care which program is in their computer. All they want to do is to talk to one another and they really do not care whose server system their signal is routed through. (N3APP)

**

HAM RADIO POLITICS: ELECTION TIME AT THE NFCC-NFCB

Its election time at the National Frequency Coordinators Council or NFCC. Nominations to fill the seats of expiring National Frequency Coordinators Board Directors opened on June 15th. The closing date for candidate nomination is June 30th., with voting beginning on July 28th. and the election results announced on July 31st. The directors elected this time shall take office effective on the 1st. of September and will serve for two years. The incumbent directors whose terms expire on August 31st are Dave Baughn, KX4I, Dick Isely, W9GIG and Owen Wormser, K6LEW. (ARNewsline)

**

CONVENTIONS AND HAMFESTS: 2003 ARRL NATIONAL IN DALLAS

The 2003 ARRL National Convention is now slated for June 20th through the 23rd at the Arlington Convention Center in the Dallas suburb of Arlington Texas. The national will be a part of Ham Com which is the very popular West Gulf Division convention held every year. More information is on the web at www.hamcom.org. (ARRL)

**

CONVENTIONS AND HAMFESTS: JSAR SHOREFEST AUGUST 11

The Jersey Shore Amateur Radio Society is pleased to announce its 4th Annual ham radio Shorefest . The event is slated for Sunday, August 11th at the Bayville Fire House on Route 9 in Bayville, New Jersey. The hamfest is all indoors in 4,000 square feet of air-conditioned pleasure. More information is in cyberspace at www.jsars.org. For advanced table reservations or tickets contact Bob Reed, W2CE, by e-mail to w2ce@arrl.net. (W2CE)

**

SPACE TECHNOLOGY: SEEING THE SOLAR ECLIPSE WITH MICROWAVE EYES

The June 10th partial solar eclipse attracted quite a bit of attention because the event could easily be seen. However, the sun is also a powerful source of microwave signals, so the eclipse should have been visible in the radio spectrum as well. And thanks to the efforts of Dr. Brian L. Dougherty of Caltech we now have graphs of the solar microwave eclipse.

Dr. Dougherty operates a microwave dish in Californias Owens Valley. That antenna is tied to receivers that records the radio spectrum of the sun every 9.6 seconds, covering roughly 100 frequencies between 1 and 18 GHz. With a bit of data processing, we are all able to see the eclipse in the microwave region your own eyes at http://srbl.caltech.edu/020610.html

There is also a real time Solar Radio Burst Locator during the day to see the sun's microwave events as they take place. Its in cyberspace at http://srbl.caltech.edu. (CGC Communicator)

**

EMERGING TECHNOLOGY: DIGITAL TV ANTI-PIRACY DEADLINE

July 15th. is the deadline set by Representative Billy Tauzin for the Hollywood studios, the computer industry and consumer electronics manufacturers to develop a method to protect digital TV from being pirated onto the Internet. The chairman of the influential House Commerce Committee is growing impatient over the stalled transition to digital TV. He also knows that the switch won't happen until movies and popular TV series can be protected from exposure to cyberspace piracy. If private negotiations fail, Tauzin says that he is prepared to step in and mandate government intervention. (Published news reports)
